"Puffed up with the vanitie and *flattery* of the greate men which were about him."—*Brende: Quintus Curtius*, fo. 21.

flătt´-ĭng, *pr. par., a., & s.* [FLAT, *v.*]

A. & B. *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

I. *Ord. Lang.:* The act or process of making flat or flattening.

II. *Technically:*

1. *Gilding:* A covering of size over gilding.

2. *Glass-making:* The operation of opening out a split cylinder of glass so as to make it flat. This is performed in a Flatting-furnace (q.v., and is assisted by a tool having an iron handle and a wooden cross-piece at the end.

3. *Metall.:* The act or process of rolling out metal into plates or sheets.

4. *Painting:* A style of inside house-painting in which the colours, prepared with oil of turpentine only, are dead, without lustre.

flatting-furnace, *s.*

Glass-making: A furnace in which a split cylinder of glass is opened out. [FLATTING, *s.*, II. 2.]

flatting-hearth, *s.*

Glass-making: The plate on which glass is flatted. It is of devitrified glass, fire-proof clay, sandstone, or other material which will resist heat and maintain the essential perfectly smooth surface.

flatting-mill, *s.*

1. A rolling-mill producing sheet-metal.

2. In the Mint, the rolling-mill for producing the ribbon from which the planchets are punched.

3. A mill having a pair of hard, polished steel rolls, through which grains of metals are passed to be flatted for ornamental purposes. The produce is known as metallic dust.

flatting-plate, *s.* [FLATTING-HEARTH.]

flatting-stone, *s.* [FLATTING-HEARTH.]

flăt´-tĭsh, *a.* [Eng. *flat*; *-ish.*] Somewhat flat; approaching to flatness.

"They have large, *flattish* heads."—*Derham: Physico-Theology*, bk. iv., ch. ii., No. 22.

flăt´-ụ-lẹnçe, flăt´-ụ-lẹn-çÿ, *s.* [Fr. *flatulence*, from Low Lat. *flatulentia*, from *flatulentus* = full of wind, windy, from Lat. *flatus* = a blowing, from *flo* = to blow.]

1. The quality or state of being flatulent, or full of wind or gases generated in the alimentary canal.

"The most sure sign of a deficient perspiration is *flatulency* or wind."—*Arbuthnot: On Aliments*, ch. v.

*2. Emptiness, vanity.

"The natural *flatulency* of that airy scheme of notions."—*Glanvill: Scepsis Scientifica.*

flăt´-ụ-lẹnt, *a.* [Fr., from Low Lat. *flatulentus.*] [FLATULENCE.]

*1. Of the nature of wind.

"The more weighty, gross, and *flatulent* part remaining behind."—*P. Holland: Plutarch*, p. 577.

2. Windy, full of wind or gases generated in the alimentary canal.

2. Full of air or wind.

"*Flatulent* tumours are such as easily yield to the pressure of the finger, but readily return, by their elasticity, to a tumid state again."—*Quincy.*

4. Generating, or liable to generate gases in the alimentary canal; causing wind or flatulence.

"Pease are mild and demulcent; but being full of aerial particles, are *flatulent*, when dissolved by digestion."—*Arbuthnot: On Aliments*, ch. vi.

*5. Empty, vain, pretentious, turgid; without substance or reality.

"He is too *flatulent* sometimes, and sometimes too dry."—*Dryden: Juvenal.* (Dedic.)

*6. Characteristic of empty or vain pretentions.

"To talk of knowledge, from those few indistinct representations which are made to our grosser faculties, is a *flatulent* vanity."—*Glanvill: Scepsis Scientifica.*

***flăt´-ụ-lẹnt-lÿ,** *adv.* [Eng. *flatulent*; *-ly.*] In a flatulent manner; windily; emptily.

* **flăt-u̧-ŏs′-ĭ-tȳ,** *s.* [Fr. *flatuosité*, from Lat. *flatus* = a blowing : *flo* = to blow.] Windiness; fulness of air or wind; flatulence.

"The cause is *flatuosity*; for wind stirred moveth to expel."—*Bacon: Natural History*, § 39.

* **flăt′-u̧-oŭs,** *a.* [Fr. *flatueux*; Ital. & Sp. *flatuoso*, from Lat. *flatus*.]

1. Capable of being blown away; of the nature of wind.

"Drinketh up the moisture, making it more *flatuous* and windy."—*P. Holland: Plutarch*, p. 577.

2. Windy, full of wind, flatulent.

"This *flatuous* crudity is by the heat consumed."—*Venner: Via Recta*, p. 152.

3. Generating wind in the stomach.

"Rhubarb in the stomach, in a small quantity, doth digest and overcome, being not *flatuous* nor loathsome."—*Bacon: Natural History*, § 44.

flăt′-u̧-oŭs-nĕss, *s.* [Eng. *flatuous*; *-ness*.] The quality or state of being flatuous; flatulence, wind.

"They cause fluctuations and *flatuousnesse* in the body."—*Venner: Via Recta*, p. 15.

flā′-tŭs, *s.* [Lat.]

*1. A breath or puff of wind.

2. Wind in the stomach, or other cavities of the body, arising from indigestion; flatulence.

"He was sick of the *flatus*."—*Reliquiæ Wottonianæ*, p. 467.

flăt′-wīșe, *a.* or *adv.* [Eng. *flat*; *-wise*.] With the flat downwards; not edgewise.

"Its posture in the earth was *flatwise*, and parallel to the site of the stratum in which it was reposited."—*Woodward: On Fossils.*

flâucht (*ch* guttural) (1), *s.* [Flaw.]

1. A flight or flock of birds.

"By cam thousan's o' milk white hunds nae bigger nor whittrets, an' souchan as gin they had been a *flaucht* o' dows."—*Edin. Mag.*, Sept. 1818, p. 155.

flā-vē′-dō, *s.* [From Lat. *flavesco* = to become yellow.]

Bot.: A disease in plants which alters their green into a yellow colour. (*Treas. of Bot.*)

fla̧-vĕr′-ĭ-a, *s.* [From Lat. *flavus* = yellow, one of the species being used to dye that colour. (Def.)]

Bot.: The typical genus of the composite sub-tribe Flaverieæ. *Flaveria Contrayerba* grows in Peru, and is used in dying yellow.

fla̧-vĕr′-ĭ-ĕ-æ, *s.pl.* [Mod. Lat. *flaveri(a)*, and Lat. fem. pl. suff. *-eæ*.]

Bot.: A sub-tribe of Senecionideæ.

* **fla̧-vĕs′-çent,** *a.* [Lat. *flavescens*, pr. par. of *flavesco* = to become yellow; incept. from *flavus* = yellow.]

Bot.: Yellowish, becoming yellow.

* **fla̧-vĭc′-ô-moŭs,** *a.* [Lat. *flavus* = yellow; *coma* = hair.] Having yellow hair.

flăv′-ĭn, flăv′-ine, *s.* [Lat. *flav(us)*, and suff. *-in*, *-ine* (*Chem.*) (q.v.).]

1. *Comm.:* A yellow dye-stuff imported from America in the form of a dark-brown powder, said to be identical with Quercitrin (q.v.).

2. *Chem.:* $C_{13}H_{12}N_2O$. An organic base isomeric with diphenyl-carbimide. It is formed by the action of ammonium sulphide on dinitrobenzophenones. It forms pale yellow needles, nearly insoluble in water, soluble in alcohol and ether. Fused with caustic potash, it gives off phenylamine, $NH_2C_6A_5$. (*Watts: Dict. Chem.*)

flā′-voŭr, fla-vor, *s.* [Low Lat. *flavor* = (1) yellow coin, (2) yellow or bright hue, from Lat. *flavus* = yellow.]

I. *Literally:*

*1. A bright hue or colour.

"Nor did the dancing ruby,
Sparkling outpoured, the *flavour* or the smell,
Or taste, that cheers the heart of gods and men,
Allure thee from the cool crystalline stream."
Milton: Sampson Agonistes, 544.

2. That quality in anything which affects the taste.

"It would have affected everything we ate or drank with an importunate repetition of the same *flavour*."—*Paley: Natural Theology*, ch. xxi.

*3. That quality in anything which pleases the smell; odour, fragrance.

"Myrtle, orange, and the blushing rose,
With bending heaps, so nigh their bloom disclose,
Each seems to smell the *flavour* which the other blows."
Dryden: State of Innocence, iii. 3.

II. *Fig.:* An agreeable or gratifying quality or character; zest.

"And gives a pleasant *flavour* to discourse."
Pomfret: The Choice.

¶ For the difference between *flavour* and *taste*, see Taste.

flā′-voŭr, flā′-vŏr, *v.t.* [Flavour, *s.*] To give a flavour to; to communicate some quality of taste or smell to.

flā′-voŭred, flā′-vŏred, *a.* [Eng. *flavour*; *-ed*.] Having that quality which affects the sense of taste or smell; having a distinct flavour.

"Roots or wholesome pulse
Or herbs, or *flavoured* fruits."
Dodsley: Agriculture, c. ii.

flā′-voŭr-lĕss, flā′-vŏr-lĕss, *a.* [Eng. *flavour*; *-less*.] Destitute of or without a flavour.

* **flā′-voŭr-oŭs, flā′-vŏr-oŭs,** *a.* [Eng. *flavour*; *-ous*.]

1. Pleasing to the taste or palate.

"The sumptuous viands and the *flavourous* wine."
Pope: Homer; Odyssey vi. 90.

2. Pleasing to the sense of smell; fragrant, odorous.

* **flā′-voŭs,** *a.* [Lat. *flavus*.] Yellow.

"The membrane itself is somewhat of a *flavous* colour."—*Smith: Portraiture of Old Age* (1666).

flâw, * **flay,** *s.* [Sw. *flaga* = a flaw, a crack; A.S. *floh*; Goth. *flaga* = a fragment.]

I. *Ordinary Language:*

1. A crack or breach in anything; a slight gap or fissure; an imperfection.

"We found it exceeding difficult to keep out the air from getting in at any imperceptible hole or *flaw*."—*Boyle.*

2. A defect or fault caused by violence or neglect.

"Whether the nymph shall break Diana's law,
Or some frail China-jar receive a *flaw*."
Pope: Rape of the Lock, ii. 106.

3. A defect, a fault, which weakens or invalidates that in which it occurs.

"The decree was just, and without *flaw*."
Cowper: Hope, 318.

*4. A fault, or defect in conduct; a failure in obedience.

"From Sinai's top Jehovah gave the law—
Life for obedience—death for every *flaw*."
Cowper: Truth, 550.

*5. A fragment, a piece.

"This heart shall break into a hundred thousand *flaws*
Or ere I weep." *Shakesp.: Lear*, ii. 4.

*6. A flake, as of snow.

*7. A flash, a flame.

"Tille the *flawes* of fyre flawmes one their helmes."
Morte Arthure, 2,555.

*8. A sudden burst or gust of wind.

"And he watched how the veering *flaw* did blow."
Longfellow: Wreck of the Hesperus.

*9. A sudden outburst of noise; a tumult, an uproar.

"Deluges of armies from the town
Came pouring in: I heard the mighty *flaw*;
When first it broke." *Dryden: Aurengzebe*, v. 1.

*10. A storm of passion; commotion of mind; a quarrel.

"Oh! these *flaws* and starts,
Impostors to true fear, would well become
A woman's story at a winter's fire."
Shakesp.: Macbeth, iii. 4.

II. *Technically:*

1. *Weav.:* A bore, tangle, or skip.

2. *Metal:* In casting or forging; a fault, as where the parts of the metal are not fairly joined.

flaw-flower, *s.*

Bot.: *Anemone Pulsatilla.*

flaw-piece, *s.*

Wood: A slab from the outside of the log.

* **flâw,** *v.t.* [Flaw, *s.*]

1. To crack, to break; to damage by causing flaws.

"The cup was *flawed* with such a multitude of little cracks, that it looks like a white, not like a crystalline cup."—*Boyle.*

2. To break, to violate.

"France hath *flawed* the league, and hath attached
Our merchants' goods."
Shakesp.: Henry VIII., i. 1.

3. To find a flaw or defect in.

"My worship needed not to *flaw* his right."
Ford: Lady's Trial, ii. 2.

* **flawe,** *a.* [Lat. *flavus*.] Yellow.

"With liuelish browes, *flawe* of colour pure."
Chaucer: Court of Love.

flâw′-lĕss, *a.* [Eng. *flaw*; *-less*.] Without a flaw; free from flaws, cracks, or defects; perfect.

"The diamond being fair and *flawless*."—*Boyle: Works*, v. 577.

flâwn, * **flaun,** * **flawne,** *s.* [O. Fr. *flaon*, *flan*; Sp. *flaon*; Fr. *flan*.] A sort of custard or pie. Kersey defines it as "a kind of dainty, made of fine flour, eggs, and butter."

"Brede and chese, buters and milk,
Pastees and *flaunes*." *Havelok*, 642.

* **flâw′-tĕr,** *v.t.* [Flaucht, *v.*] To strip off the skin; to pare.

* **flâw′-ȳ,** *a.* [Eng. *flaw*; *-y*.] Full of flaws, defects, or imperfections.

flăx, * **fflax,** * **flex,** * **flexe,** *s.* [A.S. *fleax*; N. H. Ger. *flachs*; M. H. Ger. *vlahs*; O. H. Ger. *flahs*; Dut. *vlas*. Probably from the root *flak* = to weave; cf. Lat. *plecto* = Gr. πλέκω (*plekō*) = to plait, twist, twine, or weave; πλοκή (*plokē*) = a twining, a weaving.]

I. *Ordinary Language:*

1. In the same sense as II.

"The *flax* was bolled."—*Exodus* ix. 31.

2. The fibrous portion of the flax plant prepared for spinning by breaking, scutching, &c.

II. *Technically:*

1. *Bot., Agric., Archæol., &c.:* The English name of the genus Linum (q.v.), and especially of the common flax (q.v.).

2. *Script.:* The rendering of the Hebrew word פִּשְׁתָּה (*pishtah*), which is correctly translated flax.

"With a line of *flax* in his hand."—*Ezekiel* xl. 13.

¶ (1) *Common flax:*

(*a*) *Ord. Lang., Bot., Manufac.: Linum usitatissimum.* It is an annual plant, with alternate, linear-lanceolate leaves, ovate, acuminate, ciliate, three-nerved sepals, many flowered broad cymes, with crenulate petals. It is an escape in England. Its fibre constitutes tow, which is made into yarn, and this again is woven into linen cloth. Dr. Oswald Heer of Zurich, the eminent fossil botanist, about 1783 published a paper *On the History of Flax, and its Culture in Pre-historic Times.* He shows that it has been found among the remains of the oldest pile dwellings in the Swiss Lakes, where neither hemp nor wool has been discovered. He thinks it probable that the lake-dwellers received it from the South of Europe. He alleges that it was cultivated in Egypt about 5,000 years ago. It seems to have been so also in Bible times in Palestine (Joshua ii. 6), though linen was exported from Egypt to the adjacent lands (Ezek. xxvii. 7). For the process of the manufacture, see LINEN. Its seeds are economically valuable. [LINSEED.]

(*b*) *Pharm.:* The meal of the seed is used for poultices; the infusion is demulcent and emollient. The oil, mixed with lime-water, is applied to burns.

(2) *Fairy flax:* [FAIRY].

(3) *New Zealand flax:*

Bot.: Phormium tenax, a plant belonging to the Liliaceæ, and not to the Linaceæ. It has a very tenacious fibre.

(4) *Flax-bush, Flax-lily,* and *Flax-plant* are popular names for *Phormium tenax*, New Zealand flax. [FLAX, ¶ (3).]

(5) *Purging flax:* Dwarf Flax, Mountain Flax (*Linum catharticum*). It is a small annual plant with white flowers, found on heaths and pastures, flowering from June to September. Its leaves are purgative. *Erythræa centaurium* is also known as the Mountain Flax. (*Britten & Holland*, &c.)

(6) *Toad-flax, Yellow Toad-flax:*

Bot.: (1) *Linaria vulgaris;* (2) *Spergula arvensis.* [TOAD.]

(6) *Wild flax:*

Bot.: (1) *Linaria vulgaris;* (2) *Cuscuta Epilinum.* (*Britten & Holland*, &c.)

flax-brake, *s.*

1. A machine for removing the woody and cellular portion of flax from the fibrous. The hemp-brake is substantially similar in its construction, and identical in its purpose.

2. A machine for shortening flax staple to adapt it to be worked by a given class of machines.

flax-cotton, *s.* A substance produced by a process invented by Chevalier Claussen for cottonizing flax, to render it suitable for manufacture, the objects being to expedite the processes of separating the fibre from the cellular and glutinous matters, and then reducing the fibre to a staple which can be readily treated by machinery. The flax-straw is boiled for four hours in a solution of caustic alkali in a stone vessel, by which the extraneous matters are loosened; it is then placed for two hours in a bath slightly acidulated with sulphuric acid. It is then dried and scutched to remove the cellulose. The cottonizing is performed by steeping the fibre in a bath of dilute bicarbonate of soda, and subsequently in an acidulated liquid. The action of the acid and alkali within the flax fibre generates carbonic-acid gas, and has the effect of bursting apart the fibres, which assume a cotton-like appearance. It is then bleached and spun, either mixed or otherwise.

flax-mill, *s.* A mill or place where flax is spun; a manufactory for linen goods.

flax-plant, *s.* [FLAX, ¶ (4).]

flax-puller, *s.* A machine for pulling flax-plants in the field.

flax-scutcher, *s.* [SCUTCHER.]

flax-star, *s.*

Bot.: Lysimachia Linum stellatum.

flax-thrasher, *s.* A kind of thrashing-machine for beating the grain from the bolls of the cured flax-plant.

* **flax-wench,** *s.*

1. A woman who dresses flax.

2. A prostitute.

"My wife's a hobbyhorse; deserves a name
As rank as any *flax-wench.*"
Shakesp.: Winter's Tale, i. 2.

* **flax-wife,** *s.* A woman who spins.

flăx'-cōmb (*b* silent), *s.* [Eng. *flax*, and *comb.*] The instrument with which the flax is drawn for the purpose of cleansing it from the tow and shives; a hackle or heckle.

flăx'-drĕss-ĕr, *s.* [Eng. *flax*, and *dresser.*] One who prepares flax for the spinner by braking and scutching it.

flăx'-drĕss-ĭng, *s.* [Eng. *flax*, and *dressing.*] The act, process, or trade of preparing flax for spinning by braking and scutching it.

* **flăxed,** *a.* [Eng. *flax; -ed.*] Soft and silky like prepared flax; flaxen.

"Her *flaxed* hair crowned with an anadem."
Browne: Britannia's Pastorals, bk. i., s. 4.

flăx'-ẹn, *a.* [Eng. *flax;* suff. *-en* (q.v.).]

1. Made of flax.

"The tolle made of cumes, *flaxen* cords."—*P. Holland: Pliny*, bk. xix. ch. 1.

2. Resembling flax in softness, silkiness, or colour; soft and flowing; light in colour.

"His *flaxen* hair of sunny hue,
Curled closely round his bonnet blue."
Scott: Lady of the Lake, ii. 23.

flaxen-egg, *s.* An addled or abortive egg.

flaxen-haired, *a.* Having long, soft, and silky hair of the colour of flax.

flaxen-headed, *a.* The same as FLAXEN-HAIRED (q.v.).

flăx'-rāiz-ĕr, *s.* [Eng. *flax*, and *raiser.*] One who raises flax.

flăx'-sēēd, *s.* [Eng. *flax*, and *seed.*]

Bot.: (1) The seed of *Linum usitatissimum*, linseed; (2) *Radiola Millegrana.*

flaxseed-mill, *s.* A mill for grinding flaxseed for the more ready abstraction of the oil, generally known as linseed oil. It is usually a coarse grist-mill, but is sometimes of a portable form and size for farm or plantation use, and adapted for other grain and seeds.

flăx'-tāil, *s.* [Eng. *flax*, and *tail.*]

Bot.: Typha latifolia, from the fruiting heads being downy like finely-combed flax. (*Britten & Holland.*)

flăx'-wēēd, *s.* [Eng. *flax*, and *weed.*]

Bot.: Linaria vulgaris. (*Britten & Holland.*)

flăx'-wŏrtz, *s. pl.* [Eng. *flax;* suff. *wort.*]

Bot.: The name given by Lindley to the order Linaceæ (q.v.).

* **flăx'-ȳ,** * **flax-ey,** *a.* [Eng. *flax; -y.*] Resembling flax; of a light or fair colour; flaxen.

"The four colours signify these four virtues. The *flaxey*, having whiteness, appertains to temperance."—*Sandys: Essays* (1634), p. 16.

flāy (1), * **flan,** * **flea,** * **flean,** * **flee,** * **fleen,** * **flen,** * **fley,** *v.t.* [A.S. *flēan;* Icel. *flá;* Sw. *flå;* Dan. *flaae;* Dut. *vlaan, vlaen.*]

I. *Literally:*

1. To strip off the skin from: to skin.

"Hee ought to sheere, not to *flea* his sheepe."—*Ben Jonson: Discoveries.*

2. To pare or take off the surface of.

"Neither should that odious custom be allowed of cutting sceawes, which is *flaying* off the green surface of the ground, to cover their cabins."—*Swift.*

II. *Figuratively:*

1. To torture exceedingly.

* 2. To undress.

"Nay, pr'ythee, despatch: the gentleman is half *flayed* already."—*Shakesp.: Winter's Tale*, iv. 3.

* **flay-flint,** *s.* A skinflint, a miser.

"There lived a *flay-flint* near; we stole his fruit."
Tennyson: Walking to the Mail.

* **flāy** (2), * **flaie,** * **fley** (2), *v.t.* [A.S. *flēgan, flȳgan.*] To put to flight, to frighten, to terrify.

"Many tyme
Flayed be fendes fell fra hyme."
Metrical Homilies, p. 69.

flāy'-ĕr, *s.* [Eng. *flay; -er.*] One who strips off the skin of anything.

"Every fox must yeald his owne skin and haires to the *flayer.*"—*Purchas: Pilgrimage*, bk. ii., ch. xiii. § 1.

* **flayre,** *s.* [FLAIRE, *s.*]

* **flāy'-sŏme,** *a.* [Eng. *flay* (2), v., and suff. *-some.*] Terrifying; frightful.

"And ye mak yer *flaysome* dins till neeght."—*E. Brontë: Wuthering Heights*, ch. ii.

flēa, * **flee** (pl. **flēaẹ,** * **fleen**), *s.* & *a.* [A.S. *flea;* Icel. *flo;* Ger. *floh;* Dut. *vloo*, from the root *plu* = to fly or jump; Sansc. *plu* = to swim, fly, or jump. *Pulex* seems a modification of the same word. (*Skeat.*)]

A. *As substantive:*

I. *Ordinary Language:*

1. *Lit.:* The insect described under II. 1.

* 2. *Fig.:* Anything insignificant.

"After whom is the King of Israel come out? after whom dost thou pursue? after a dead dog, after a *flea?*"—*1 Samuel* xxiv. 14.

II. *Technically:*

1. *Entom.:* A too well-known wingless insect, *Pulex irritans.* Though, as a rule, each species of *Pulex* is parasitic only upon one animal, as *Pulex canis* upon the dog, *P. talpæ* on the mole, and *P. Hirundinis* on the swallow, yet *P. penetrans* is said to be an exception, and to prey on man, the dog, and the cat. If there is no confounding of species, then the presence of a dog or cat in the house can introduce fleas. The female lays in the cracks of floors or such places, a dozen of eggs, white and a little viscous. In favourable weather they hatch in five or six days, giving exit to little footless larvæ, like small worms, first white, then reddish, which roll themselves in a circle or spiral, and move forward in a serpentine manner. In about twelve days they enclose themselves in a small silken shell, and become nymphs. After other twelve they come forth as perfect insects. The last brood of summer continues in the larval state all winter. The flea is encased in armour like a mediæval knight. It can leap thirty times its own height; it can draw with ease eighty times its own weight. A plant [FLEABANE] has been said to destroy it. This can be done more effectually by putting a piece of fur or flannel in the haunts of the insects. In this they take refuge, and can then be detected and killed.

Flemish-school, *s.*

Paint.: This school is highly recommended to the lovers of the art by the invention, or at least the first practice, of painting in oil. It has been generally attributed to John Van Eyck, in the beginning of the fifteenth century, who was, it is said, accustomed to varnish his distemper pictures with a composition of oils, which was pleasing on account of the lustre it gave them. In course of practice he came to mix his colours with oil, instead of water, which rendered them brilliant without the trouble of varnishing. From this and subsequent experiments arose the art of painting in oil. The attention of the Italian painters was soon excited. John of Bruges was the founder of painting as a profession in Flanders. The chief masters of the school were Memling, Weyden, Rubens, Vandyck, Snyders, and the younger Teniers.

***flęs** (1), ***flese,** *s.* [Fleece.]

flĕsh, ***flęs** (2), ***flesce,** ***flesch,** ***fleis,** ***fleisch,** ***flesche,** ***flessh,** ***flesshe,** ***flexs,** *s. & a.* [A.S. *flæsc;* O. S. *flǣsk;* cogn. with Dut. *vleesch;* Dan. & Icel. *flesk* = pork, bacon; Sw. *flǣsk;* Ger. *fleisch;* O. H. Ger. *fleisc.*]

A. *As substantive:*

***I.** *Ordinary Language:*

1. *Literally:*

(1) The animal substance investing the bones and covered by the skin.

"A spirit hath not *flesh* and bones as ye see me have."—*Luke* xxiv. 39.

(2) Animal food, as distinguished from vegetable food; the meat of beasts or fowls, as distinguished from fish.

"With rosted *flesh,* and milk, and wastel brede."
Chaucer: C. T., 147. (Prol.)

(3) The body as distinguished from the soul.

"As if this *flesh,* which walls about our life,
Were brass impregnable."
Shakesp.: Richard II., iii. 2.

2. *Figuratively:*

(1) Animal nature; the human race; humanity.

"The end of all *flesh* is come before me."—*Gen.* vi. 13.

(2) Carnality; corporal appetites or desires.

"Name not religion, for thou lovest the *flesh.*"—*Shakesp.:* 1 *Henry VI.,* i. 1.

(3) A carnal state; worldly disposition.

"The *flesh* lusteth against the spirit, and the spirit lusteth against the *flesh.*"—*Gal.* v. 16.

(4) Human nature or feeling; tenderness.

(5) Used to denote near relationship.

"They twain shall be one *flesh.*"—*Matt.* xix. 5.

II. *Technically:*

1. *Anat.:* A popular rather than a scientific term for the soft portions of the human body, connected internally with the bony skeleton, and enclosed externally by the skin. It is sometimes used a little more specifically for those softer parts excluding the lungs, the stomach, and other organs of the body which have received distinct popular names. In this more limited sense it embodies the muscles, arteries, veins, lymphatic vessels, &c. Sometimes it is used yet more specifically for the several muscles by the alternate contraction and relaxation of which the various functions of the body, such as respiration, locomotion, &c., are performed. When blood separates into the thicker and more watery portions, the former has the same chemical composition as flesh.

2. *Bot.:* The soft parts, as of a fruit or of a succulent leaf.

3. *Theol.:* That which is carnal; that of which the motive power consists in the natural appetites or fleshly properties inherent in man, as distinguished from the grace implanted by the Spirit of God.

"For the *flesh* lusteth against the Spirit, and the Spirit against the flesh, and these are contrary the one to the other."—*Gal.* v. 17.

¶ For the works of the flesh, see Gal. v. 19-21; for the fruit of the Spirit, see verses 22, 23.

4. *Chem.:* The flesh of animals is a complex tissue, made up of striated and non-striated muscular fibre, connective tissue, nerves, blood-vessels, and lymphatics. The flesh of oxen contains 72·5 per cent. of water, 25 of muscular flesh, and 2·5 of fat; the flesh of sheep 73·6 of water, 23·4 of muscular flesh, and 3 of fat. The quantity of ash left by the muscular flesh of oxen is 6·16 per cent., composed chiefly of alkaline and calcium phosphates, with smaller quantities of chloride sulphate and carbonate of sodium. The juice of flesh is reddish and acid, and contains albumin, casein, creatine, creatinine, sarcine, lactic acid, acetic acid, butyric acid, and a red pigment, &c., and alkaline chlorides and phosphates.

B. *As adj.:* Pertaining to flesh; of the nature of flesh.

¶ (1) *A heart of flesh:*

Scrip.: A heart capable of spiritual feeling and tenderness of conscience. (Ezek. xi. 19.)

(2) *After the flesh:*

Scripture:

(*a*) After the manner of man; in a gross or carnal manner.

"If ye live *after the flesh* ye shall die."—*Rom.* viii. 13.

(*b*) In worldly estimation, in the opinion held by worldly men.

"Not many wise men *after the flesh.*"—1 *Cor.* i. 26.

(3) *Flesh and blood:*

(*a*) *Ord. Lang.:* Human nature; man in his corporeal personality.

"As true we are as *flesh and blood* can be."
Shakesp.: Love's Labour's Lost, iv. 3.

(*b*) *Scripture:*

(i.) The body constituted as it now is with liability to corruption.

"*Flesh and blood* cannot inherit the kingdom of God."—1 *Cor.* xv. 50.

(ii.) Human beings; a person or persons.

"I conferred not with *flesh and blood.*"—*Gal.* i. 16, 17.

(4) *In the flesh:*

Scripture:

(*a*) *Lit.:* In the flesh of the individual when he was circumcised in the flesh of the foreskin. (Gen. xvii. 24; cf. also ver. 25.)

(*b*) *Figuratively:*

(i.) In the body; in the present state of existence.

"Nevertheless to abide *in the flesh* is more needful for you."—*Phil.* iii. 4.

(ii.) (*Of the advent of Christ*): Actually as distinguished from figuratively, with bodily as well as spiritual presence.

"Every spirit that confesseth that Jesus Christ is come *in the flesh* is of God."—1 *John* iv. 2.

(iii.) In a carnal or unregenerate state.

"So then they that are *in the flesh* cannot please God."—*Rom.* viii. 8.

(5) *To be made flesh:*

Scrip. (Of Christ): To assume human nature, to become incarnate.

"And the Word was made *flesh* and dwelt among us."—*John* i. 14.

(6) *To be one flesh:*

Script.: To be as if they were one person instead of two; to be united in affection, interest, &c.

"And shall cleave unto his wife, and they shall *be one flesh.*"—*Gen.* ii. 24. (Cf. *Ephes.* v. 31, 32.)

flesh-animals, *s. pl.* Oken's name for Vertebrata. They were called by him also Head-animals.

Ford: 'Tis Pity, &c., iii. 7.

flesh-tints, *s. pl.*

Paint.: The colours which best represent the human body; sometimes termed the carnations, but employed in a more extended sense than this latter term, which better expresses the more delicate portions of the body, as the face, bosom, and hands.

flesh-wound, *s.* A slight wound; a wound which enters no farther than the flesh.

flĕsh, *v.t.* [Flesh, *s.*]

***I.** *Ordinary Language:*

1. To give flesh to, hence to satiate; to glut.

"Shall *flesh* his tooth on every innocent."
Shakesp.: 2 *Henry IV.,* iv. 5.

2. To initiate; to encourage by giving flesh to; to make eager; from the sportsman's practice of giving hawks, dogs, &c., the flesh of the first game they take.

"Every puny swordsman will think him a good tame quarry to enter and *flesh* himself upon."—*Government of the Tongue.*

3. To exercise or use for the first time.

"Full bravely hast thou *fleshd*
Thy maiden sword." *Shakesp.:* 1 *Henry IV.,* v. 4.

1. The trade or business of a butcher.

"The counsale licent him to vse his craft of *fleshary* to outred his pennyworths."—*Aberd. Reg.* (a. 1541), v. 19.

2. A slaughter-house.

"A *flescheuyre*: *carnificium, carnarium, laniatorium.*"—*Cathol. Anglicum.*

flĕsh'-flў, * **flesche-flye,** * **fleisch-flie,** *s.* [Eng. *flesh*, and *fly*.]

I. *Ordinary Language:*

1. *Lit.:* In the same sense as II.

* 2. *Fig.:* One who delights in moral corruption, or who derives pecuniary benefit therefrom; a dissolute man; a seducer.

"Oh! that a verse had power, and could command
Far, far away, these *fleshflies* of the land."
Cowper: Progress of Error, 323, 324.

II. *Entomology:*

1. *Sing.:* The genus Sarcophaga, and specially *Sarcophaga carnaria*, the larva of which feeds on flesh, especially in a decaying state.

2. *Pl.* (*Fleshflies*): The English name often given to the dipterous family Muscidæ, though the larvæ of some inhabit dung instead of decaying flesh. Example, the Blue-bottle, the domestic fly, &c.

"It is a wonderful thing in *fleshflies*, that a flymaggot in five days' space after it is hatched, arrives at its full growth and perfect magnitude."—*Ray: On the Creation.*

* **flĕsh'-fŭl,** *a.* [Eng. *flesh*, and *ful(l)*.] Fat, plump, corpulent, fleshy.

A. *As adjective:*

1. Of or pertaining to the flesh; corporeal.

"Now rankleth in this same fraile *fleshly* mould."
Spenser: F. Q., III. ii. 39.

2. Human, not celestial or spiritual.

"Much ostentation vain of *fleshly* arm
And fragile arms, much instrument of war,
Before mine eyes thou hast set."
Milton: P. R., iii. 387.

3. Animal; not vegetable.

"If men with *fleshly* morsels must be fed."
Dryden: Ovid; Metamorphoses x.

4. Carnal, lascivious, worldly.

"Belial, the dissolutest spirit that fell,
The sensualest; and, after Asmodai,

* **flĕsh'-mẹnt,** *s.* [Eng. *flesh*; *-ment*.] Eagerness gained by a successful initiation or beginning.

"[He] in the *fleshment* of this dread exploit,
Drew on me here again." *Shakesp.: Lear*, ii. 2.

* **flĕsh'-mŏn-gẽr,** *s.* [Eng. *flesh*, and *monger*.] One who deals in flesh; a procurer, a pimp, a fornicator.

"Was the duke a *fleshmonger*, a fool, and a coward, as you then reported him?"—*Shakesp.: Measure for Measure*, v. 1.

* **flĕsh'-pŏt,** * **flesh-potte,** *s.* [Eng. *flesh*, and *pot*.] A pot or vessel in which flesh is cooked; hence, used for plenty of food or provisions.

"When we sat by the *fleshpots*, and when we did eat bread to the full."—*Exodus* xvi. 3.

* **flĕsh'-quāke,** *s.* [Eng. *flesh*, and *quake*.] A quaking or shaking of the body.

"They may, blood-shaken then,
Feel such a *fleshquake* to possess their powers."
Ben Jonson: New Inn. (*Ode to Himself.*)

flĕsh'-wŏrm, *s.* [Eng. *flesh*, and *worm*.] A maggot, the flesh-feeding larva of a dipterous or other insect, as the maggot and the blowfly.

¶ When the sebaceous follicles around the nose are clogged or inflamed constituting the disease *Acne follicularis* (q.v.), they sometimes contain a small arachnidan (spider) of low organisation, called in England the maggot-pimple, or in Latin *Demodex folliculorum* [DEMODEX.] It is not generally called a flesh-worm.

flĕsh'-ў, *a.* [Eng. *flesh*; *-y*.]

I. *Ordinary Language:*

1. *Literally:*

(1) Full of flesh; fat, plump, corpulent, gross.

"Galley-slaves are fat and *fleshie* because they stirre the limbs more, and the inward parts less."—*Bacon: Nat. Hist.*, § 877.

(2) Full of pulp; pulpous, plump. (Said of fruit.)

"Those fruits that are so *fleshy* as they cannot make drink by expression, yet they make drink by mixture of water."—*Bacon.*

(3) Consisting of flesh; fleshly, corporeal.

"Neither would they make to themselves *fleshy* hearts for stony."—*Ecclus.* xvii. 16.

* 2. *Fig.:* Puffed, inflated.

"We say it is a *fleshy* stile when there is much periphrases and circuit of words, and when with more than enough it grows fat and corpulent."—*Ben Jonson: Discoveries.*

II. *Technically:*

1. *Zool.:* Having an abundance of soft flesh-like substance within a thin integument instead of being encased in a horny or calcareous envelope.

2. *Bot.:* Firm, juicy, easily cut. (*Lindley.*)

fleshy-leaf, *s.*

Bot.: A leaf which is thick, juicy, and easily cut. Examples, the leaves of the Cactus, the House-leek, Pinguicula, &c.

fleshy-polypes, *s. pl.*

Zool.: The polypes of the genus Actinia and its allies.

flĕt, *pa. par.* or *a.* [FLEET, *v.*]

A. *As pa. par.:* (See the verb).

B. *As adj.:* Skimmed.

"They drink *flet* milk, which they just warm."
Mortimer: Husbandry.

flĕt, fleat, *s.* [Ger. *flechten* = to plait.] A mat of plaited straw for protecting a horse's back from injury by the load.

"The horse being equipped with *a fleat* and club-bar on his back, the former a web made of straw, weaved with small ropes made of rushes, three feet by two and a half, and three-quarters of an inch thick."—*Agr. Surv. Sutherl.*, p. 60.

* **flĕtçh,** *v.t.* [Fr. *flèche* = an arrow.] [FLETCHER.] To feather, as an arrow; to fledge.

"Soft as the feathers that they're *fletch'd* withall."
Cowley: Davideis, ii.

* **flĕtçh'-ẽr,** * **flec-chere,** * **flec-chour,** *s.* [O. Fr. *flechier*, from *flèche* = an arrow; Sp. *flecha*; Port. *flecha, frecha*.] Properly, the man who made and set the feathers on arrows (the arrows themselves being made by the arrowsmiths), but commonly used for a maker of bows and arrows.

"Fierrers, *flecchours*, fele men of crafte."
Destruction of Troy, 1,593.

* **flēte,** *v.i.* [FLEET, *v.*]

flĕth'-ẽr, *s.* [FLETHER, *v.*] Flattery, fair words, coaxing, wheedling.

"No, never! What! do ye think to beguile me' wi' your fleething and your *fethers* to do the devil's work?"—*Young South Country Weaver*, p. 98.

flĕth'-ẽr, *v.i. & t.* [Icel. *flárædhr* = false, deceitful: *fledha* = a deceitful, wheedling person.]

A. *Intrans.:* To flatter.

"Expect na, Sir, in this narration,
A fleething, *fleth'rin* dedication."
Burns: Dedication.

B. *Trans.:* To coax or wheedle by flattery or fair words.

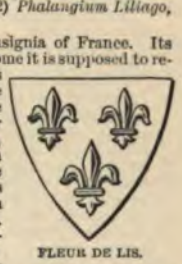
* **flē-tĭf'-ẽr-oŭs,** *a.* [Lat. *fletifer*, from *fletus* = weeping; *fero* = to bear, bring., and Eng. suff. *-ous*.] Producing or causing tears.

flĕtz, *a.* [Ger. *flötz*.] [FLOETZ.]

flēur dẹ lĭs (*s* silent), *s.* [Fr. = flower of the lily.]

1. *Bot.:* (1) Various species of the genus Iris [FLAG (2), IRIS]; (2) *Phalangium Liliago*, a liliaceous plant.

2. *Her.:* The royal insignia of France. Its origin is disputed; by some it is supposed to represent a lily, by others the iron head of some weapon. In the old time the French royal banner was *sémé* of *lys*, that is, completely covered with *fleur-de-lis*; but from the time of Charles VI. it has consisted of three golden *fleur-de-lis* on a blue field. It is of frequent occurrence in English armoury. From the claims invariably put forth by English sovereigns to certain principalities in France, gained by inheritance or marriage, the French royal coat appeared as a quartering in the English royal arms; and although all such claims had long ceased to be enforced or justified, it remained until the accession of George IV., by whom it was abolished.



FLEUR DE LIS.

flēur'-oń, *s.* [Fr.]

Art: The French term for the graceful honeysuckle pattern in Greek art.

fleûr´-ȳ, *a.* [Fr. *fleur*; Eng. adj. suff. *-y*.]
Her.: Applied to an object adorned with *fleur-de-lis*.

flew (**ew** as **ū**), *pret. of v.* [Fly.]

* **flĕx**, *v.t.* [Lat. *flexus*, pa. par. of *flecto* = to bend.] To bend: as, A muscle *flexes* the arm.

* **flĕx-ăn´-ĭ-moŭs**, *a.* [Lat. *flexanimus*, from *flecto*, pa. par. *flexus* = to bend, and *animus* = the mind.] Having power to bend or change the disposition of the mind.

"The most rhetoricall, patheticall, *flexanimous* encomiums."—*Prynne: 1 Histrio-Mastix*, vi. 3.

* **flĕxed**, *a.* [Lat. *flexus*, pa. par. of *flecto* = to bend.] Bent; as, a limb in a *flexed* position.

flĕx-ĭ-bĭl´-ĭ-tȳ, *s.* [Fr. *flexibilité*, from Lat. *flexibilis* = easily bent, flexible (q.v.).]

1. The quality or state of being flexible or admitting to be bent; pliancy; flexibleness.

"Corpuscles of the same set agree in everything, but those that are of diverse kinds differ in specific gravity, in hardness, and in *flexibility*, as in bigness and figure."—*Woodward: On Fossils*.

2. Readiness or willingness to be persuaded, or to yield to argument, persuasion, or circumstances; facility or ductility of mind or disposition.

"Godolphin had been bred a page at Whitehall, and had early acquired all the *flexibility* and the self-possession of a veteran courtier."—*Macaulay: Hist. Eng.*, ch. ii.

flĕx´-ĭ-ble, *a.* [Fr. *flexible*, from Lat. *flexibilis*, from *flexus*, pa. par. of *flecto* = to bend.]

1. Possible to be bent; pliant, easily bent; not stiff or brittle.

"Supple and *flexible* as Indian cane."
Cowper: Hope, 602.

2. Willing or ready to yield to arguments, persuasion, or circumstances; pliant, tractable, facile, ductile; not obstinate or inexorable.

"Seeing him of a nature *flexible* and weak."
Daniel: Civil Wars, bk. i.

3. Manageable, tractable.

"Under whose care soever a child is put to be taught, during the tender and *flexible* years of his life, it should be one who thinks Latin and language the least part of education."—*Locke: On Education*.

4. That may be adapted or accommodated to any purpose.

"This was a principle more *flexible* to their purpose."—*Rogers*.

5. Capable of being moulded into different forms or styles; plastic: as, a *flexible* language.

¶ Crabb thus discriminates between *flexible*, *pliable*, *pliant*, and *supple*: "*Flexible* is used in a natural or moral sense; *pliable* in the familiar and natural sense only; *pliant* in the higher and moral application only: what can be bent in any degree as a stick is *flexible*; what can be bent as wax, or folded like cloth, is *pliable*. *Supple*, whether in a proper or a figurative sense, is an excess of *pliability*; what can be bent backward and forward, like ozier twig, is supple. In the moral application, *flexible* is indefinite both in degree and application; it may be greater or less in point of degree: whereas *pliant* supposes a great degree of *pliability*; and *suppleness*, a great degree of *pliancy* or *pliability*: it applies likewise to the outward actions, to the temper, the resolution, or the principles; but *pliancy* is applied to the principles, or the conduct dependent upon those principles; *suppleness* to the outward actions and behaviour only. A good-natured man is *flexible*; a weak and thoughtless man is *pliant*; a parasite is *supple*. *Flexibility* is opposed to firmness; *pliancy* to steadiness; *suppleness* to rigidity." (*Crabb: Eng. Synon.*)

flexible-binding, *s.*
Bookbind.: A book sewn on bands raised above the back of the folded sheets, so as to allow them to open more freely. The sewing-thread passes around the bands.

flexible-collodion, *s.*
Pharm.: A mixture of 6 fluid ounces of collodion, 120 grains of Canada balsam, and a fluid drachm of castor-oil. It is a better protective covering for the skin than collodion, as it does not crack. [Collodion.]

flexible-coupling, *s.* A form of coupling used for conveying power from one shaft to another when they are not in line. It is a spiral steel band attached at its opposite ends to the two shafts to be connected. The diameter of the spiral is larger than that of the shaft, and the attachment consists of a cast-iron cap.

flexible-shafting, *s.*
Mech.: A shaft of steel so tempered as to admit of its being bent to a sharp curve, retaining, at the same time, its power of communicating motion, thus obviating the use of bevel gear, flexible couplings, or universal joints.

flexible silver-ore, *s.*
Min.: The same as Sternbergite (q.v.).

flĕx´-ĭ-ble-nĕss, *s.* [Eng. *flexible*; *-ness*.]

1. The quality of being flexible, or possible to be bent; pliancy; flexibility.

"These slender aerial bodies, by reason of their *flexibleness* and weight, would flag or curl."—*Boyle: Works*, i. 12.

2. Readiness or willingness to yield to argument, persuasion, or circumstances; pliancy, tractableness, ductility, facility.

"The *flexibleness* of the former part of a man's age, not yet grown up to be headstrong, makes it more governable."—*Locke*.

flĕx´-ĭ-blȳ, *adv.* [Eng. *flexib(le)*; *-ly*.] In a flexible, pliant, or ductile manner.

flĕx-ĭ-cŏs´-tāte, *a.* [Lat. *flexus* = bent, and *costa* = a rib.] Having the ribs bent or curved.

flint, *s.* [A.S. *flint* = a rock; cogn. with Dan. *flint*; Sw. *flinta*; Gr. πλίνθος (*plinthos*) = a brick.]

A. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

(1) *Gen.:* In the same sense as II.

(1) *Spec.:* A piece of the mineral described under II. 1; used before the invention of percussion caps to strike fire with steel in the lock of a musket.

2. *Fig.:* Anything extremely hard; extreme hardness.

"Throw my heart
Against the *flint* and hardness of my fault."
Shakesp.: Antony & Cleopatra, iv. 9.

II. *Technically:*

1. *Min.:* A crypto-crystalline variety of quartz. It is usually grey, smoke-brown, or brownish black. If derived, as it mostly is, from the cretaceous formation, the white of the chalk is still seen on its external surface. Lustre subvitreous; fracture conchoidal, leaving a cutting edge.

2. *Geol. & Palæont.:* Most of the flints scattered on the surface of the ground or existing in tertiary or more recent sedimentary deposits, came originally from the cretaceous rocks, one division of which is termed Upper White Chalk with flints, this being distinguished from the Lower White Chalk without flints. Next to the Maestricht beds and Faxoe limestone [Faxoe, Maestricht], the chalk with flints constitutes the highest or newest layer yet discovered of the sedimentary rocks. The flints are in interstratified layers a few inches thick, these being sometimes continuous, but more frequently in separate nodules. They recur at intervals from each other of about four feet. They are thus formed: Small plants and animals when decomposing, draw to themselves the silica of the sea [Silica], and form concretions around them of inorganic flint. The organic portion of flint pebbles consists of diatoms, seaweeds of low organization, the minute infusorial animals called polycistina, the spicules of sponges, with echinoderms, &c. They are the same as those in agate and chalk.

B. *As adj.:* Made or composed of flints, or in any way pertaining to flints.

"Rough *flint* walls are decked with shells and ores."
Scott: Epistle i.; *The Garden.*

(1) *Liquor of flints:*

2. *Fig.:* Having an exceedingly hard edge.

flint-flake, *s.*

Geol. & Archæol. (*Generally pl.*): The name given by Mr. Evans, F.R.S., to one class of flint implements made by man in the Stone Age. They are flat pieces of flint broken off artificially. The larger ones were intended apparently for knives, and the smaller ones for arrow-heads. [Flake, Flint-implements.]

"My quest" [in the Langley cutting, near West Drayton station, on the Great Western Railway] "was for relics of primæval man, and I was rewarded by finding not only several *flint-flakes*, but the butt end of a massive implement broken in palæolithic times."—*Worthington G. Smith*, in *Nature*, July 27, 1882.

flint-glass, *s.* [Flintglass.]

* **flint-heart**, * **flint-hearted**, *a.* Having an exceedingly hard or cruel heart; hard-hearted.

"Oh pity, 'gan she cry, *flint-hearted* boy."
Shakesp.: Venus & Adonis, 95.

flint-implements, *s.*

Geol. & Archæol.: A generic term used for any implements of flint obtained from pleistocene or more recent deposits, each being afterwards designed more specifically as its exact nature becomes understood. Mr. Evans, F.R.S., &c., divides the implements into three classes—spear-heads, oval or almond-shaped flint implements, and flint-flakes (q.v.). Such relics of early man had been found with the bones of an elephant, in 1715, in the gravel of London. Similar remains were exhumed at Hoxne, near Diss, in 1797, by Mr. John Frere, who described them in a paper read in 1801 before the Society of Antiquaries. About A.D. 1833 or 1834, the Rev. Mr. McEnery, a Roman Catholic priest, discovered similar ones in Kent's Hole, Torquay, of which he was the first scientific explorer, and Dr. Schmerling others in the Engis, the Engihoul, and other caves near Liège, in Belgium. From about A.D. 1841, M. Boucher de Perthes, of Abbeville, collected flint implements from the valley of the Somme, publishing the result in his *Antiquités Celtiques*, in 1847. He asserted the antiquity of the implements which McEnery had suspected and Schmerling maintained. No attention was paid to his views till 1858, when Dr. Falconer visited him at Abbeville, just after he had become satisfied that similar relics which he had examined in connection with the scientific exploration of Brixham Cave, in Devonshire, carried back the antiquity of man to a period when the *Hyæna spelæa*, the *Elephas primigenius*, the *Rhinoceros tichorinus*, &c., inhabited Britain. Mr. Prestwich, with Mr. John Evans, in June, 1858, and the former naturalist again with Mr. Flower, in 1859, examined the Valley of the Somme, and procured for the views of Perthes the assent of the scientific world. Many flint-implements have been found in the south and east of England, in Bedfordshire, in Suffolk, Hampshire, Wiltshire, and in the north and north-east of London, in Essex, in Buckinghamshire, &c. The oldest ones are palæolithic, and are unpolished; the newer neolithic and are polished. The implements from the Somme are of the former kind, and are the oldest known. According to Professor Boyd Dawkins, the river-drift man inhabiting the valleys of the Somme, the Thames, &c., was older than the cave man of Brixham, Kent's Hole, and other caverns. The former lived in the middle part of the Pleistocene (Lyell's Upper Pliocene) period and inhabited Palestine, India, and North America, as well as Europe. The Abbé Bourgeois has found in Mid-miocene strata at Thenay certain split flints, some of them bearing traces of fire. He, with M. Mortillet, Dr. Hamy, MM. Quatrefages, Worsae, and Capellini, believes in a Miocene man, or man-like creature. Mr. Grant Allen thinks that the genus Homo began in the Miocene with a more ape-like species than that existing now. (*Fortnightly Review*, xxxii. (1882), 308–322.)

flint-lock, *s.* The old-fashioned lock for fire-arms, in which the cock held a piece of flint, and came glancing down upon the steel cap of the pan which contained the priming. Flint-locks were invented early in the seventeenth century, and gradually superseded the match-lock. Pyrites or marcasite was also used.

flint-mill, *s.*

1. *Pottery:* A mill in which burnt flints, having been previously stamped to reduce them below a certain size, are ground to powder for mixing with clay to form slip for porcelain. The flint-mill is a strong circular pan ten or twelve feet in diameter, having a bottom of quartz or felspar blocks, and a runner or runners of hard siliceous stone, called chert, lime in any form being inadmissible, as it forms a flux for the other material which would vitrify in the seggars or become blistered by the escape of carbonic acid.

2. *Mining:* A mode formerly adopted for lighting mines, in which flints studded on the surface of a wheel were made to strike against a steel, and give a quick succession of sparks to light the miner at his work. Sparks will not inflame the fire-damp.

flint-rope, *s.*

Zool.: A popular name for the stem of the sponge called *Hyalonema Sieboldii.*

flint-stone, *s.* A stone composed of flint or as hard as that mineral.

"And the earth becomes as *flint-stone*."
Longfellow: Song of Hiawatha, xxi.

flint-ware, *s.*

Pottery: A superior kind of earthenware into whose composition ground flint largely enters. [Porcelain.]

flint-worker, *s.*

Anthropology:

1. A term applied to those men of the palæo-

lithic period, who fashioned the flint implements found in the drift.

"Such an operation would be called into use in many operations of the old *flint-workers*."—*Wilson: Prehistoric Man*, ch. iii.

2. A man of any savage race that has not yet emerged from the Stone period and attained a knowledge of the use of metals.

"Certain classes of implements common to all the Stone periods of which we have any trace, from the palæolithic era of the drift and cave men to that of the *flint-workers* among savage tribes of our own day." —*Wilson: Prehistoric Man*, ch. iii.

flint'-glass, *s.* [Eng. *flint*, and *glass*.] A species of glass made of white sand, 52; carbonate of potash, 14; oxide of lead, 33; alumina, 1; with metallic additions to neutralize colour. Pure white sand free from oxide of iron is required for flint-glass, as iron imparts a green colour. The articles are made by the agency of the blow-pipe, or ponty, the mould and press, and frequently by a combination of blowing and pressing. The silica for its manufacture was formerly derived from pulverised flints, and hence its name. The presence of lead gives it a peculiar property of refracting light, which causes it to be used for lenses, and it forms one of the parts in achromatic compound lenses. Flintglass fuses at a lower temperature than ordinary glass, such as crown, plate, or window glass. It has also less colour, owing to the use of the alkali potash, instead of soda, the latter imparting a greenish tinge to glass. Flintglass is softer than some other varieties, and is the kind which is cut. It is much used for tumblers and other drinking-vessels, fine table-ware, and bottles, and various articles of decorative furniture and fittings.

flint'-ĭ-nĕss, *s.* [Eng. *flinty*; *-ness*.] The quality or state of being flinty; hard-heartedness, cruelty.

flint'-ў, *a.* [Eng. *flint*; *-y*.]

I. *Literally:*

1. Consisting or composed of flint; of the nature of flint.

Sudden his steed the leader reined."
Scott: Lady of the Lake, v. 19.

II. *Fig.:* Hard like flint; hard-hearted, cruel, inexorable, pitiless.

"The *flinty* heart and griping hand of base self-interest."—*Burke: Thoughts & Details on Scarcity.*

flinty-slate, † flinty-rock, *s.*

Petrol.: Siliceous schist. A hard, slaty, metamorphic rock; grey, bluish grey, or red, of dull or glimmering lustre, and translucent on the edges. It contains about 75 per cent. of silica, the remaining 25 being lime, magnesia, and oxide of iron. It occurs in Scotland, in the Pentland and Muirfoot hills, the Isle of Skye, &c., and abroad in Saxony, Bohemia, &c. [BASANITE, LYDIAN STONE.]

flip, *v.t.* [An attenuated form of *flap* (q.v.).]

1. To flick.

2. To jerk, to throw with a jerk.

"Doe 'twixt their fingers *flip* their cherry stones."

"Diseased with the bluddy *flixe.*"—*Udal: Matt.* ix.

***flix** (2), *s.* [Allied to *flax* or *flox* (q.v.).] The down of animals.

"No locks Coromandel's, none Malacca's tribe
Adorn: but sleek of *flix.*"
Dyer: The Fleece, bk. i.

flix'-wēēd, *s.* [O. Eng. *flix*=flux, and *weed.* So called because it was once believed that its seeds drunk with wine or water from a smith's forge stopped the bloody flux (dysentery).]

Bot.: Sisymbrium Sophia, a kind of hedge mustard. It is a cruciferous plant with pinnatifid leaves and yellow flowers, found in waste places here and abroad. It is called also Flixwort (q.v.).

flix'-wŏrt, *s.* [O. Eng. *flix* = flux, and *wort.*]

Bot.: The same as FLIXWEED (q.v.).

***flo, fla-** *s.* [A.S. *flā.*] An arrow.

"His bowe he bent and set therein a *flo.*"
Chaucer: C. T., 17,196.

flōat, *fleote, *flot, *flote, *s.* [A.S. *flota* = a ship; Icel. *floti* = a float, a raft; Sw. *flotta;* Dan. *vlot;* Ger. *floss.*] [FLOAT, *v.*]

I. *Ordinary Language:*

1. The act of floating or swimming.

"God tagte ilc fis on water his *floteo* migt."
Genesis & Exodus, 161.

2. The act of flowing; flux; flow.

"There is some disposition of bodies to rotation, particularly from East to West; of which kind we conceive the main *float* and refloat of the sea is, which is by consent of the universe, as part of the diurnal motion."—*Bacon: Natural History.*

3. Any thing or body designed or constructed so as to float.

* (1) A ship.

"There he made a litel cote
To him and to his *flote.*" *Havelok,* 737.

* (2) Ships collectively; a fleet.

"Hamber king and al his *flote.*" *Layamon,* i. 91.

(3) In angling, the quill or cork from which the bait line is suspended, and whose motion indicates the bite of a fish.

"Casting a little of it into the place where your *float* swims."—*Walton: Angler.*

(4) An inflated bag or pillow to sustain a person in the water.

(5) The small piece of ivory on the surface of the mercury in the basin of a barometer.

(6) The hollow, metallic ball of a self-acting faucet, which floats upon the water in the cistern or boiler. [BALL-COCK.]

(7) A raft, or collection of timber fastened together for conveyance down a river.

*4. A wave; the sea.

"They are upon the Mediterranean *float.*"
Shakesp.: Tempest, i. 2.

*5. A quantity of earth.

"Banks are measured by the *float* or floor, which is eighteen foot square and one deep."—*Mortimer: Husbandry.*

6. A sort of dray, for the conveyance of heavy goods, having the body hung below the axle.

II. *Technically:*

1. *Hydr. Eng.:* One of the boards or paddles attached to the radial arms of a paddle-wheel or water-wheel.

2. *Mach.:* A single-cut file, or one in which the teeth are parallel and unbroken by a second row of crossing teeth. The usual horizontal obliquity of the teeth relatively to the central line of files is 55°, but single-cut files are much less inclined, and the teeth of floats are sometimes square across the face of the file.

3. *Plastering:* A plasterer's trowel used in spreading or floating the plaster on to a wall or other surface. The long-float is of such a length as to require two men to use it. The hand-float is that in ordinary use. The quirk-float is used in finishing mouldings. An angle-float is shaped to fit the angle formed by the walls of a room.

4. *Mason.:* A polishing-block used in marble-working; a runner.

5. *Shoe-making:* The serrated plate used by shoemakers for rasping off the ends of the pegs inside the boot or shoe.

6. *Tempering:* A contrivance for affording a copious stream of water to the heated steel surface of an object of large bulk, such as an anvil or die in the process of tempering. The rapid production of steam prevents the constant contact of cold water when the object is merely dipped, as a body of steam intervenes. The dashing stream of water constantly exposes a new body of water to the hot surface, and makes the hardening more complete.

7. *Theat.:* A stage-name for the footlights, derived from the use of a row of oil-pans, with floating wicks, along the stage-front, previous to the invention of gas.

* ¶ (1) *On* or *upon the float:* In motion; not fixed; on the move.

"Our ideas being perpetually *upon the float.*"—*Search: Light of Nature:* vol. i., pt. ii., ch. xvi.

float-board, *s.* One of the boards of an undershot water-wheel or of a paddle-wheel.

float-case, *s.*

Hydr. Eng.: A caisson to be attached to a submerged ship or other body, to float it by the expulsion of water and substitution of air in the case.

float-copper, *s.*

Min.: Fine scales of metallic copper (especially produced by abrasion in stamping), which do not readily settle in water.

float-gold, *s.*

Min.: Gold, so finely crushed, that it remains in suspension in the water, and hence is liable to be lost in the ordinary stamp-mill process.

"Compels the *float-gold* and other finely divided gold to enter into a created vortex of water."—*Daily Telegraph,* Sept. 15, 1882.

float-grass, *s.* [FLOTE-GRASS.]

float-ore, *s.*

Min.: Water-worn particles of ore; fragments of vein-material found on the surface away from the vein outcrop.

float-stone, *s.*

Min.: A variety of opal. It is of spongy texture, and it is in consequence so light that it floats on water.

float-valve, *s.* A valve actuated by a float so as to open or close the port, according to the level of the liquid in the chamber where the float is placed. It is the equivalent of a Ball-cock (q.v.).

flōat, *flote, *flotie, *v.i. & t.* [A.S. *flotian;* Dut. *vlotten;* O. H. Ger. *flozzan;* Icel. *flota.*] [FLOAT, *s.*]

A. *Intransitive:*

1. To swim on the surface of a liquid; to rest upon the surface without sinking.

"Was graceful, when it pleased him, smooth and still
As the mute swan that *floats* down the stream."
Wordsworth: Excursion, bk. vi.

*2. To swim in a liquid.

3. To move or glide without apparent effort, as if buoyed up in a fluid.

"What divine monsters, O ye gods, were these,
That *float* in air, and fly upon the seas!"
Dryden: Indian Emperor, i. 2.

4. To pass or flow over, as a liquid.

"The river Atax, springing out of Pyrenæus, runneth through the lake Rubresus, and *floteth* over it."—*P. Holland: Plinie,* bk. iii., ch. iv.

1. The act or state of floating.

2. The science of floating bodies.

"We made some experiments in *flotation.*"—*Macmillan's Magazine,* Oct. 1881, p. 422.

¶ (1) *Plane* or *line of flotation:* The plane or line in which the horizontal surface of a fluid cuts a body floating in it.

(2) *Stable flotation:* The floating of a body in such a way that it cannot easily be overturned. This stability arises when the metacentre is just over the centre of gravity.

flōt′-a-tĭve, *a.* [Eng. *float; -ative.*] Capable of floating; having floating power.

"So that the jacket may have sufficient *flotative* power to carry its load."—*Knight: Dict. of Mechanics;* s.v. *Floating-dock.*

* **flōte** (1), *v.t.* [FLOAT, *v.*]

flōte (2), *v.t.* [FLEET, *v.*] To skim.

"Such cheeses, good Cisley, ye *floted* too nigh." *Tusser.*

* **flōte** (1), * **flō′-tĕr,** * **float-er,** *s.* [FLOAT, *s.*] The same as FLOAT, *s.,* and FLOATER, *s.* (q.v.).

Bot.: A grass. (1) *Glyceria fluitans,* (2) *Alopecurus geniculatus,* (3) *Poa aquatica.*

* **flōte** (2), *s.* A crowd or gathering of people; a company.

"Hatz feryed thyder hys fayre *flote.*" *Early Eng. Allit. Poems: Pearl,* 944.

* **flōt′-ĕr-ÿ,** *a.* [FLOATERY.]

flō-tĭl′-la, *s.* [Sp., dimin. of *flota* = a fleet (q.v.).] A little fleet; a fleet of small vessels.

flŏt′-sam, flŏt′-sôn, *s.* [Eng. *float,* and suff. *-some.*]

Law: A term applied to goods lost in shipwreck, and left floating on the waves. Such goods belong to the Crown, or its nominee, if no owner appears within a year and a day after it has been taken possession of. [JETSAM.]

"*Flotsam* is where goods continue swimming on the surface of the waves."—*Blackstone: Comment.,* bk. i., ch. 8.

* **flotte,** *v.i.* [FLOAT, *v.*]

* **flŏt′-ten,** *pa. par.* or *a.* [FLOTE (2), *v.*] Skimmed, as milk.

* **flot-ter,** *v.i.* [FLUTTER.]

flounçe (1), *v.i.* & *t.* [Sw. dial. *flunsa* = to dip, plunge.]

A. *Intrans.:* To plunge, dash, or throw oneself about; to make violent or rapid movements of the limbs; to struggle, to flounder.

"And flies aloft, and *flounces* round the pool." *Thomson: Spring,* 432.

* **B.** *Trans.:* To throw violently.

"He is *flounced* thence into the sea."—*Smith: Lives of Highwaymen,* ii. 321.

flounçe (1), *s.* [FLOUNCE (1), *v.*] A sudden jerking movement of the body or limbs; a plunging or floundering about.

flounçe (2), *v.t.* [FLOUNCE (2), *s.*] To deck out or adorn with flounces; to attach flounces to.

"She was *flounced* and furbelowed from head to foot; every ribbon was crinkled, and every part of her garments in curl."—*Addison: Spectator.*

flounçe (2), *s.* [Formed by change of *r* to *l,* from Mid. Eng. *frounce* = a plait or wrinkle, from O. F. *froncer, fronser* = to plait, fold, wrinkle.] [FROUNCE.] A narrow piece or slip of cloth sewed to a petticoat, dress, &c., with the lower border hanging loose and spreading.

"But thou, vain man, beguiled by Popish shows,
Doatest on ribands, *flounces,* furbelows."
Gay: Eclogues; The Espousal.

flounçed, *a.* [Eng. *flounc(e)* (2), s.; *-ed.*] Adorned or furnished with flounces.]

floŭnç'-ĭng, *pr. par., a., & s.* [FLOUNCE (2), *v.*]

A. & B. *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* The act of furnishing with flounces; a flounce.

floŭn'-dĕr, * flown-dur, *s.* [Sw. *flundra;* cogn. with Dan. *flynder;* Icel. *flyndhra;* the name is probably derived from its floundering or flapping about.]

1. *Zool.: Platessa flesus*, a flat fish belonging to the family Pleuronectidæ. It resembles the plaice, but has paler spots: there are only small grains at the salient line of the head; there is a rough button all along its dorsal and anal fins, and the lateral line has bristling scales. It occurs in the British seas, the Baltic, the Mediterranean, &c. It occurs also in the brackish water at the mouths of rivers, and even ascends to where the water is fresh. The flounder is eaten, but is much inferior in taste to the plaice. It is called also the Fluke or Flook.

"*Flounders* inhabit every part of the British sea."—*Pennant: Zoology; The Flounder.*

2. *Boot-making:* A slicking tool whose edge is used to stretch leather for a boot-front in a blocking or crimping board.

floŭn'-dĕr, *v.i.* [A nasalized form of Dut. *flodderen* = to dangle, flap, splash about. (*Wedgwood.*)]

1. *Lit.:* To struggle or make violent movements with the limbs, as when stuck in mire; to roll, toss, or tumble about.

"His steed now *flounders* in the brake;
Now sinks his barge upon the lake."
Scott: Lady of the Lake, i. 33.

2. *Fig.:* To struggle along with difficulty, as though walking through a bog.

"He plunged for sense, but found no bottom there,
Yet wrote and *floundered* on in mere despair."
Pope: Dunciad, i. 120.

floŭr, * floure, * flowre. *s.* [The same word as *flower* (q.v.); Fr. *fleur;* Sp. *flor.*]

1. The finely ground meal of wheat or other grain; specif. the finer part of wheat meal separated by bolting.

"Then studious she prepares the choicest *flour*."
Pope: Homer; Odyssey ii. 426.

2. The fine soft powder of any substance: as, *flour* of emery.

flour-beetle, *s.*

Entom.: A beetle, *Tenebrio molitor.*

flour-bolt, *s.*

Mill.: A gauze-covered revolving, cylindrical frame or reel, into which meal or chop from the stones is fed, in order to have the flour sifted through and separated from the offal. The cylinder is large and long, and its axis is usually inclined; the bolting-cloth with which it is covered is of different grades of fineness, the meshes at the reception end being closer than towards the discharge. The matters passing through at the different portions of the length are of different grades, and are kept separate.

flour-box, *s.* A dredging or dredge-box.

flour-cooler, *s.*

Mill.: A chamber, trunk, or machine in which meal from the stones is placed to cool, or is stirred by a blast before arriving at the bolt.

flour-dredge, flour-dredger, *s.* A flour-box or dredge-box.

flour-dresser, *s.* A hollow, stationary, inclined cylinder or frame covered with wire-cloth of different degrees of fineness, 64, 60, 38, and 16 meshes to the inch, the finest being at the upper end. Within the cylinder is a reel whose rails are covered with brushes, which, in their revolution, act against the interior wire surface of the cylinder. The meal is conducted within the cylinder by a spout or hopper, and is thus rubbed through the wire meshes, the finest at the top, the next at the succeeding grade, and so on. The various qualities are collected in the separate partitions of the box.

flour-mill, *s.* A mill for grinding and sifting flour. Explosions in flour-mills are due either to the rapid combustion of finely divided flour diffused through the air, caused by a spark given off by the too close contact of the stones, or to the ignition of a mixture of air with gases produced by the decomposition of flour.

flour of mustard, *s.* The seeds of mustard, dried, powdered, and sifted.

flour-packer, *s.* A machine for compactly filling barrels or bags with flour. It is usually a follower or piston which presses upon the flour, but in some cases the flour as it falls into the barrel is continuously packed by a spiral.

flour-sifter, *s.* A domestic sieve for separating lumps or accidental impurities from the flour of the bin or barrel.

floŭr, *v.t. & i.* [FLOUR, *s.*]

A. *Transitive:*

* **1.** To grind and bolt: as, To *flour* wheat.

2. To cover with flour; to sprinkle flour upon.

B. *Intrans.:* To become covered with a floury substance.

"With ordinary care in operation, the prepared quicksilver does not sicken or *flour* through the deleterious influence of arsenides, &c."—*Daily Telegraph*, Sept. 15, 1882.

*** floure, * flouren,** *v.i.* [FLOWER, *v.*]

floŭred, *a.* [Eng. *flour*, v.; *-ed.*] A term applied to the finely granulated condition of quicksilver, produced to a greater or less extent by its agitation during the amalgamation process.

floŭr'-ĕt, * flour-ette, *s.* [O. Fr. *florete, flurette;* Fr. *fleurette;* dimin. of *fleur* = a flower.] A little flower, a floweret.

"Nought yclad in silk was he,
But alle in floures and in *flourettes*."
Romaunt of the Rose, 890.

*** floŭr'-ĭng,** *pr. par., a. & s.* [FLOWERING.]

flôur'-ĭsh, * flor-esh, * flor-ische, * flor-ish, * flor-ishe, * flor-issh-en, * flor-ysh, * flor-schyn, *v.i. & t.* [Fr. *fleurissant*, pr. par. of *fleurir* = to flourish, from Lat. *floresco*, incept. of *floreo* = to flower, to bloom, from *flos* (genit. *floris*) = a flower; Sp. & Port. *florecer.*]

A. *Intransitive:*

I. *Ordinary Language:*

1. To thrive; to be in vigour; to grow vigorously or luxuriantly.

"The figetree shal not *florishe*."—*Wycliffe: Habakkuk* iii. 17.

2. To be in a prosperous state; to be prosperous; to increase in wealth, honour, or happiness; to thrive, to prosper.

"In his days shall the righteous *flourish*."—*Ps.* lxxii. 7.

3. To be at the height of power, honour, fame, or excellence.

"In our schoolbooks we say
Of those that held their heads above the crowd
They *flourished* then and then."
Tennyson: Brook, 11.

4. To grow, to increase, to thrive.

"Patriots, alas! the few that have been found
Where most they *flourish* upon English ground."
Cowper: Table Talk, 335, 337.

5. To use florid language; to indulge in flowers of rhetoric and highly embellished diction.

"They dilate sometimes, and *flourish* long upon little incidents, and they skip over and but lightly touch the drier part of their theme."—*Watts: Logic.*

7. To move in quick circles or figures; to swing about in the hand; to brandish.

"My sword, I say, old Montague is come,
And *flourishes* his blade in spite of me."
Shakesp.: Romeo & Juliet, i. 1.

* **8.** To embellish or adorn with flowers of rhetoric or highly-flown language.

"The labours of Hercules, though *flourished* with such fabulous matter, yet notably set forth the consent of all nations and ages in the approbation of the extirpating and debellating monsters and tyrants."—*Bacon.* (*Johnson.*)

* **9.** To colour; to varnish or gloss over.

"To bring you thus together, 'tis no sin
Sith that the justice of your title to him
Doth *flourish* the deceit."
Shakesp.: Measure for Measure, iv. 1.

¶ Crabb thus discriminates between to *flourish*, to *thrive*, and to *prosper*: "To *flourish* expresses the state of being that which is desirable; to *thrive* the process of becoming so. In the proper sense *flourish* and *thrive* are applied to the vegetation: the former to that which is full grown; the latter to that which is in the act of growing: the oldest trees are said to *flourish*, which put forth their leaves and fruits in full vigour; young trees *thrive* when they increase rapidly towards their full growth. *Flourish* and *thrive* are taken likewise in the moral sense; *prosper* is employed only in this sense: *flourish* is said either of individuals or communities of men; *thrive* and *prosper* only of individuals. To *flourish* is to be in full possession of the powers, physical, intellectual, and incidental; an author *flourishes* at a certain period; an institution *flourishes;* literature or trade *flourishes;* a nation *flourishes*. To *thrive* is to carry on one's concerns to the advantage of one's circumstances; it is a term of familiar use for those who gain by positive labour: the industrious tradesman *thrives*. To *prosper* is to be already in advantageous circumstances: men *prosper* who accumulate wealth agreeably to their wishes and beyond their expectations." (*Crabb: Eng. Synon.*)

flôur'-ĭsh, *s.* [FLOURISH, *v.*]

I. *Ordinary Language:*

* **1.** A flourishing condition; a state of prosperity.

"Rome was in that *flourish* that Saint Austin desired to see her in."—*Howell.* (*Webster.*)

* **2.** Showy or ambitious splendour; bravery; show; ostentation.

"I called thee then vain *flourish* of my fortune;
I called thee then poor shadow, painted queen."
Shakesp.: Richard III., iv. 4.

* **3.** Ostentatious embellishment; far-fetched elegance or floridness of diction.

"By a *flourish* of fine words they devise shifts, evasions, and justifications."—*P. Holland: Plutarch*, p. 82.

4. A figure formed by strokes or lines fancifully drawn; elaborate ornamentation by means of lines or strokes.

"They were intended only for ludicrous ornaments of nature, like the *flourishes* about a great letter that signify nothing, but are made only to delight the eye."—*More: Antidote against Atheism.*

5. A brandishing or flourishing about, as of a sword in the hand; a waving about.

II. *Music:*

(1) The execution of profuse but unmeaning ornamentation in music.

(*a*) Willow—pistillate flower; (*b*) Willow—staminate flower. 3. (*a*) Section of Buttercup, showing apocepalous calyx, apopetalous corolla, and apocarpous pistil; (*b*) Stamen, filament, and anther; (*c*) Pollen; (*d*) Single carpel (highly magnified), showing stigma and ovule enclosed.

the organs of reproduction by seed. The earlier botanists limited it to the corolla of a

plant, but Linnæus extented it to include the calyx, corolla, stamens, and pistil. The two last are the only essential parts. This is the modern sense of the term. The manner in which its parts are arranged is called their æstivation, and the calyx, corolla, and other parts are generally believed to be transformed leaves arranged upon a branchlet; but many writers consider the petals to be transformed stamens. The arrangement of flowers upon a branch or stem is called Inflorescence (q.v.).

¶ The term Flower of Constantinople, or Flower Constantinople, is a translation of the old name *Flos constantinopolitanus*, given to the plant now called *Lychnis Chalcedonica*. It is named also Flower of Bristowe. (*Prior*, in *Britten & Holland*.) The Flower of the Axe is *Lobelia urens*, found in England only near Axminster in Devon; the Flower of Crete is *Mesembryanthemum Tripolium*; and Flower of Jove, *Lychnis Flos Jovis*; Flower of Four Hours, *Mirabilis dichotoma*; Flowers of Heaven, a fungal, *Nostoc cœruleum*; and Flowers of Tan, *Æthalium*, a gasteromycetous fungal. It is so called from its growing upon tan. It can creep to the distance or height of several feet, as if endowed with will.

3. *Print.:* Ornamental types or blocks for borders of pages, cards, and the like.

flower-animals, *s.*
Zool.: Anthozoa.

¶ The Barbadoes Flower-fence is *Poinciana pulcherrima* [BARBADOES]; the Bastard Flower-fence the genus Adenanthera.

flower-garden, *s.* A garden or part of a garden devoted to the cultivation of flowers. It is generally laid out in beds, sometimes with small artificial ponds, rockeries, &c.
"Observing that this manure produced flowers in the field, I made my gardener try those shells in my *flower-garden*, and I never saw better carnations or flowers."—*Mortimer: Husbandry.*

flower-gentle, *s.*
Bot.: (1) The same as FLORAMOUR (q.v.); (2) The genus Amaranthus, especially the *A. spinosus*.

flower-head, *s.*
Bot.: A kind of inflorescence in which numerous florets are inserted into a broad receptacle, a capitulum (q.v.).

flower-inwoven, *a.* [FLOWER-ENWOVEN.]

* **flower-kirtled,** *a.* [FLOWERY-KIRTLED.]

flower-maker, *s.* A maker of artificial flowers.

flower-month, *s.*
1. *Gen.:* Any month in any country in which flowers are most abundant; the English May.
2. *Spec.:* The month Anthesterion, the eighth of the Attic year, corresponding nearly to our February; so called because that time was, in that country, the season of flowers.
"Never fell such fragrance from the *flower-month's* rose-red kirtle
As from chaplets on the bright friends' brows who slew their lord." *A. C. Swinburne: Athens.*

flower-piece, *s.* A picture representing flowers.

flower-pot, *s.* A flaring earthenware vessel to hold a plant with a sufficient quantity of soil for its growth.
"Young particularly requested that the messengers might be ordered to examine the Bishop's *flower-pots*."—*Macaulay: Hist. Eng.*, ch. xviii.

flower-rent, *s.* A species of tenure, more common on the Continent than in England, though some instances of it are to be found in this country. By it flowers, probably, as Grimm suggests, with a symbolic meaning, were delivered to the feudal lord, in lieu of military service.
"We may compare with the *flower-rents*, in which Grimm (*Deut. Myth.*) saw a heathen practice continued into Christian times, our English instances of ancient rents in the shape of white bulls, &c."—*Elton: Origins of English History*, p. 402.

flower-show, *s.* An exhibition, generally for competition, of flowers, plants, vegetables, &c.

flower-stalk, *s.*
Bot.: The peduncle supporting the flowers in a plant.

flower-work, *s.* Natural or artificial flowers arranged for ornament.

flŏw'-ĕr, * **flour-en,** * **floure, flouri,** *v.i. & t.* [O. Fr. *florir, flurir*; Fr. *fleurir*, from Lat. *floreo* = to bloom, to flower; *flos* (genit. *floris*) = a flower.]

A. *Intransitive:*

I. *Literally:*

1. To be in flower, to be in blossom, to bloom, to blossom, to put forth flowers.
"Immortal Amarant . . .
Flowers aloft, shading the fount of life."
Milton: P. L., iii. 357.

A. & B. *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

1. The act or state of bearing flowers.

¶ As a rule plants flower in a ratio inverse to that of their luxuriance of growth. When a plant flowers it exhausts itself. If an annual or biennial it tends to die, if a perennial it requires some time to recover itself.

* 2. The act or state of fermenting or frothing; fermentation.
"They become dull, and the drink dead, which ought to have a little *flowering*."—*Bacon: Natural Hist.*, § 52.

flowering-ash, *s.*
Bot.: The genus Ornus. The European species is *Ornus europæa*.

flowering-fern, flowery-fern, *s.*
Bot.: Osmunda regalis, formerly called *Filix florida* or *F. florescens*.

flowering-flags, *s. pl.*
Bot.: A name for the Iridaceæ.

flowering-plants, *s. pl.*
Bot.: Plants bearing flowers of the normal type—viz., having a calyx, a corolla, stamens, and one or more pistils, or at least the last two; phanerogamous plants, sexual plants. The assemblage contains the Rhizogens, Endogens, Dictyogens, Gymnogens, and Exogens.

flowering-rush, *s.*
Bot.: Butomus umbellatus.

flŏw'-ĕr-lĕss, *a.* [Eng. *flower; -less.*]
Ord. Lang. & Bot.: Destitute of or without flowers.
"An herbe he thought *flourelesse*, all grene."
Chaucer: Dream, 1,382.

flowerless-plants, *s. pl.*
Bot.: Plants of comparatively low organization not possessing flowers but only fructification; cryptogamic plants, asexual plants. The assemblage contains the Thallogens and Acrogens (q.v.).

flŏw'-ĕr-lĕss-nĕss, *s.* [Eng. *flowerless; -ness.*] The quality or state of being flowerless, or without flowers.

flŏw'-ĕr-ĭ, * **flour-ie,** * **flowr-ie,** * **flour-y,** *s. & a.* [Eng. *flower; -y.*]

A. *As pr. par.:* (See the verb).

B. *As adjective:*

1. Moving, as a stream.
"My grace, a *flowing* stream, proceeds
To wash your filthiness away."
Cowper: Olney Hymns, xiii.
2. Abounding, copious.
3. Fluent, smooth: as, style or language.

C. *As subst.:* The act or state of moving, as a fluid; flow.

flowing-furnace, *s.*
Founding: Another name for the cupola for melting iron in foundries.

flowing-sheets, *s. pl.*
Naut.: The position of the sheets, or lower corners of the principal sails, when they are loosened to the wind, so as to receive it into their cavities, in a direction more nearly perpendicular than when they are close-hauled, although more obliquely than when the vessel is sailing before the wind.

flōw′-ĭng-lȳ, *adv.* [Eng. *flowing; -ly.*] In a flowing manner; abundantly, copiously, fluently.

flōw′-ĭng-nĕss, *s.* [Eng. *flowing; -ness.*] The quality or state of being flowing; fluency, copiousness.

* **flowk,** *s.* [FLUKE.]

flōwk′-wŏrt, *s.* [Provinc. Eng. for *fluke.* So called because it is supposed to cause flukes in sheep.]

Bot.: Hydrocotyle vulgaris. (*Prior; Britten & Holland.*)

flōw′-mŏss, *s.* [Eng. *flow,* and *moss.*] A watery moss; morass; a flow-bog.

"There wasna muckle *flowmoss* in the shaw, if we took up our quarters right."—*Scott: Rob Roy,* ch. xxviii.

flōwn, *pa. par.* or *a.* [FLY, *v.*]

A. *As pa. par.:* (See the verb).

B. *As adjective:*

1. Gone away fled.

* 2. Puffed up, inflated.

"When night
Darkens the streets, then wander forth the sons
Of Belial, *flown* with insolence and wine."
Milton: P. L., i. 502.

* **flōw′-rĕt-rȳ,** *s.* [Eng. *flowret; -ry.*] Carved work in imitation of flowers.

"Nor was all this *flowretry* and other celature on the cedar lost labour, because concealed."—*Fuller: A Pisgah Sight of Palestine,* pt. i., bk. iii., ch. 5.

† **flōw′-rĭe,** *s.* [FLOWERY.]

flowrie cole, *s.* The cauliflower. (*Lyte; Britten & Holland.*)

flŏx, *s.* [FLOSS (2), *s.*] The down of animals.

"They dress it [their nest] all over with down feathers, or fine *flox.*"—*P. Holland: Pliny,* pt. i. p. 288.

* **flōȳte,** *s.* [FLUTE, *s.*]

flū′-ą-vĭl, *s.* [Etym. doubtful; perhaps from Lat. *fluo* = to flow.]

Chem.: When gutta percha is boiled with absolute alcohol, two substances are dissolved, Alban $C_{20}H_{30}O$, which melts at 160°; and Fluavil $C_{20}H_{32}O$, which is separated from Alban by being soluble in cold alcohol. Fluavil, an amorphous resin which melts at 50° and becomes liquid at 100° to 110°. Fluavil is soluble in cold alcohol, ether, and in carbon disulphide.

flū′-cąn, *s.* [FLOOKAN.]

flū′-çĕr-ĭne, *s.* [Eng., &c. *fluor;* Lat. *cerium;* and suff. *-ine* (*Min.*)]

Min.: The same as FLUOCERITE (q.v.).

* **flŭc-tĭf-ĕr-oŭs,** *a.* [Lat. *fluctus* = a wave, *fero* = to bear, to produce, and Eng. adj. suff. *-ous.*] Producing or tending to produce waves.

* **flŭc′-tion,** *s.* [FLUXION.]

* **flŭc′-tion-ĭst,** *s.* [FLUXIONIST.]

* **flŭc-tĭ′-sŏn-oŭs,** *a.* [Lat. *fluctus* = a wave, *sono* = to sound, and Eng. adj. suff. *-ous.*] Sounding like waves.

* **flŭc-tu-ą-bĭl′-ĭ-tȳ,** *s.* [Eng. *fluctuable; -ity.*] Capability of or liability to fluctuation.

* **flŭc′-tu-ą-ble,** *a.* [Lat. *fluctuo* = to float about, and Eng. *-able.*] Capable of or liable to fluctuation.

* **flŭc′-tu-ăn-çy,** *s.* [Lat. *fluctuans,* pr. par. of *fluctuo* = to float about.] Fluctuation.

"Partly by innate *fluctuancy.*"—*Gauden: Tears of the Church,* p. 222.

* **flŭc′-tu-ąnt,** *a.* [Lat. *fluctuans,* pr. par. of *fluctuo* = to float about.]

1. Floating on the waves.

"Whether it be *fluctuant* as the ark of Noah."—*Bacon: Of Learning,* ii.

2. Moving about like a wave; fluctuating, wavering, unsteady.

"How is it possible for any man to be at rest in this *fluctuant* wandering humour and opinion?"—*L'Estrange.*

flŭc′-tu-āte, *v.i. & t.* [Lat. *fluctuatus,* pa. par. of *fluctuo* = to float about: *fluctus* = a wave; *fluo* = to flow.]

A. *Intransitive:*

* 1. To move hither and thither as wave or water in a state of agitation.

"So sounds, so *fluctuates* the troubled sea."
King: Rasselas, or the Favourite.

2. To float backwards or forwards, as with the motion of water.

3. To be unsteady or unsettled: as, The price of stocks *fluctuates.*

"Great Western *fluctuated* a little, and was finally about the same as yesterday."—*Daily Telegraph,* Aug. 23, 1883.

4. To be in a state of doubt or irresolution; to be undecided; to hesitate; to waver.

"The tempter . . . to passion moved,
Fluctuates disturbed."
Milton: P. L., ix. 668.

* **B.** *Trans.:* To cause to move or roll about, as a wave.

"And *fluctuate* all the still perfume."
Tennyson: In Memoriam, xcv. 56.

¶ Crabb thus discriminates between to *fluctuate* and to *waver:* "To *fluctuate* conveys the idea of strong agitation: to *waver* that of constant motion backward and forward: when applied in the moral sense, to *fluctuate* designates the action of the spirits or the opinions; to *waver* is said only of the will or opinions: he who is alternately merry and sad in quick succession is said to be *fluctuating;* or he who has many opinions in quick succession is said to *fluctuate;* but he who cannot form an opinion, or come to a resolution, is said to *waver.*" (*Crabb: Eng. Synon.*)

flŭc-tu-ā′-tion, *s.* [Lat. *fluctuatio,* from *fluctuatus,* pa. par. of *fluctuo;* Fr. *fluctuation.*]

I. *Ordinary Language:*

1. A motion like that of the waves; an alternate rise and fall: as, The *fluctuations* of the sea.

2. A rising and falling suddenly; unsteadiness: as, a *fluctuation* in the price of stocks.

3. Hesitation, wavering, doubt; alternations of hope and fear.

"Mute register, to him, of time and place,
And various *fluctuations* in the breast."
Wordsworth: Excursion, vi.

4. Change, uncertainty, vicissitude.

"Good lack, we know not what to-morrow brings—
Strange *fluctuations* of all human things!"
Cowper: Epistle to Joseph Hill.

II. *Med.:* The perceptible motion conveyed to pus or other fluids when the adjacent parts are subjected to pressure or percussion.

* **flŭc′-tu-oŭs,** *a.* [Lat. *fluctu(o)* = to float about; Eng. adj. suff. *-ous.*] Pertaining to the waves; flowing.

fluder, fludder, *s.* [A variant of *flutter* (q.v.).] Hurry, bustle, fuss, confusion.

flūe (1), *s.* [A corruption of *flute* (q.v.).]

I. *Ordinary Language:*

1. A passage for the conveyance of the volatile results of combustion from the fireplace to the open air, or into another passage; a smoke-duct, a chimney; one of a cluster of smoke-ducts in a stack of chimneys.

2. A passage in a wall for the conveyance of heat from one part of a building to another.

II. *Technically:*

1. *Mus.:* One of the divisions of organ-stops, so called because the sound is produced by the wind passing through a fissure, *flue,* or wind-way, and striking against an edge above.

2. *Steam-eng.:* A pipe for the conveyance of the caloric current through a boiler, to heat the surrounding water. It is usually secured in the sheets of the fire-box and smoke-box respectively, as in the locomotive.

flue-boiler, *s.* A steam-boiler whose water space is traversed by flues, that is, a tube in which the heated gases are conveyed. There are several varieties, as drop-flue, multiple-flue, return-flue, &c.

flue-brush, *s.* A cylindrical brush of wire or steel strips used to clean the scale and soot from the interior of a flue, to lay bare the metallic surface.

flue-cleaner, *s.*

1. A brush of wire or steel slips, or a scraper to clean the surfaces of steam-boilers.

2. A device by which a jet of steam may occasionally be projected along a boiler flue to blow out the scale of soot.

flue-hammer, *s.*

Coopering: One whose peen has a working edge, the length of which is in the plane of the sweep of the hammer. It is used in flaring one edge of each iron hoop to enable it to fit the bulge of the cask. [PEEN.]

flue-plate, *s.* A plate into which the ends of the flues are set.

flue-scraper, *s.* An implement having circular or spiral blades to scrape the soot and scale from the fire-surface of flues of steam-boilers.

flue-surface, *s.*

Steam-eng.: The area of surface of the boiler which is exposed to the action of the flame and heated gases after they have left the fire-chamber or surface. The heating-surface of a boiler is made up of the fire-surface and flue-surface.

flūe (2), *s.* [Etym. doubtful, perhaps only a variant of *flock* (2) (q.v.).] Soft down or fur, such as may float in the air; fluff.

flūe, *v.t.* [FLUE (1), *s.*]

Carp.: To expand or splay, as the jambs of a window.

flū-ĕl′-lĕn, flū-ĕl′-lĭn, flū-ĕl′-lȳng, *s.* [Wel. *flwellen,* from *lysiau Llewellyn* = Llewellyn's flower; Prior derives it from Dut. *flu-weelen* = downy, velvety.]

Bot.: Veronica officinalis, and some other species of the genus.

¶ *Linaria spuria* and *L. Elatine* are both popularly known as Female Fluellin.

flū′-ĕl-līte, *s.* [Eng., &c. *fluorine; aluminium,* and suff. *-ite* (*Min.*) (q.v.).]

Min.: A transparent mineral, composed of fluorine and aluminium. It is white in colour, vitreous in lustre, and has a hardness of 3. It is found at Stennagwyn in Cornwall, but is rare. (*Dana.*)

* **flū′-ençe,** *s.* [Fr., from Lat. *fluens,* pr. par. of *fluo* = to flow.]

1. A stream.

"With *fluences* of sweetest water rinse."
Chapman: Homer; Iliad xvi. 224.

2. The same as FLUENCY (q.v.).

"He is conceited to have a voluble and smart *fluence* of tongue."—*Milton: Animadversions on the Remonstrants' Defence.* (Pref.)

flū′-ęn-çȳ, *s.* [Lat. *fluentia,* from *fluens,* pr. par. of *fluo* = to flow; Fr. *fluence.*]

1. The quality of being fluent or flowing freely and smoothly, without harshness or asperity.

2. Readiness, copiousness.

"Fervency, freedom, *fluency* of thought."
Cowper: Table Talk, 700.

* 3. Affluence, abundance.

"Those who grow old with *fluency* and ease."
Sandys: Paraphrase of the Psalms.

flū′-ęnt, *a. & s.* [Lat. *fluens* (genit. *fluentis*), pr. par. of *fluo* = to flow.]

A. *As adjective:*

* 1. Flowing; liquid; fluid.

"It is not malleable; but yet is not *fluent,* but stupified."—*Bacon.*

* 2. Flowing, in motion, moving, not stationary.

"Motion being a *fluent* thing . . . it doth not follow that because anything moves this moment, it must do so the next."—*Ray: On the Creation.*

3. Ready in the use of words; having command of a wide range of language; eloquent.

"*Fluent* in words, and bold in peaceful councils."
Rowe: Fair Penitent, ii.

4. Ready; copious; voluble; eloquent.

"That *fluent* and sonorous elocution which was in his family a hereditary gift."—*Macaulay: Hist. Eng.,* ch. xiv.

B. *As substantive:*

* 1. *Ord. Lang.:* A stream, a current, a confluent.

"And at the *fluents* of the ocean,
Neare earth's extreame bounds, dwelt with him."
Chapman: Hymne to Venus.

2. *Math.:* The variable or flowing quantity which, in the modern calculus, is called the function.

flū′-ęnt-lȳ, *adv.* [Eng. *fluent; -ly.*] In a fluent, ready, or voluble manner; with fluency.

"For the dragoons, a wordy race . . .;
Spoke *fluently* the sutler's tongue."
Cooper: Ver-Vert, 3.

* **flū′-ęnt-nĕss,** *s.* [Eng. *fluent; -ness.*] The quality or state of being fluent; fluency.

"The *fluentness* and consistencie of time has not this inconvenience."—*Mountagus: Devoute Essayes,* pt. ii., tr. xii., § 3.

flū′-ēy, *a.* [Eng. *flue* (2), *s.; -y.*] Like flue or fluff; downy, fluffy.

flŭff (1), *s.* [Onomatopoetic.] A puff of wind.

"I'm sure an ye warna a fish or something war, ye could never a' keepit ae *fluff* o' breath in the body o' ye in aneath the loch."—*St. Patrick*, iii. 31.

¶ *Fluff in the pan:*

(1) The explosion of powder in the lock-pan of a gun without causing the piece to go off; a flash in the pan.

(2) *Fig.:* A failure.

fluff-gib, *s.* A squib.

"*Fluff-gibs*, disturbing the king's peace and disarming his soldiers."—*Scott: Rob Roy*, ch. xxxi.

flŭff (2), *s.* [Flue (2), *s.*] Light down or fur; flue; light flocculent matter; nap.

flŭf'-fȳ, *a.* [Eng. *fluff* (2); -*y*.] Like fluff; composed of fluff or light flocculent matter; fluey.

"And she seemed, in her white *fluffy* dress,
Like a bud I must stroke and caress."
Hilda among the Broken Gods (1878), 126.

***flû'-gel-măn,** *s.* [Fugleman.]

flŭg'-gĕ-a, *s.* [Named by Willidenow after John Flügge, a German cryptogamic botanist.]

Bot.: A genus of Euphorbiaceæ. The bark of *Fluggea virosus* intoxicates fish. The berries of *F. leucopyrus*, an Indian, and *F. abyssinica*, an Abyssinian species, are eaten by the natives.

flûght (*gh* guttural), *v.i.* [Flight.] To flutter, to flaunt. (*Scotch.*)

flû'-ĭd, *a.* & *s.* [Fr. *fluide*, from Lat. *fluidus* = flowing, liquid, from *fluo* = to flow; Sp. & Ital. *fluido*.]

A. *As adj.:* Having the parts easily separable; consisting of particles which move and change their relative positions very readily; capable of flowing; liquid, gaseous.

"The earth being a mixed mass, somewhat *fluid*."—*Paley: Natural Theology*, ch. xxii.

B. *As substantive:*

I. *Ord. Lang.:* Any body not solid.

"Were it not for the presence of heat or for a certain degree of it, all *fluids* would be frozen."—*Paley: Natural Theology*, ch. xxi.

II. *Physics:* The fundamental property of fluids, viewed as forces, is their equality of pressure in all directions. The term includes both liquids and gases.

"I shall merely remind those who have to do with steam boilers or Brahmah's presses, or other engines in which *fluids* are in a state of violent compression, that there is equal tendency to burst upwards, downwards, or sideways."—*Prof. Airy: Popular Astronomy* (6th ed.), p. 246.

¶ (1) *Elastic fluids:*

Physics: Gases.

(2) *Electric* or *Electrical fluid:*

Elect.: A fluid composed, in the opinion of Symmer, now generally accepted, of two fluids, the positive and the negative. [Electricity.]

(3) *Imponderable fluids:*

Physics: A name sometimes given to heat, light, magnetism, and electricity. They are mobile and yet, if consisting of matter, are in such a state of tenuity that they possess no perceptible weight.

(4) *Magnetic fluids:*

Magnetism: Two fluids assumed to exist. They are called respectively the north or boreal fluid and the south or austral fluid, the former predominating at the North, and the latter at the South pole of the magnet. Sometimes the north fluid is called the Positive, and the south fluid the Negative one.

(5) *Ponderable fluids:*

Physics: Those possessed of weight; as water and hydrogen gas.

fluid-compass, *s.*

Naut.: That in which the card revolves in its bowl floated in water or alcohol.

fluid-lens, *s.*

Optics: A lens in which a liquid is imprisoned between circular glass discs of the required curvatures. Attempts to obtain achromatism have been made by using metallic solutions and other liquids having a higher dispersive power than flint glass. Though several of these liquids appear to have given excellent results experimentally, they have never been brought into general use.

fluid-meter, *s.* A device to ascertain the quantity of fluid passing a selected point. Some are driven by clock-work or other motor, others by the pressure of the fluid.

flû-ĭd'-ĭ-tȳ, *s.* [Fr. *fluidité*, from *fluide* (*a.* & *s.*) = fluid.] The state of being fluid—*i.e.*, of being either in the liquid or the gaseous state. In the former the body has molecules so mobile in their relative positions that it will take the form of any vessel in which it is placed; in the latter the molecules are mutually repellent, and the body tends to diffuse itself in all directions through the adjacent atmosphere.

"Keeping things in a state of solution, that is to say, in a state of *fluidity*."—*Paley: Nat. Theology*, ch. xxi.

***flû'-ĭd-īze,** *v.t.* [Eng. *fluid*; -*ize*.] To make fluid; to convert into a fluid.

flû'-ĭd-nĕss, *s.* [Eng. *fluid*; -*ness*.] The quality or state of being fluid: fluidity.

"Its *fluidness* may not proceed from the agitation of the ambient air."—*Boyle: Works*, ii. 571.

flû'-ĭng, *s.* [Etym. doubtful.] Expanding or splaying as the jambs of a window. (*Ogilvie*, 1st ed.)

flû'-kan, *s.* [Flucan.]

flûke (1), *s.* [A.S. *flóc*; cogn. with Icel. *flóki*.]

Ordinary Language & Zoology:

1. A flounder; a kind of flat-fish.

2. An hydatid resembling a flounder.

"A little *fluke*, in general appearance much like a miniature flounder, lives steeped in gall in the biliary vessels."—*Watson: Principles & Practice of Physic*, let. lxxiii.

¶ Flukes are suctorial worms, parasitic in birds, fishes, and other animals. They are arranged in the order Trematoda (q.v.).

fluke-worm, *s.*

Zool.: An entozoon, *Distoma hepaticum*, resembling a melon seed, found in the gall bladder and ducts of the sheep and other ruminants, and tending to produce in them the disease called rot.

flûke (2), ***flook,** *s.* [A non-nasalized form, from Low Ger. *flunk* = a wing, the palm of an anchor; Dan. *ankerflig*; Sw. *ankarfly* = the fluke of an anchor.]

1. *Naut.:* The palm of an anchor. The broad, holding portion which penetrates the ground. [Anchor.]

2. *Mining:* The head of a charger; an instrument used for cleansing the hole previous to blasting.

3. *Zool.:* One of the two triangular divisions of the tail of a whale; so called from their resemblance to the fluke of an anchor.

flûke (3), *s.* [Etym. doubtful.] In billiards an accidentally successful stroke; a stroke by which the player accidentally gains a score or an advantage which he did not play for: hence the word is used for any lucky chance; a piece of luck.

"It is a happy *fluke*."—*Black: Princess of Thule*, ch. xix.

flûke (4), *s.* [See def.] A kind of potato, probably so called from its shape. [Fluke, (1).]

flûk'-ȳ (1), ***flook-y,** *a.* [Eng. *fluk*(*e*) (2); -*y*.] Formed like a fluke; having a fluke.

"To heave the *flooky* anchors from the sand."
Rowe: Lucan; Pharsalia ii. 1,076.

flûk'-ȳ (2), ***fluk-ey,** *a.* [Eng. *fluke* (3) -*y*.] Distinguished by flukes; of the nature of a fluke; obtained by chance rather than by skill.

"Bonnor next got a *flukey* three to square leg."—*Standard*, Sept. 3, 1882.

flûme, flum, flumm, *s.* [A.S. *flum*; Icel. *flúm*, *flóm*; M. H. Ger. *phlûm*, *phloum*, *vlûm*; Ital. *fiume*; Lat. *flumen*.]

***1.** A river.

"Quen Crist com to *flum* Jordan.
Metrical Homilies. p. 45.

2. A chute or penstock, open or covered, for the passage of water to a wheel or washer. Used with water-wheels and gold-washers of various kinds.

flume-bridge, flume-stop, *s.* A fire-bridge (q.v.).

***flû'-mĭn-oŭs,** *a.* [Lat. *flumineus*, from *flumen* (genit. *fluminis*) = a river; *fluo* = to flow.] Pertaining to rivers; abounding in rivers; well-watered.

flŭm'-mĕr-ȳ, ***flum-ar-y,** *s.* [Wel. *llymm*, *llymruwd*, from *llymrig* = raw, sharp; *llymn* = to sharpen or whet; *llym* = sharp, severe.]

1. *Lit.:* A kind of food made of flour or meal; pap.

"There was a farmer of my parish who used to sup upon wild ducks and *flummery*."—*Goldsmith: Citizen of the World*, lvii.

2. *Fig.:* Anything insipid or out of place; nonsense, humbug.

† **flŭmp,** *v.t.* [Onomatopoetic; cf. *plump*.] To put or set down with violence.

"Chairs were *flumped* down on the floor."—*Thackeray: Paris Sketch-book*, ch. v.

flŭm'-mŏx, flŭm-mŭx, *v.t.* [Etym. doubtful.] To puzzle, to embarrass, to hinder, to defeat.

"He'll be what the Italians call regularly *flummoxed*."—*Dickens: Pickwick*, ch. xxxiii.

flŭng, *pret. & pa. par. of v.* [Fling, *v.*]

flŭnk, *s.* [Etym. doubtful.]

1. A lazy, lounging fellow.

2. A failure in or backing out of any undertaking.

flŭnk, *v.i.* [Flunk, *s.*] To fail, as in a lesson; to retire through fear; to back out. (*Amer.*)

flŭn'-keȳ, flŭn'-kȳ, *s.* [According to Skeat the origin is clearly due to Fr. *flanquer* = to flank; hence it is equivalent to *flanker* (q.v.).]

1. A male servant in livery, as a footman.

2. A mean-spirited, cringing fellow; a toady.

3. One who from inexperience is easily deceived in buying stocks or shares; an inexperienced jobber. (*Amer.*)

flŭn'-keȳ-dŏm, flŭn'-kȳ-dŏm, *s.* [Eng. *flunkey*; -*dom*.]

1. Flunkeys collectively.

2. The position or condition of flunkeys; the domain or circle of flunkeys.

"You've been off and on lately between *flunkeydom* and the cause."—*C. Kingsley: Alton Locke*, ch. xxvii.

flŭn'-keȳ-ĭsm, flun'-kȳ-dŏm, *s.* [Eng. *flunkey*; -*ism*.] The quality or characteristics of a flunkey; cringing servility, toadyism.

flû-ō-, *pref.* [Abbrev. of Eng., &c. *fluorine*.] Having fluorine in its composition.

flû-ō-bör'-āte, *s.* [Pref. *fluo-*, and Eng., &c. *borate* (q.v.).]

Chem.: A compound of Fluoboric acid (q.v.), with a base.

flû-ō-bör'-ĭc, *a.* [Pref. *fluo-*, and Eng. *boric* (q.v.).]

fluoboric-acid, *s.*

Chem.: A compound of boric acid with hydrofluoric acid. $H_4BO_2F_3$ or HBO_2+3HF. Obtained by saturating water with boron fluoride BF_3; the end of the tube conveying the gas being placed under mercury, and cooled with ice, and then distilling, when an oily fluid comes over, which chars organic substances, and converts ethyl alcohol into ethyl ether. The potassium salt can be obtained by melting boric acid with potassium fluoride, and the sodium salt by crystallizing a mixture of sodium borate with sodium fluoride.

flû-ŏç'-ĕr-īne, *s.* [Pref. *fluo-*, and Eng., &c. *cerine* (q.v.).]

Min.: A yellow, reddish-yellow, or brownish yellow mineral, supposed to be distinct from fluocerite, to which it is akin. Compos.: cerium 17·6; fluorine 10·9; sesquioxide of cerium 66·4; water 4 = 100. Found with Fluocerite at Finbo, near Fahlun, in Sweden. (*Dana.*)

flû-ŏç'-ĕr-īte, *s.* [Pref. *fluo-*, and Eng., &c. *cerite* (q.v.).]

Min.: A tile-red or yellow translucent or opaque mineral, occurring in hexagonal prisms and plates, or massive. Hardness 4 to 5; sp. gr. 4·7; compos. cerium and fluorine. Found near Fahlun, in Sweden. The *Brit. Mus. Cat.* unites Fluocerine and Fluocerite.

flû'-ō-chlōre, *s.* [Pref. *fluo-*, and Gr. χλωρός (*chlōros*) = pale green.]

Min.: The same as Pyrochlore (q.v.).

flû-ō-chrōm'-ĭc, *a.* [Pref. *fluo*, and Eng *chromic* (q.v.).] See the compound.

fluochromic-acid, *s.*

Chem.: The potassium salt of fluochromic acid is obtained by heating powdered potassium dichromate $K_2Cr_2O_7$ with excess of com-

centrated hydrofluoric acid in a platinum dish. It forms red octohedra, having the formula $CrO_2F{\cdot}OK$.

flû-ō-phŏs′-phate, *s.* [Pref. *fluo*, and Eng., &c. *phosphate* (q.v.).]

Chem.: A compound containing a phosphate and a fluoride, as Apatite, which is phosphate of calcium, containing also fluoride of calcium.

flû′-or, *s.* [Lat. = a flowing, a flow (in *Med.* a flux).]

* I. *Ord. Lang.:* A fluid state.

"The particles of fluids, which do not cohere too strongly, and are of such a smallness as renders them most susceptible of those agitations which keep liquors in a *fluor*, are most easily separated and rarified into vapours."—*Newton: Opticks.*

II. *Technically:*

1. *Med.:* Menstrual discharge. [FLUOR ALBUS.]

2. *Min.:* The same as FLUORITE (q.v.).

* **fluor-albus,** *s.*

Pathol.: An old name for the disease called Leucorrhœa (q.v.).

fluor-apatite, *s.*

Min.: A variety of apatite containing an abnormally large amount of fluorine. The *Brit. Mus. Catal.* makes it the same as Francolite (q.v.).

fluor-spar, *s.*

Min.: The same as FLUORITE (q.v.).

flû-or-ăn′-thēne, *s.* [Eng. *fluor(ene)*, and *(phen)anthene* (q.v.).]

Chem.: $C_{15}H_{10}$. An aromatic hydrocarbon which occurs in the last portion of the solid hydrocarbon distillate from coal tar along with Pyrene, $C_{16}H_{10}$, and Chrysene, $C_{18}H_{12}$. They can be separated by converting them into picrate compounds, by melting them and gradually adding picric acid, or by dissolving them in alcohol. Chrysene is only slightly soluble, and mixing the solution with an alcoholic solution of picric acid, $C_6H_2(NO_2)_3(OH)$, the fluoranthene remains in the mother liquid and allows the mixed solution to crystallize. The picrates are decomposed ammonia. Fluoranthene crystallizes out of alcohol in needles, which melt at 109°. The compounds with picric acid, $C_{15}H_{10}{\cdot}C_6H_2(NO_2)_3{\cdot}OH$, form orange needles which melt at 182°.

flû′-or-āt-ĕd, *a.* [Eng., &c. *fluor*; *-ated.*]

Chem.: Combined with hydrofluoric acid (q.v.).

flû-or-bĕn′-zēne, *s.* [Eng., &c. *fluor(ine)*, and *benzene* (q.v.).]

Chem.: C_6H_5F. Obtained by heating calcium fluobenzoate with 4·3 parts of calcium hydrate. It melts at 40°, and boils at 180°. It is insoluble in water, but soluble in alcohol and in ether.

flû-or-bĕn-zō′-ĭc, *s.* [Eng. *fluor(ine)*, and *benzoic* (q.v.).] See the compound.

fluorbenzoic-acid, *s.*

Chem.: $C_6H_4F{\cdot}CO{\cdot}OH{\cdot}(1—3)$. Obtained by warming diazoamido-benzoic acid with fuming hydrofluoric acid. It crystallizes out of hot water in rhombic prisms which melt at 182°. It can be distilled over with steam. It is slightly soluble in cold water, easily soluble in alcohol and in ether. By long boiling with concentrated nitric acid it is converted into nitrofluorbenzoic acid. It forms crystalline salts.

flû-or-ēne, *s.* [Eng. *fluor (escence)*; *-ene.*]

Chem.: $C_{13}H_{10}$, or $H_2C<\begin{matrix}C_6H_4\\|\\C_6H_4\end{matrix}$ Diphenylene methane. It occurs in the solid hydrocarbon, which distils between 300° and 305° in the distillation of coal-tar. It can be prepared by passing diphenyl-methane, $CH_2(C_6H_5)_2$, through a red-hot tube, also by heating diphenylene-ketone with zinc dust. Fluorene crystallizes from hot alcohol in colourless plates which have a faint blue fluorescence, hence its name. They melt at 113°, and boil at 295°.

flû-or-ĕs′-çençe, *s.* [Eng. *fluor*; *-escence.*]

Optics: A quality which exists in the rays of light by which, in certain circumstances, they undergo a change of refrangibility. Hence certain solutions which, when viewed by transmitted light, are colourless, become bluish under reflected light. Fluorescence was discovered by Prof. Stokes in 1852.

flû-or-ĕs′-çent, *a.* [Eng. *fluor*; *-escent.*] Having the quality of fluorescence; pertaining to fluorescence.

flû-or-ĕs′-çe-ĭn, *s.* [Eng. *fluoresc(ence)*; *-ein.*]

Chem.: Resorcinol, phthalein anhydride, $C_{20}H_{12}O_5$, or $C_6H_4<^{CO\cdot C_6H_3(OH)}_{CO\cdot C_6H_3(OH)}>O$. Obtained by heating five parts of phthalic anhydride with seven parts of resorcin to 200°, till it forms a solid mass, which is boiled with water, the undissolved part washed with alcohol, then dissolved in dilute caustic soda, precipitated by dilute sulphuric acid and extracted with ether. It is crystallized from alcohol as a red powder, which is decomposed at 290°. It forms an orange solution in alcohol, which, when diluted with water, gives a green fluorescence. Its soda solution, when dilute, shows a beautiful yellow-green fluorescence. When dissolved in acetic acid, fluorescein is converted by bromine into Eosin (q.v.). By the action of zinc dust on its soda solution, it is reduced to fluorescin.

flû-or-ĕs′-çĭn, *s.* [Eng. *fluores(cence)*; *-in.*] (*Chem.*)

Chem.: Obtained by acting on a solution of fluorescein in soda with zinc dust. On heating, the solution becomes colourless; it is then acidified and shaken with ether, which on evaporation deposits fluorescin as a colourless substance, which in an alkaline solution oxidizes fluorescein.

flû-or-hȳ′-drĭc, *a.* [Eng. *fluor(ine)*; *hydr(ogen)*; *-ic.*] See the compound.

fluorhydric-acid, *s.*

Chem.: Hydrofluoric acid, hydrogen fluoride, fluoride of hydrogen, hydric fluoride, HF. The anhydrous acid is obtained by neutralising in a platinum dish the aqueous solution of hydrofluoric acid with caustic potash, and evaporating the solution. The salt, KF, crystallizes in cubes; when dissolved in water and evaporated quadratic tables of an acid, fluoride $KF{\cdot}HF$, crystallize out, these, when perfectly dry, are heated to redness in a platinum tube, and decomposed into $KFHF=KF+HF$. The anhydrous HF is an extremely dangerous substance; its vapour is very poisonous, and produces painful sores when it comes in contact with the skin. It is a colourless liquid which boils at 19·4°. If free from moisture it does not attack glass. Its vapour density is ten, that of hydrogen being one, showing that it contains one volume of fluorine and one volume of hydrogen in two volumes of hydrofluoric acid. It chars organic matter, and explodes when mixed with turpentine. It has a very great affinity for water, combining with a hissing noise. The hydrated acid is prepared by acting on fluorspar, CaF_2, with concentrated sulphuric acid in lead or platinum vessels. It is heated, and the vapour condensed by a freezing mixture, or, if required dilute, is passed into water. It dissolves most metals except platinum, gold, silver, and lead. It can be kept in gutta percha bottles. It attacks silicates and etches glass. It is detected by powdering the mineral, and placing it in a small lead dish, and adding concentrated sulphuric acid; the vessel is then covered with a plate of glass, which is coated with wax on the under side, on which letters are written by removing some of the wax. On heating the vessel the hydrofluoric acid is liberated, and attacks the glass where the wax has been removed.

flû-ŏr′-ĭc, *a.* [Eng., &c. *fluor(ine)*, & suff. *-ic.* (*Chem.*)]

Chem.: Containing more or less of fluorine, chiefly in the compound Hydrofluoric-acid.

flû′-or-īde, *s.* [Eng. *fluor(ine)*; *-ide.*]

Chem.: A compound of fluorine with an element or radical. Fluorides give no precipitate with argentic nitrate, as argentic fluoride is soluble in water.

¶ The following are the principal *Fluorides*: *Fluoride of Ammonium*, NH_4F. Obtained by saturating hydrofluoric acid with ammonia, and allowing the solution to evaporate over quicklime. It forms hexagonal laminæ, and crystallizes also with one molecule of HF, forming rhombic crystals of $NH_4F{\cdot}HF$. *Fluoride of Calcium:* Fluorspar, CaF_2, occurs in the bones and teeth of animals in small quantities. *Fluoride of Boron*, BF_3, is a gas. *Fluoride of Silicon*, SiF_4, is a heavy colourless fuming gas, obtained by heating a mixture of fluorspar and sand with concentrated sulphuric acid. It is absorbed by water, forming silicofluoric acid, H_2SiF_6, and gelatinous silica is deposited; the tube should dip into mercury to prevent it being blocked up. Fluorides are decomposed by chlorine, and converted into chlorides. Soluble fluorides give a gelatinous precipitate with calcium chloride. Many double fluorides have been prepared.

flû′-or-ĭn, flû′-or-ĭne, *s.* [Eng. *fluor*; *-in*, *-ine* (*Chem.*) (q.v.).]

Chem.: Symbol F, at. wt. 19. Fluorine occurs in Fluorspar, CaF_2; in cryolite, $6NaF{\cdot}Al_2F_6$, and in topaz and apatite. It has been detected in the bones, teeth, blood, and milk. It has not been isolated. A gas was obtained by the action of iodine on silver fluoride, AgF, but it was probably an iodide of fluorine. Fluorine in a free state combines readily with silicon and metals, therefore it attacks the tube in which the experiment is performed; it decomposes water, forming hydrofluoric acid, HF. Experiments with the action of chlorine on AgF in tubes made of CaF_2, yielded HF, as the silver fluoride could not be sufficiently dried. Fluorine does not combine with oxygen.

flû′-or-īte, flû′-or, *s.* [Lat. *fluor* (q.v.), and suff. *-ite* (*Min.*) (q.v.).]

Min.: An isometric, transparent, or subtranslucent brittle mineral, having many shades of colour, some specimens being white, others yellow, yet others blue or green, or more rarely red; streak white. Compos.: Fluoride of calcium—*i.e.*, fluorine, 48·7, and calcium, 51·3 = 100. Mineral phosphorescent when heated. There are two leading varieties: (1) Ordinary Fluorite—(*a*) cleavable or crystallized, (*b*) coarse to fine granular, (*c*) earthy, dull, and sometimes very soft, (*d*) chlorophane; (2) Antozonite. No. (1) includes Ratofkite (q.v.). It occurs in veins, or more rarely in beds, in metamorphic rocks, or as the gangue of metallic ores. It is found in the northern counties of England, in Cornwall, and in many foreign localities. (*Dana.*)

¶ Dana has a fluorite group of minerals, comprehending Fluorite, Yttrocerite, Fluocerite, and Fluocerine.

flû′-or-ōĭd, *s.* [Lat. *fluor*, and Gr. εἶδος (*eidos*) = form.]

Crystall.: A crystal, the superficies of which is contained by twenty-four triangles. The name Fluoride has been adopted because this form of crystal is common in fluorite.

flû′-or-ŏ-tȳpe, *s.* [Eng. *fluor*; *o* connective, & Eng. *type.*]

Photog.: A process into which fluoric acid enters in the shape of fluorate of soda.

flû′-or-oŭs, *a.* [Lat. *fluor*, and Eng., &c. suff. *-ous.*]

Min., &c.: Containing fluorite.

flû-ō-sĭl′-ĭ-cāte, *s.* [HYDROFLUOSILICATE.]

flû-ō-sĭl-ĭç′-ĭc, *a.* [Pref. *fluo-*, and Eng. *silicic.*] [HYDROFLUOSILICIC.]

* **flŭr′-bĭrd,** *s.* [Etym of first element doubtful, and Eng. *bird.*] A decoy-bird. (*Goldsmith.*)

flŭr′-rȳ, *s.* [Etym. doubtful; probably of Scandinavian origin; cf. Norweg. dial. *fluralt* = rough, shaggy; Sw. dial. *flur* = disordered hair, a whim, a caprice; *flurig* = disordered, dissolute.]

* 1. A sudden gust, blast, or storm of wind; a squall.

"The boat was overset by a sudden *flurry* from the north."—*Swift: Voyage to Lilliput.*

2. A sudden and violent shower of snow or rain.

"Like a *flurry* of snow on the whistling wind of December." *Longfellow: Miles Standish*, vii.

3. Agitation, bustle, confusion; nervous excitement.

"One is kept in perpetuall alarm and *flurry* of spirits."—*Swinburne: Travels in Spain*, let. 40.

4. (*Spec.*): When a whale which has received a fatal wound rises to the surface, spouts blood, and lashes the sea with its tail, it is said to be in its *flurry*.

flŭr′-rȳ, *a.* [FLEURY.]

flŭsh (1), *v.i. & t.* [Sw. dial. *flossa* = to burn furiously; Norweg. dial. *flosa* = passion, vehemence, eagerness. (*Skeat.*)]

A. *Intransitive:*

1. To become suffused; to redden up; to blush; to glow.

"The King said not a word, but his pale cheek *flushed*."—*Macaulay: Hist. Eng.*, ch. xxv.

* 2. To be elated or excited.

* 3. To become gay or splendid.

"At once, arrayed
In all the colours of the *flushing* year,
The garden glows." *Thomson: Spring*, 95-7.

B. *Transitive:*

1. To cause to become red or flushed; to redden.

"The soft hues
That stain the wild bird's wing, and *flush* the clouds."
Longfellow: The Spirit of Poetry.

2. To elate, to excite.

"Men are apt, especially when *flushed* with victory, to grow both warmer and bolder." — *Waterland: Works*, x. 149.

flŭsh (2), *v.i. & t.* [Fr. *flux* = "a flowing, running, a flux, a flush at cards, from Lat. *fluxus* = a flowing; *fluo* = to flow.]

A. *Intransitive:*

1. To flow swiftly, to rush.

"By the swift recourse of *flushing* blood."
Spenser: F. Q., IV. vi. 29.

2. To start with haste.

"I make 'em to *flush*,
Each owl out of his bush."
Ben Jonson: Owls.

3. To turn on a sudden rush of water for cleansing purposes.

B. *Transitive:*

1. To cause to start up or fly off: as, To *flush* a covey of birds.

"*Flushing* numbers of ptarmigan."—*Metcalfe: The Oxonian in Iceland*, p. 130.

2. To cleanse by turning on a sudden rush of water: as, To *flush* a drain.

* 3. To overwhelm by a sudden rush of water.

"A great tempestuous rage and furious storm sodaynely *flushed* and drowned xii. of his great shippes."—*Hall: Henry IV.* (an. 1).

* 4. To excite.

"Such things as can only feed his pride and *flush* his ambition."—*South: Sermons*, ii. 104.

flŭsh, *a., s., & adv.* [Flush, *v.*]

A. *As adjective:*

I. *Ordinary Language:*

* 1. Fresh, glowing, vigorous.

"All his crimes broad blown, as *flush* as May."
Shakesp.: Hamlet, iii. 3.

* 2. Full of or rich with bloom or blossoms.

3. Well-supplied; abounding. (Followed by *of.*)

"You have a passion for her pin-money; no, no, country ladies are not so *flush of* it."—*Vanbrugh: Provoked Husband*, ii. 1.

* 4. Confident: flushed.

"Both appeared quite *flush* and confident of victory."—*H. Brooke: Fool of Quality*, i. 143.

II. *Technically:*

1. *Carp.:* Having the surface unbroken or even; on the same plane or level with the adjacent surface.

2. *Cards:* In cribbage, applied to a hand consisting of cards of the same suit; holding a flush.

B. *As substantive:*

I. *Ordinary Language:*

1. A sudden flow of water.

"The pulse of the arteries is not only caused by the pulsation of the heart, driving the blood through them in manner of a wave or *flush*, but by the coats of the arteries themselves."—*Ray: On the Creation.*

2. A sudden flow or rush of blood to the face, causing a redness.

3. Any warm colouring or glow.

4. A sudden rush or impulse; a thrill or shock as of feeling.

"Success may give him a present *flush* of joy; but when the short transport is over, the apprehension of losing succeeds to the care of acquiring."—*Rogers: Sermons.*

* 5. Bloom, vigour, freshness.

"All the blooming *flush* of life is dead."
Goldsmith: Deserted Village.

6. A flock of birds suddenly started or flushed.

"Flowne at a *flush* of ducks foreby the brooke."
Spenser: F. Q., V. ii. 54.

7. Abundance.

"I thought o' the bonny bit thorn that our father rooted out o' the yard last May, when it had a' the *flush* o' blossoms on it."—*Scott: Heart of Mid-Lothian*, ch. xx.

8. A piece of moist ground; a place where water frequently lies; a morass, a bog.

II. *Cards:* In cribbage a hand consisting of cards all of the same suit.

"There was nothing silly in it [whist] like the nob in cribbage—nothing superfluous. No *flushes*, that most irrational of all pleas."—*Lamb: Elia; Mrs. Battle.*

C. *As adv.:* So as to be level, even, or flush with the adjacent surfaces.

flush-bolt, *s.*

1. A screw bolt the head of which is countersunk so that it shall not protrude from the surface of the object.

2. A sliding bolt let into the face or edge of a door so as to make an even surface therewith.

flush-deck, *s.*

Naut.: A deck running the whole length of the vessel, from stem to stern, without forecastle or poop, as in a frigate.

flush-joint, *s.*

Carp.: A joint in which the abutting parts make no projection beyond the general face of the object.

flush-panel, *s.*

Joinery: A panel whose surface comes out even with the face of the stile.

flush-wheel, *s.* A wheel used in raising water from a drain; it is shaped like a breast-wheel, but is driven by power to raise water.

flŭsh'-ĕr (1), *s.* [Ger. *fleischer* = a butcher.] A name given to *Lanius collurio*, the red-backed shrike or lesser butcher-bird.

flŭsh'-ĕr (2), *s.* [Eng. *flush* (2), v.; *-er.*] One who flushes or cleanses out, as a drain, by turning in a sudden and copious flow of water.

flŭsh'-ĭng, *s.* [Named from the place of its manufacture.] A kind of woollen material made at Flushing.

"As some stout skipper paces his deck in a suit of *flushing*."—*Reade: Cloister & Hearth*, ch. xliii.

flŭsh'-ĭng (1), *pr. par., a., & s.* [Flush (1), *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* The act or state of becoming flushed; a flush; a redness.

"Ere yet the salt of most unrighteous tears
Had left the *flushing* in her galled eyes."
Shakesp.: Hamlet, i. 22.

flŭsh'-ĭng (2), *pr. par., a., & s.* [Flush (2), *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

1. *Ord. Lang.:* The act or process of cleansing a drain by turning in a sudden and copious flow of water.

2. *Weaving:* A term applied to a thread which spans a number of other threads without intersection. Usually called Floating (q.v.). [Twill.]

* **flŭsh'-ĭng-lĭ,** *adv.* [Eng. *flushing* (1); *-ly.*] In a flushing, reddening, or blushing manner.

flŭsh'-nĕss, *s.* [Eng. *flush; -ness.*] The quality or state of being flush or flushed.

flŭs'-tĕr, *v.t. & i.* [Icel. *flaustra* = to be flustered; *flaustr* = fluster, hurry.]

A. *Trans.:* To make hot or red in the face, as with drinking; to heat, to confuse, to muddle.

"His practice of *flustering* himself daily with claret was hardly considered as a fault by his contemporaries."—*Macaulay: Hist. Eng.*, ch. xx.

B. *Intrans.:* To become heated or flustered; to be in a state of heat or excitement.

flŭs'-tĕr, *s.* [Fluster, *v.*] Heat, excitement, bustle, confusion.

"The priest need not have been in such a *fluster* with Molly."—*Fielding: Tom Jones*, bk. iv., ch. ix.

flŭs'-trą, *s.* [Lat. = the sea in its quiet state, a calm.]

Zool.: Sea-mat. A genus of Molluscoida, class Polyzoa, order Infundibulata, and family Escharidæ, if not itself the type of one (Flustridæ). The species, and especially the common one, *Flustra foliacea*, are regarded by visitors to the coast as sea-weeds, which they somewhat resemble, but the frond, which is mat-like in colour, is all dotted over with holes, each of which is inhabited by a polypide, or its offspring by gemmation, in one sense distinct yet still connected with the parent, like branches with the roots of a tree. They are found on our rocky shores abundantly. Twenty British species are known.

* **flŭs'-trą-tĕd,** *a.* [Fluster, *v.*] Tipsy, intoxicated.

"We were coming down Essex Street one night, a little *flustrated*."—*Steele: Spectator*, No. 496.

flŭs-trą'-tĭon, *s.* [Fluster, *v.*] Confusion, flurry.

"Then was this pretty little actress whom he admired in a great state of *flustration*."—*Mortimer Collins: Two Plunges for a Pearl*, vol. ii., ch. vii.

flŭs'-trĭ-dæ, flŭs'-trą-dæ, *s. pl.* [Mod. Lat. *flustr(a)*, and Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: A family of Infundibulate Polyzoa, type Flustra (q.v.).

flûte (1), ***floyt,*** **floyte,** ***flowte,** *s.* [O. Fr. *flaute, fleute;* Fr. *flûte*, from Low Lat. *flauta* = a flute, from Lat. *flatus* = a blowing; *flo* = to blow; Ital. *flauto;* M. H. Ger. *floite;* Dut. *fluit;* Sw. *flöjt;* Dan. *flöite;* Ger. *flöte, flaute.*]

I. *Ordinary Language:*

1. In the same sense as II. 2.

"Anon they move
In perfect phalanx to the Dorian mood
Of *flutes* and soft recorders." *Milton: P. L.*, i. 551.

2. A long, thin, French roll, eaten at breakfast.

3. In the same sense as II. 1.

4. A groove or channel in any material, as in a dress; a species of ruffle.

II. *Technically:*

1. *Architecture:*

(1) A long vertical groove in the shaft of a column. It is usually circular in section, but, when angular, the shaft is called a canted column. The Doric column has twenty flutes; the Corinthian, Ionic, and composite have each twenty-four flutes; the Tuscan is without them.

"According to the compass and station of the column, the *flutes* may be augmented to thirty and above."—*Evelyn: Architecture.*

(2) A hollow, concave chamfer, gutter, groove, or channel; the receding member of a compound moulding.

2. *Music:*

(1) One of the most widely used of ancient musical instruments, and at this day one of the most important instruments in an orchestra. Of tubes without reeds there are only two kinds—the flute played by a mouth-piece, and that played by placing the lips close

FLUTE.

against a hole on one side. The former kind was formerly called *flûte à bec;* the latter, *flûte traversière*, or *flauto traverso*, the cross-flute. The flageolet, which still is in use, is a a familiar example of a *flûte à bec*, but it is the smallest of its kind, for these instruments were at one time made sufficiently large to be called "tenor" and "bass" flutes; and complete four-part harmony could be obtained from a set. The larger kinds only exist now as curiosities.

(2) A stop on an organ. They are of two kinds, open and stopped, and are equally common in metal and wood. (*Stainer & Barrett.*)

flute-bit, *s.* A wood-boring tool adapted to be used in a brace, and used in boring ebony, rosewood, and other hard woods.

flute-like, *a.* Resembling a flute in tone; clear and mellow.

flute-organ, *s.*

Music: An organ in which the sound is produced by the action of wind on a cutting edge, in contradistinction to the reed-organ, in which the sound is produced by a vibrating tongue of metal. It is also called the mouth-organ, and the mouth or flute-pipes are technically known as flues; a contraction of flutes.

flute-pipes, *s.*

Music: An organ-pipe having a sharp lip or wind-cutter which imparts vibrations to the column of air in the pipe, producing a musical note. [Mouth-pipe.]

flute-player, *s.* A flutist or flautist.

flute-stop, *s.* [FLUTE, *s.*, II. 2 (2).]

¶ *Armed en flûte:* Having the guns in part taken out, as when used as a transport. (Said of a vessel of war.)

flûte (2), *s.* [A corruption of *float* or *flote* (q.v.).] A long vessel or boat, having flat ribs or floor timbers, round behind and swelled in the middle.

* **flûte,** * **floit-en,** * **floyt-en,** * **flowt-yn,** *v.i. & t.* [O. Fr. *flauter, fleuter;* M. H. Ger. *floiten, flöuten;* Dut. *fluiten;* Low Ger. *floiten, fleiten;* Ger. *flöten.*]

A. *Intransitive:*

1. To play upon a flute or pipe.

"Syngynge he was, or *floweynge,* al the day."
Chaucer: C. T., 9L.

2. To whistle with a flute-like note.

B. *Transitive:*

1. To play on a flute; to play or sing with flute-like notes.

"*Fluting* a wild carol ere her death."
Tennyson: Passing of Arthur.

2. To form flutes or channels in; as in a column.

flût'-ĕd, *pa. par. & a.* [FLUTE, *v.*]

1. *Arch.:* Having channels or flutes in it; channelled, furrowed: as, a *fluted* column.

2. *Music:* Clear and mellow; flute-like: as, *fluted* notes.

flût'-ęn-ĭst, *s.* [Eng. *flute; -n* connective, and suff. *-ist.*] A flute player; a fluter.

"There sometimes *flutenists*
Bear office now." *Stapylton: Juvenal,* iii. 42.

flût'-ĕr, *s.* [Eng. *flute* (1); *-er.*]

1. One who plays upon a flute; a flautist.

2. One who makes flutes or grooves.

* **flût'-ĕr-ĕss,** * **flût'-ĕr-ĕsse,** *s.* [Eng. *fluter; -ess.*] A woman who plays on the flute. (*Sherwood.*)

flû-tī'-nạ, *s.* [Ital. *flautino* = a small flute, dimin. of *flauto* = a flute.]

Music: A kind of accordeon resembling the concertina. A form of melodeon. An instrument worked by a bellows and keys in bank, and having one set of reeds.

flût'-ĭng, *pr. par., a., & s.* [FLUTE, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

1. The act of forming flutes or grooves in.

2. A flute; a groove; a channel; fluted work.

"The caulicull . . . fall exactly with the hollow of the *flutings.*"—*Evelyn: Architecture.*

3. A species of ruffle.

4. One of the longitudinal grooves in a screw-tap, giving cutting-edges to the thread.

fluting-cylinder, *s.* A cylinder having longitudinal grooves to corrugate, crimp, or flute thin sheet-metal plates or fabrics. [FLUTING-MACHINE.]

fluting-iron, *s.* A species of laundry-iron which flutes the clothes; an Italian-iron; a gauffering-iron.

fluting-lathe, *s.* A kind of lathe for cutting flutes or scrolls upon columns or balusters. The flute proper is the vertical groove in a column or pillar, but the flute of the lathe is a spiral.

fluting-machine, *s.* A machine for corrugating or crimping metals. It has a pair of rollers, each one having projections which enter the interdental spaces of the other. By turning the operating screw, the bent bar, and with it the upper roller, can be adjusted up or down at will to regulate the distance between the two rollers.

fluting-plane, *s.*

Joinery: A plane adapted to cut grooves.

flût'-ĭst, *s.* [Eng. *flut(e); -ist.*] One who plays upon the flute; a flautist.

flŭt'-tĕr, *v.i. & t.* [A.S. *floterian, flotorian* = to float about; *flot* = the sea; cogn. with Low Ger. *fluttern* = to flutter about; Ger. *flattern;* Dut. *fladderen* = to hover.] [FLOAT, *v.*]

A. *Intransitive:*

1. To flap the wings rapidly; to hover.

"As an eagle stirreth up her nest, *fluttereth* over her young, and spreadeth abroad her wings, so the Lord alone did lead him."—*Deuteronomy* xxxii. 11.

2. To move about with a show of great bustle, but without much result.

3. To be moved with quick vibrations; to flap about.

"The yards are all hoisted,
The sails *flutter* out."
Longfellow: Musician's Tale.

4. To be in a state of agitation, doubt, or uncertainty; to hesitate; to wander.

"His thoughts are very *fluttering* and wandering, and cannot be fixed attentively to a few ideas successively."—*Watts.*

5. To act the beau or a frivolous character.

"No rag, no scrap of all the beau or wit,
That once so *fluttered,* and that once so writ."
Pope: Dunciad, ii. 119, 120.

B. *Transitive:*

1. To move about with quick vibrations; to flap: as, A bird *flutters* its wings.

* 2. To disturb, to drive in disorder, to confound.

"Like an eagle in a dovecote, I
Fluttered your Volscians in Corioli."
Shakesp.: Coriolanus, v. 5.

3. To put into a state of agitation, alarm, or anxiety.

¶ For the difference between to *flutter* and to *palpitate,* see PALPITATE.

flŭt'-tĕr, *s.* [FLUTTER, *v.*]

1. Quick, short, and irregular vibrations; a flapping or moving rapidly.

"An infinite variety of motions are to be made use of in the *flutter* of a fan: there is the angry *flutter,* the modest *flutter,* and the timorous *flutter.*"—*Addison: Spectator,* No. 102.

2. A state of excitement, anxiety, or agitation; disorder, confusion.

"Lest their various and jangling opinions put their leaves into a *flutter.*"—*Milton: Remonstrants' Defence.*

flutter-wheel, *s.* A water-wheel of moderate diameter, placed at the bottom of a chute so as to receive the impact of the head of water in the chute and penstock. Its name is derived from its rapid motion.

flŭt'-tĕr-ĕr, *s.* [Eng. *flutter; -er.*] One who flutters.

flŭt'-tĕr'-ĭng, *pr. par., a., & s.* [FLUTTER, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* The act of shaking or moving rapidly; a flapping about; a putting into a state of agitation, anxiety, or excitement.

* **flŭt'-tĕr-ĭng-lў,** *adv.* [Eng. *fluttering; -ly.*] In a fluttering manner.

flût'-ў, *a.* [Eng. *flut(e)* (1); *-y.*] Resembling a flute in tone; flute-like.

flû'-vĭ-ạl, *a.* [Fr. *fluvial;* Lat. *fluvialis,* from *fluvius* = a river.] The same as FLUVIATILE (q.v.).

flû-vĭ-ā'-lēẹ, *s. pl.* [M. or f. pl. of Lat. *fluvialis* = pertaining to a river.]

Bot.: The name given by Ventinat and Richard to an order of Endogens since merged in Naiadaceæ (q.v.). The old genus Fluvialis is now made a synonym of Najas.

† **flû'-vĭ-ạl-ĭst,** *s.* [Lat. *fluvial(is),* pertaining to a river, and Eng., &c. suff. *-ist.*]

Geol.: One who in explaining certain phenomena attributes nearly everything to the action of existing rivers.

flû-vĭ-ăt'-ĭc, *a.* [Lat. *fluviaticus* = pertaining to a river.] The same as FLUVIATILE (q.v.).

flû'-vĭ-ạ-tīle, *a.* [Lat. *fluviatilis* = pertaining to rivers.]

1. *Geog. & Geol.:* Belonging to a river.

2. *Zool.:* Living in a river: as, *fluviatile* shells.

flû-vĭ-cō-lĭ'-nœ, *s. pl.* [Lat. *fluvius* = a river, and *colo* = to inhabit.]

Ornith.: The same as ALECTRURINÆ (q.v.).

flû'-vĭ-ō-mạ-rīne, *a.* [Lat. *fluvius* = a river, and *marinus* = marine, from *mare* = the sea.] Related to both a river and the sea.

fluviomarine strata, *s. pl.*

Geol.: Strata laid down in the bed of the sea by an adjacent river.

flŭx, * **flĭx,** *s. & a.* [Fr. *flux,* from Lat. *fluxus* = a flowing, from *fluo* = to flow; Sp. & Port. *fluxo;* Ital. *flusso.*]

A. *As substantive:*

I. *Ordinary Language:*

1. The act or state of flowing; the motion of a liquid.

"Still and calm; no noise, no *flux* of waters."
Beaum. & Fletc.: Pilgrim, iii. 4.

2. Any flow or issue of matter.

"Civet is the very uncleanly *flux* of a cat."
Shakesp.: As You Like It, iii. 2.

3. Fusion; a liquid state caused by the application of heat.

* 4. A passing away, and giving place to others.

"Amid the *flux* of many thousand years."
Thomson: Summer, 85.

* 5. A coming together, concourse, or confluence.

"Left and abandoned of his velvet friends;
'Tis right, quoth he: thus misery doth part
The *flux* of company."
Shakesp.: As You Like It, ii. 1.

II. *Technically:*

1. *Hydrog.:* The flow of the tide, as opposed to the ebb or reflux.

"To mark the *flux* and reflux of its waters."—*Louth: Lectures,* vol. i., lect. 2.

2. *Med.:* An extraordinary issue or discharge from the bowels, &c.; as, the bloody *flux,* &c.; dysentery.

"The next year was calamitous, bringing strange *fluxes* upon men and murrain upon cattle."—*Milton: Hist. Eng.,* bk. vi.

3. *Metall.:* A name given to any substance which assists the fusion of minerals. Crude flux is a mixture of nitrate of potassium and tartar, which is put into the crucible with the substance intended to be fused. White flux is formed by projecting equal parts of a mixture of nitre and tartar, in small portions at a time, into an ignited crucible. Black flux is prepared in the same manner, but with double the amount of tartar, so that carbon is contained in the mixture; it is used to reduce metallic ores. Cyanide of potassium is used as a fusing and reducing agent. Minerals are fused with a mixture of potassium and sodium carbonates, which melts more easily than either of them alone.

* **B.** *As adjective:*

1. Unconstant; not durable, variable; maintained by a constant succession of parts.

"One argument for such a translation is the *flux* nature of living languages."—*Abp. Newcombe: Essay on Translation of the Bible,* p. 233.

2. Transient; not of permanent importance.

"Written upon a subject *flux* and transitory."—*Johnson: Life of Sprat.*

flux-spoon, *s.*

Metall.: A small ladle for dipping out a sample of molten metal to be tested.

* **flŭx,** *v.t.* [FLUX, *s.*]

I. *Ordinary Language:*

1. To melt, to fuse.

"*Fluxing* ores, running glass, and assisting us in many of our operations."—*Paley: Natural Theology,* ch. xxi.

2. To kill or get rid of by a flux.

"He might fashionably and genteelly have been dwelled or *fluxed* into another world."—*South.*

3. To purge, to clear.

"'Twas he that gave one Senate purges,
And *fluxt* the House of many a burgess."
Butler: Hudibras, pt. ii., c. i.

II. *Med.:* To cause a flux or evacuation; to salivate.

"But what can salivation do?
It has been *fluxt* and refluxt too."
Byron: Verses on an Old Bob-wig.

* **flŭx-ā'-tion,** *s.* [Eng. *flux; -ation.*] A flowing or passing away, and giving place to others.

"They believe a continual *fluxation* and transmigration of souls from eternity."—*Leslie: Short Method with the Deists.*

* **flŭx-ĭ-bĭl'-ĭ-tў,** *s.* [Low Lat. *fluxibilitas,* from *fluxibilis.*]

1. The quality of being fluxible or capable of fusion.

2. Changeableness, variableness, inconstancy, mutability.

"The *fluxibility* of human nature is too great."—*Hammond: Works,* ii. 603.

* **flŭx'-ĭ-ble,** *a.* [Low Lat. *fluxibilis,* from Lat. *fluxus.*]

1. Capable of being fused or melted, as a mineral.

2. Changeable, variable, inconstant, mutable.

"The matter is variable, mutable, alterable, and *fluxible*."—*P. Holland: Plutarch*, p. 666.

***flŭx'-ĭ-ble-nĕss**, *s.* [Eng. *fluxible*; *-ness*.] The quality of being fluxible; fluxibility.

***flŭx'-ĭle**, *a.* [Low Lat. *fluxilis*, from Lat. *fluxus* = a glowing.] Fluxible; capable of being fused or melted.

***flŭx-ĭl'-ĭ-tŷ**, *s.* [Eng. *fluxil(e)*; *-ity*.] Fluxibility; capability of being fused or melted.

"The weight and fluidity, or at least *fluxility* of the bodies here below."—*Boyle: Works.*

fluxion (as **flŭk'-shŭn**), *s.* [Lat. *fluxio*, from *fluxus*, pa. par. of *fluo* = to flow.]

* I. *Ordinary Language:*

1. The act or state of flowing.

"By the *fluxion* of the odour coming from the beast."—*P. Holland: Plutarch*, p. 788.

2. That which flows.

"The *fluxion* increased, and abscesses were raised."—*Wiseman.*

3. The fusion or running of metals into a fluid state.

4. A constantly varying indication.

II. *Technically:*

1. *Med.:* An unnatural flow or determination of blood or other humour towards any organ; a catarrh.

* *Math.:* A method of calculation resulting from the operation of fluents, or flowing numbers. Thus a mathematical line may be considered as produced by the fluxion or flowing of a point; a surface by the fluxion of a line, and a solid by the fluxion of a surface. A mathematical point in motion will really make a line; a revolving radius which is a line will make a circle which is a surface, and its revolution about its diameter will generate a sphere which is a solid. The same principle may be applied to purely numerical calculations, like the formulæ of algebra. If of two quantities, x and y, the increase of x at a uniform and given rate produces an increase or decrease of y; and if x' and y' represent the velocities of x and y respectively, then y' is equal to the function of x and y depending on the equation connecting them, the whole multiplied by x'. In this formula x and y were called by Newton fluents, and x' and y' their fluxions. This branch of the higher mathematics was invented by Newton in A.D. 1665. On October 24, 1676, he communicated his method to Oldenburg in a sentence with all the letters disarranged so that his correspondent could not possibly have put them in order. If he had succeeded in doing this the sentence would have been "Data æquatione quotcunque fluentes quantitates involvente fluxiones invenire et vice versâ." Leibnitz received this letter in 1677, and in 1684 explained a discovery which he had made. It was that of the differential calculus, which was essentially the same as that of fluxions. What Newton called fluxions, Leibnitz called differences. An angry controversy subsequently arose between Newton and Leibnitz as to priority of discovery, the Royal Society of London taking the part of the former, who was then its president, and the scientific men of Germany that of the latter, who was their countryman. Both appear to have made the discovery independently. In the slight differences of method which exist, the advantage lay with Leibnitz, and while the term fluxions is now scarcely ever used, that of differential calculus is in common use. The first elementary treatise on fluxions published in England was by John Harris, in A.D. 1702. A description of the process by Newton himself followed in 1704, in his *Quadrature of Curves.*

fluxional, fluxionary (as **flŭk'-shŭn-al, flŭk'-shŭn-ar-ŷ**), *a.* [Eng. *fluxion*; *-ary*.] Pertaining to fluxions.

"You may apply the rules of the *fluxionary* method."—*Berkeley: Analyst*, § 32.

fluxionary calculus, *s.*

Math.: The calculus by the method of fluxions.

fluxional or **fluxionary analysis**, *s.*

Math.: The analysis of flowing quantities and fluxions.

***fluxionist** (as **flŭk'-shŭn-ĭst**), ***flŭc'-tion-ĭst**, *s.* [Eng. *fluxion*; *-ist*.] One skilled in fluxions.

"An algebraist *fluctionist*, geometrician, or demonstrator of any kind."—*Berkeley: Analyst*, § 32.

***flŭx'-ĭve**, *a.* [Eng. *flux*; *-ive*.]

1. Flowing, running, as with tears.

"These often bathed she in her *fluxive* eyes." *Shakesp.: Lover's Complaint*, 50.

2. Variable, changeable, inconstant.

"Their arguments are as *fluxive* as liquor spilt upon a table."—*Ben Jonson: Discoveries.*

***flŭx'-üre**, *s.* [Lat. *fluxura* = a flowing.]

1. The quality of flowing or of being fluid.

"In itself holds these two properties
Moisture and *fluxure*."
Fielding: Covent-Garden Journal, No. 55.

2. A fluid matter.

flȳ, ***fleg-en**, ***fleghe**, ***flee**, ***fle-on**, ***flie**, ***fligh**, ***flye**, ***flyghe**, **flyyn** (pa. t. **fleigh*, **fleyghe*, *flew*, **floghe*, **flughe*, **fluwe*; pa. par. **flogen*, **flone*, **flowen*, *flown*), *v.i.* & *t.* [A.S. *fleógan* (pt. t. *fleáh*); cogn. with Dut. *vliegen*; Icel. *fljúga*; Dan. *flyve*; Sw. *flya*; O. H. Ger. *fliogan*; M. H. Ger. *vliegen*; Low Ger. *fleigen*; Ger. *fliegen*.]

A. *Intransitive:*

1. To move or pass through the air with wings.

"Doth the hawk *fly* by thy wisdom?"—*Job* xxxix. 26.

2. To pass or be driven through the air by any impulse: as, An arrow *flies* through the air.

3. To rise in the air; to mount upwards, as smoke in the air.

"Man is born unto trouble, as the sparks *fly* upwards."—*Job* v. 7.

4. To flutter or wave in the air.

"Bells were ringing, flags were *flying*, candles were arranged in the windows for an illumination."—*Macaulay: Hist. Eng.*, ch. xv.

5. To move with rapidity: as, A wheel *flies* round.

6. To flee, to run away.

"Ah, whither shall I *fly* to 'scape their hands." *Shakesp.: 3 Henry VI.*, i. 3.

7. To pass or move swiftly; to hasten; to hurry.

"In the morning early will we both *fly* towards Belmont." *Shakesp.: Merchant of Venice*, iv. 1.

8. To pass away quickly: as, Time *flies*.

9. To be spread rapidly: as, The report *flew* through the city.

10. To break, to shiver, to burst in sunder: as, A bottle *flies* in pieces.

*11. To travel by a fly.

"We then *flied* to Stogursey."—*Southey: Letters*, iii. 478.

B. *Transitive:*

1. To cause to fly or float in the air: as, To *fly* a kite.

2. To flee from; to run away from; to avoid; to shun.

"Pursuing that which flies, and *flying* what pursues." *Shakesp.: Merry Wives of Windsor*, ii. 2.

3. To quit or escape from by flight.

"Dedalus, to *fly* the Cretan shore,
His heavy limbs on jointed pinions bore."
Dryden: Virgil; Æneid vi. 18.

*4. To attack or hunt with a hawk.

"If a man can tame this monster, and with her *fly* other ravening fowl, and kill them, it is somewhat worth."—*Bacon.*

*5. To carry or convey in a fly.

"Poole *flied* us all the way."—*Southey: Letters*, iii. 478.

¶ (1) *To fly about:* To change or shift frequently; said of the wind.

(2) *To fly at:* To rush with violence or fierceness at; to attack suddenly.

(3) *To fly in the face of:*

(a) To insult.

"This would discourage any man from doing you good, when you will either neglect him, or *fly in his face*."—*Swift: Drapier's Letters.*

(b) To act in direct opposition to; to set at defiance.

(4) *To fly off:*

(a) To become suddenly detached or separated.

* (b) To revolt; to fall away; to desert.

"The images of revolt and *flying off*." *Shakesp.: Lear*, ii. 2.

(5) *To fly open:* To open suddenly and violently: as, The doors *flew open*.

(6) *To fly out:*

(a) To burst into passion.

"Passion is apt to ruffle, and pride will *fly out* into contumely and neglect."—*Collier: Of Friendship.*

(b) To break out into licence.

(c) To start violently from any direction.

"All bodies, moved circularly, have a perpetual endeavour to recede from the centre, and every moment would *fly out* in right lines, if they were not restrained."—*Bentley: Sermons.*

7. *To let fly:*

(1) *Transitive:*

(a) *Ord. Lang.:* To discharge, to shoot or throw out.

"A quarelle *lete* he *flie*." *Langtoft*, p. 235.

(b) *Naut.:* To let go suddenly: as, To *let fly* the sheets.

(2) *Intrans.:* To direct a violent blow.

8. *To fly a kite:* To obtain money or accommodation bills. (*Comm. Slang.*)

flȳ, ***fle**, ***flee**, ***fleh**, ***flel**, ***fley**, ***fleye**, ***flye**, *s.* [A.S. *fleóge*; cogn. with Dut. *vlieg*; Low Ger. *fleige*; O. H. Ger. *flioga*; M. H. Ger. *vliege*; Icel. & Sw. *fluga*; Dan. *flue*.]

I. *Ordinary Language:*

1. *Literally:*

(1) In the same sense as II. 1.

(2) A disease in turnips, hops, &c.

"To prevent the *fly*, some propose to sow ashes with the seed."—*Mortimer: Husbandry.*

(3) An artificial fly or insect used as a bait for fishes.

"There is scarcely a turn of the pass at which may not be seen some angler casting his *fly* on the foam of the river."—*Macaulay: Hist. Eng.*, ch. xiii.

2. *Figuratively:*

(1) That part of a vane which shows the direction in which the wind blows.

(2) The length of a flag from the staff to the outer edge; the perpendicular height is the Hoist.

(3) The part of a flag beyond the Jack, which occupies the upper left-hand corner.

(4) A kind of open or close carriage drawn by one horse; a hackney coach.

*(5) A familiar spirit.

"In casting figures, telling fortunes, news,
Selling of *flies*." *Ben Jonson: Alchemist.* (Argum.)

¶ In the seventeenth century familiar spirits in the shape of fleas or lice were supposed to attend witches and wizards, who also professed to be able to sell imps of this kind, whose power varied in proportion to the price paid for them. Thus Dapper in the *Alchemist*, having little money to spare, wants only

"A rifling *fly*, none of your great familiars."

Sidrophel's "talismanic louse," is a well-known example of more repulsive insects being supposed to entertain demoniac guests.

*(6) A thing of the slightest importance or value.

"Alein answered: I count him nat a *flie*." *Chaucer: C. T.*, 4,190.

II. *Technically:*

1. *Zoology:*

(1) *Specially:*

(a) (*Sing.*): The genus Musca, of which the House-fly, *Musca domestica*, is the type.

(b) (*Pl.* flies): (i) The family Muscidæ, of which the genus Musca is the type; (ii) the order Diptera (two-winged Insects).

(2) *Gen.* (Chiefly as the second word in a compound): Almost any flying insect, especially if with membraneous transparent wings. Thus butterflies are Lepidoptera, gall-flies chiefly Hymenoptera, dragon-flies Orthoptera, crane-flies Diptera, and Spanish-flies and turnip-flies Coleoptera. It is, however, only a small number of species in the last-named order that are called flies.

2. *Hor.:* A regulating device used formerly in clocks, and latterly in musical boxes, to control the rate of speed

3. *Knitting-machine:* Another name for the Latch (q.v.).

4. *Mach.:* A fly-wheel (q.v.).

5. *Naut.:* A compass-card having marked upon it the points or rhumbs, thirty-two in number. The card is moved by a magnet-needle beneath. The angle of the ship's course with the magnetic meridian is shown on the marginal plate by a line called the lubber's line.

6. *Print.:* A vibrating frame with fingers, taking a printed sheet from the tapes, and delivering it on to the heap.

7. *Spin.:* The arms which revolve around the bobbin in a spinning-frame, to twist the roving or yarn which is wound on the bobbin. [FLYER.]

8. *Theat.:* A gallery running along the side of the stage at a high level, where the ropes for drawing up parts of the scenes, &c., are worked.

9. *Weaving:* A shuttle driven through the shed by a blow or jerk.

fly-agaric, *s.*

Bot.: Agaricus muscarius, a scarlet fungal covered with white or yellow warts. It grows in birch woods, and is used to poison flies.

fly-block, *s.*

Naut.: A large flat block, double or single. The double block sometimes has two sheaves at one part and one sheave in the other portion. Used in the hoisting-tackle of yards.

fly-board, *s.*

Print.: The board upon which the printed sheets are laid by the fly.

fly-boat, *s.*

1. A vessel used for rapid transport of goods, &c. [FILIBUSTER.]

"We had leave to depart with a *fly-boat* laden with sugar."—*Hackluyt: Voyages*, vol. ii., pt. ii., p. 132.

2. A rapid passenger boat on canals.

3. A large, flat-bottomed Dutch coasting-vessel.

fly-book, *s.* A case in the form of a book consisting of small pieces of flannel, used by anglers to keep artificial flies in.

fly-boy, *s.*

Print.: The boy who lifts the printed sheets off the press, catching them as they fly from the tympan.

fly-bug, *s.*

Entom.: Reduvius personatus, a kind of winged bug which devours the bed-bug.

fly-cap, *s.* A cap or head-dress formerly worn by elderly ladies. It was formed of two crescents conjoined, and by means of wires made to stand out from the cushion on which the head was dressed. The name is taken from the resemblance of the sides to wings.

† **fly-case,** *s.*

Entom.: The wing-cases of a "fly," a beetle for example.

fly-drill, *s.* A kind of drill having a reciprocating fly-wheel which gives it a steady momentum. The driving power consists of a cord winding in reverse directions upon the spindle as it rotates, first in one direction and then in the other.

fly-fungus, *s.*

Bot.: Empusa muscæ.

fly-governor, *s.* A kind of governor which regulates speed by the impact of vanes upon the air; a fly.

fly-honeysuckle, *s.*

Bot.: A modern book-name for *Lonicera Xylosteum.*

fly-leaf, *s.* A blank leaf at the beginning or end of a book, or of a circular, &c.

fly-maggot, *s.* A maggot bred from the eggs of the blow-fly.

fly-man, *s.* The driver of a fly.

fly-net, *s.*

1. *Ord. Lang.:* A net in an open window to prevent entrance of flies and other insects.

2. *Manège:* A net of meshes, or a fringe of leather strips, to protect a horse from flies.

fly-nut, *s.* A nut with wings, to be twisted by the hand; as the screw-nut of a hand-vice.

fly-orchis, flie-orchis, *s.*

Botany:

* 1. *Gen.:* Various species of Habenaria and Ophrys.

2. *Spec.: Ophrys muscifera.*

fly-poison, *s.*

Bot.: Amianthium muscatoxicum.

fly-powder, *s.* A powder consisting of arsenic mixed with sugar and water, used to kill flies.

fly-press, *s.* A screw-press in which the power is derived from a weighted arm, swinging in a horizontal plane, as in embossing and die presses. Presses of this kind are used for making buttons, washers, flat links for chains, cutting and gumming saw-teeth, making percussion-caps, steel-pens, &c.

fly punching-press, *s.* A press for cutting teeth on saws, and for other purposes.

fly-rail, *s.* A hinged cleat or bracket, attached to the frame of a table, and turned out to support the leaf.

fly-sheet, *s.*

1. *Gen.:* A paper broadside or bill.

2. *Spec.* (*Pl.*)*:* Certain publications of this sort advocating changes in the Wesleyan Methodist constitution and practice. Those who were suspected of having them issued were expelled in 1849, and taking the name of Methodist Reformers laid the foundation of a new denomination, which has, however, since been amalgamated with others, the designation of the collective body being the United Free Church Methodists.

fly-shuttle, *s.* A shuttle driven by a picker, in contradistinction to one thrown by hand.

* **fly-slow,** *a.* Moving slowly.

"The *fly-slow* hours shall not determinate
The dateless limit of thy dear exile."
Shakesp.: Richard II., i. 3.

fly-speck, *s.* A speck or stain on glass, &c., caused by the excrement of the common house-fly.

fly-water, *s.* A liquid composed of a solution of arsenic, quassia bark, &c., used for killing flies.

fly-wheel, *s.*

Mach.: A heavy wheel attached to machinery to equalize the movement. By its inertia it opposes any sudden acceleration of speed, and by its momentum it prevents sudden diminution of speed; in the latter case it acts as a store of power to continue the movement when the motor temporarily flags, or in passing dead centres when the motor is inoperative. Fly-wheels are also used to accumulate power.

flȳ, *a.* [Etym. doubtful.] Sharp, wide awake.

flȳ´-bāne, *s.* [Eng. *fly*, and *bane.*]

Bot.: Agaricus muscarius.

flȳ´-bĭt-ten, *a.* [Eng. *fly*, and *bitten.*] Marked by the bites of flies.

flȳ-blōw, *v.t. & i.* [Eng. *fly*, and *blow.*]

A. *Transitive:*

1. *Lit.:* To deposit eggs in, as the blowfly in meat.

* 2. *Fig.:* To corrupt, to taint.

"I am unwilling to believe that he designs to play tricks, and to *flyblow* my words, to make others distaste them."—*Stillingfleet.*

B. *Intrans.:* To deposit eggs on meat, as the blowfly.

flȳ´-blōw, *s.* [FLYBLOW, *v.*] The egg of a blowfly.

flȳ´-blōwn, *a.* [FLYBLOW, *v.*] Tainted with maggots; stained by flies; impure, putrid.

"Him that thou magnifiest with all these titles,
Stinking and *flyblown*, lies here at our feet."
Shakesp.: 1 Henry VI., iv. 7.

flȳ´-căt̨ch-ẽr, *s.* [Eng. *fly*, and *catcher.*]

1. *Ord. Lang.:* One that hunts or catches flies.

"The swallow was a *flycatcher* well as the spider."—*L'Estrange.*

2. *Ornithology:*

(1) *Sing.:* The genus Muscicapa, the typical one of the family Muscicapidæ (q.v.). Two species occur in Britain. The Spotted Fly-catcher (*Muscicapa griseola*) is brown above, with a few dark spots on the top of its head, below it is dull white, the throat and breast streaked with brown; length about six inches. It comes to England from the Continent in May, makes a beautiful nest in various situations, some of them of odd character, and lays four or five eggs, which are bluish-white spotted with red. The other British species is the Pied Fly-catcher (*Muscicapa atricapilla*), a rarer bird.

(2) *Pl.:* The Muscicapidæ, a family of Insessorial Birds of the tribe Dentirostres. They have a wide gape of mouth, which is bordered with bristles, and short, feeble legs. [MUSCICAPIDÆ.]

¶ *Tyrant fly-catchers:* [TYRANNINÆ].

flȳ´-ẽr, *s.* [FLIER.]

flȳ´-fĭsh, *v.i.* [Eng. *fly*, and *fish*, v.] To angle with a hook baited with a natural or an artificial fly.

flȳ´-fĭsh-ĭng, *s.* [Eng. *fly*, and *fishing.*] The act or art of angling with flies, natural or artificial.

"I shall next give you some other directions for *fly-fishing.*"—*Walton: Angler*, pt. i., ch. ii.

flȳ´-flăp, *s.* [Eng. *fly* and *flap.*] An instrument to drive away flies.

flȳ´-flăp-pĕr, *s.* [Eng. *flyflap; -er.*]

1. One who drives away flies with a flyflap.

2. A flyflap (q.v.).

flȳ´-ĭng, *pr. par., a., & s.* [FLY, *v.*]

A. & B. *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

1. The act or power of moving through the air with wings.

2. The act of fleeing or running away.

flying-army, *s.*

Milit.: A body of soldiers, not lying in a fixed camp, but constantly moving about, either to protect their own garrisons and posts, or to harass the enemy; a flying-camp.

flying-artillery, *s.*

Milit.: Field artillery when the gunners are all mounted; either on horses, or on the limbers.

flying-birds, *s. pl.*

Ornith.: The sub-class Carinatæ.

flying-bridge, *s.* A temporary bridge, suspended or floating. A military, pontoon, or boat bridge.

flying-buttress, *s.*

Arch.: A structure in the form of an arch, spanning the roof of an aisle between an outer buttress and the wall of the nave. It assists in resisting the thrust of the roof.

flying-camp, *s.* [FLYING-ARMY.]

flying-dragon, *s.*

1. *Ord. Lang.:* A paper kite.

FLYING-DRAGON.

"*Flying-dragons*, very common in Edinburgh in harvest. They are generally guided by very young boys, with a chain no stronger than a piece of slight packing twine."—*Blackwood's Magazine*, Aug., 1821, p. 35.

2. *Zool.:* The same as FLYING-LIZARD (q.v.).

Flying-Dutchman, *s.*

1. *Mythol.:* A phantom Dutch ship supposed to be encountered off the Cape of Good Hope. The origin of the myth is doubtful. The popular explanation is that, on account of a murder committed on board his vessel, or a boastful exclamation of his own, a captain was doomed to beat in a phantom ship against storms till the day of judgment. Another explanation is that a Dutch vessel with all hands was lost off the Cape of Good Hope, of old called the Cape of Storms; but, if the apparition be seen at all, it is probably due to refraction.

2. A nickname applied, on account of its speed, to the express train running from London to Exeter.

¶ Two other very fast trains are nicknamed the Flying Scotchman (q.v.), and, not the Flying, but the Wild Irishman. The last-mentioned train runs from London to Holyhead, en route for Dublin.

flying-fish, *s.*

Ichthy. & Ord. Lang.: The name given to more than one fish which, having extended fins, leaps from the water, and after a more or less lengthened flight, drops into it again. The fins seem to act as parachutes rather than as wings. The Common Flying-fish is *Exocœtus volitans.* It belongs to the family Esocidæ. Another closely allied species is *E. exiliens*, the Greater Flying-fish. Both have straggled to the British seas. They are abundant in the Mediterranean. For another flying-fish of a distinct genus, see Flying-gurnard.

flying-fox, *s.* *Pteropus rubricollis*, a large frugivorous bat, occurring in the East Indies, where it commits great depredations in gardens. Its head somewhat resembles that of the fox.

flying-frog, *s.*
Zool.: The genus Rhacophorus. It has large webbed feet with adhesive discs.

flying-gurnard, *s.*
Ichthy.: A fish, *Dactylopterus volitans*, inhabiting the Mediterranean. There is another species of the genus, *D. orientalis*, from the Eastern seas. The genus is spiny-finned and of the family Triglidæ. [DACTYLOPTERUS.]

flying-jib, *s.*
Naut.: A sail extended by the flying jib-boom beyond the standing jib.

FLYING-JIB.
A. Flying-jib. B. Standing-jib.

flying jib-boom, *s.*
Naut.: An extension of the jib-boom. It is sometimes in one piece with the latter, and sometimes connected therewith by means of a boom-iron, in a manner analogous to that of the jib-boom on the bowsprit.

flying-lemur, *s.*
Zool.: The genus Galeopithecus, and especially *G. volans*, found in Malacca, Sumatra, and Borneo. It is so called from having a membrane which enables it to take long leaps through the air. [GALEOPITHECUS.]

flying-lizard, *s.* Various species of the genus Draco (q.v). [PTEROSAURIA.]

flying-levels, *s.*
Civ. Eng.: Trial levels taken over the line of a projected road, railway, &c.

flying-man, *s.* The name taken by a Belgian, M. Von Groof, who, attempting to descend from a balloon by wings designed to act as a parachute, found his apparatus fail, and was killed by the fall, on July 9, 1874. [FLYING.]

flying-party, *s.*
Mil.: A detachment of men employed in skirmishing round an enemy.

flying-phalanger, *s.*
Zool.: The marsupial genus Petaurus, belonging to the family Phalangastidæ (Phalangers). A fold of skin connects the fore and hind limbs with the sides. This enables them to take long flying leaps.

flying-pinion, *s.*
Horol.: The fly of a clock. [FLY, *s.*, B. 2.]

flying-sap, *s.*
Mil.: The rapid excavation of the trenches of an attack, when each man advances under cover of two gabions.

Flying-Scotchman, *s.* A nickname for the express train running between London and Edinburgh.

flying-sheets, *s. pl.*
Bibliog.: Broadsheets.
"The King's Tracts in the British Museum abound in chap-books and *flying-sheets*."—*Athenæum*, Sept. 2, 1882.

flying-shot, *s.* A shot fired at something in motion, as a bird on the wing; one who fires such a shot.

flying-squid, *s.*
Zool.: An appellation given by sailors to the cephalopodous molluscs belonging to the genus Ommastrephes, of which fourteen recent species are known. Their English book-name is Sagittated Calamary. They can leap out of the water so high as often to fall on the decks of vessels. This is why they are called flying-squids, or sometimes sea-arrows. They are gregarious, inhabit the open sea, leaving their eggs floating in long clusters on the surface, are used as bait in the Newfoundland cod fishery, and are the principal food of the dolphins and cachalots, as well as of the albatross and the larger petrels. (*S. P. Woodward.*) [OMMASTREPHES.]

flying-squirrel, *s*
Zool.: A name given to such of the Sciuridæ (Squirrels) as have the skin of the sides very much extended between the fore and hind legs, so as, to a certain extent, to sustain the animal in the air when taking long leaps. *Sciuopterus volans* is the only European species.

* **flying-worm,** *s.* The tetter, the ring-worm. (*Ash.*)

flȳsçh, *s.* [A Swiss provincial word.]
Geol.: A series of rocks in the Central Alps. They are composed of fucoidal grit and shale overlying the nummulitic rocks. They are believed to be Upper Eocene. Some have been changed into saccharoid marble, quartz rock, and mica-schist.

* **flyte,** *v.i.* [FLITE.]

flȳ'-trăp, *s.* [Eng. *fly*, and *trap*.]
Bot.: *Apocynum androsæmifolium.*
¶ *Venus's fly-trap:*
Bot.: *Dionæa muscipula.* [DIONÆA.]

flȳ'-wŏrt, *s.* [Eng. *fly*, and *wort* (q.v.).]
Bot.: A name applied to the genus Myanthus, now merged in Catasetum.

* **fnast,** *s.* [A.S. *fnæst.*] Breath, breathing.
"Hire horte was so gret
That wel negh hire *fnast* atschet."
Owl & Nightingale, 43.

* **fnast,** * **fnaste,** *v.i.* [A.S. *fnæstian.*]
1. To breathe.
"He ne mouthe speke ne *fnaste*." *Havelok*, 548.
2. To break or burst out.
"Fyre out *fnast* with a fuerse lowe."
Destruction of Troy, 876.

* **fnes-ynge,** *s.* [A.S. *fnéosung.*] A sneezing.
"His *fnesynge* is as schynynge of fier."—*Wycliffe: Job* xli. 9. (*Pureey.*)

* **fō** (1), *s.* [FOE.]

Fō (2), *s.* [Chinese. See def.]
Religions: The spelling of the word Booddh intended to indicate the pronunciation of the name of that god in China, where his adherents are numbered by hundreds of millions. It is the nearest approach which the Chinese are capable of making to the correct pronunciation, but a Hindoo would regard it as far from accurate.

fōal, * **foale,** * **fole,** *s.* [A.S. *fola*=a foal, a colt; Icel. *foli*; Sw. *föle, fol*; Dan. *föl*; Dut. *veulen*; Ger. *fohlen, fullen*; Goth. *fula*, cogn. with Gr. πῶλος (*pōlos*) = a foal; Lat. *pullus* = a young animal. Skeat considers the root to be *pu* = to beget, which appears in Sans. *putra* = a son, and *pota* = the young of an animal.] [FILLY.] The young of the horse, including either sex; a colt, a filly.

foal-teeth, *s. pl.* The first teeth of horses: they are shed at a certain age.

fōal, *v.t. & i.* [FOAL, *s.*]
A. *Trans.:* To bring forth young; said of a mare or she-ass.
"Give my horse to Timon,
Ask nothing, give it him; it *foals* me straight
And able horses."

fō'-cal, *a.* [Fr. *focal*, from Lat. *focus* (q.v.).]

1. *Lit.* (*Math.* & *Physics*): Of or belonging to a focus.

2. *Fig.*: Constituting the point or place whence any influence emanates; a centre-point.

"In 1691, Titus, in order to be near the *focal* point of political intrigue and faction, had taken a house within the precinct of Whitehall."—*Macaulay: Hist. Eng.*, ch. xviii.

focal-distance, *s.*

1. *Optics*: The distance between a concave mirror and the focus or point at which its rays are most concentrated.

2. *Conic Sections*:

(1) *Of the parabola*: The distance between the focus and the vertex.

(2) *Of the ellipse and the hyperbola*: The distance between the foci and the centre.

¶ *Principal focal distance*:

Optics: The distance between the principal focus and a concave mirror.

***fō'-cal-īze,** *v.t.* [Eng. *focal*; *-ize*.] To bring to a focus; to focus.

"Light is *focalized* in the eye, sound in the ear."—*De Quincey.* (*Webster.*)

***fō'-çile, *fō'-çil,** *s.* [Fr. *focile*.]

Anat.: A bone of the forearm and leg; the greater focile being the ulna or tibia, the lesser the radius or fibula.

"The fracture was of both the *focils* of the left leg."—*Wiseman: Surgery*, bk. vii., ch. i.

***fō'-çĭl-lāte,** *v.t.* [Lat. *focillatus*, pa. par. of *focillatus*, pa. par. of *focillo* = to revive a benumbed person by means of fire or heat; *focus* = fire, a hearth.] To cherish, to warm.

***fō-çĭl-lā'-tion,** *s.* [FOCILLATE.] Cherishing, comfort, support.

fō-çĭm'-ĕ-tĕr, *s.* [Eng. *focus*, and Gr. μέτρον (*metron*) = a measure.]

Phot.: An instrument for assisting in focusing an object in or before a camera. This consists usually of a lens of small magnifying power.

fō'-cŭs, *s.* [Lat. = a fireplace, a hearth, a fire-pan, a brazier.]

I. *Ord. Lang.*: Any place from which an influence emanates, or where that influence exists in very concentrated form. (*Lit.* & *fig.*)

"Whitehall, when he dwelt there, was the *focus* of political intrigue and of fashionable gaiety."—*Macaulay: Hist. Eng.*, ch. iii.

II. *Technically*:

1. *Optics*: A point at which the rays of light refracted from a convex lens, or reflected from a concave mirror, are most concentrated; a point in which such rays meet, or tend to meet, if produced either backwards or forwards.

2. *Conic sections*:

(1) *Sing.* (*Of a parabola*): A point so situated that if from it there be drawn a line to any point in the curve, and another from the latter perpendicular to a straight line given in position, these two straight lines will always be equal to one another.

(2) *Plural*:

(*a*) *Of an ellipse*: Two points so situated that if two straight lines be drawn from them to any point in the curve, the sum of these straight lines will always be the same.

(*b*) *Of an hyperbola*: Two points so situated that if two straight lines be drawn from them to any point in the curve, the excess of the straight line drawn to one of the points above the other will always be the same.

3. *Astron.*: The term foci is often used in connection with the orbit of the earth, which is an ellipse, with the sun in one of the foci.

4. *Acoustics*: The point of convergence of sound rays, these following the same laws as those of light and heat. [¶ (1).]

¶ (1) *Acoustic focus*:

Acoustics: The focus of sound rays. [II. 4.]

(2) *Calorific focus*:

Heat: The focus of heat rays.

(3) *Conjugate foci*:

Optics: Two foci so situated that, if rays of light diverging from one strike a concave mirror, they will be reflected and meet in the other.

(4) *Luminous focus*:

Optics: The focus of light rays.

(5) *Principal focus*:

Optics: The focus of parallel rays striking a concave mirror.

(6) *Vertical focus*:

Optics: A radiant point behind a mirror, from which rays may be held to diverge more and more, and in which, looking at them now as coming from the opposite direction, and consequently as convergent, they would tend to meet.

fō'-cŭs, *v.t.* [FOCUS, *s.*] To bring to a focus: to focalize.

fō'-cŭs-ĭng, *pr. par.* or *a.* [FOCUS, *v.*]

focusing-glass, *s.*

Phot.: A glass used for magnifying the image on the ground glass in the camera, to enable the operator to get it into better focus.

fŏd'-dĕr (1), *** fod-dur, * fo-dre, * fod-dre, * fod-yr,** *s.* [A.S. *fódor*, *fóddor*, *fóddur*, from *fóda* = food; cogn. with O. H. fŏg (1), *s.* [Dan. (*snee*)*fog* = a snowstorm, from *fyge* = to drift; Icel. *fok* = spray; *fjúk* = a snowstorm.]

1. *Lit.*: A very thick mist; small hollow vesicles of water suspended in the air, but so low as to be but a short distance from the earth in place of rising high above it and becoming so illuminated by the sun as to constitute clouds of varied hue. Fogs often arise when the air above warm, moist soil is colder than the soil itself. The hot vapours from the ground are then condensed by coming in contact with the colder air above, as the warm steam of a kettle is by the comparatively cold air of a room. But no fog arises till the cold air has absorbed vapour enough to bring it to the point of saturation. Fogs often hang over rivers. Their cause is the condensation, by contact with the cold water, of the vapour in a hot and moist air current passing over the river. The "pea-soup" fogs of London life are produced by the carbon of the smoky atmosphere colouring the fog vesicles: a fog which is brown in London is generally white at Loughton, a few miles off, and wanting altogether at the top of High Beech hill. On hills and mountains of any size it is easy to rise above a fog, and see it like an ocean beneath one's feet.

"Infect her beauty,
You fensucked *fogs* drawn by the powerful sun,
To fall and blast her pride."—*Shakesp.: Lear*, ii. 4.

2. *Fig.*: A state of confusion, doubt, or perplexity.

fog-alarm, *s.*

Naut.: An audible signal, warning vessels from shoals or other dangerous places. Fog-alarms are various in their kind, their operation, and their construction. As to kind, they consist of bells, whistles, and trumpets. As to operation, they are sounded by the current, by the ebbing and flowing tide, by the sway-

ing of the waves, by the wind, by bellows, by clock-work impelled by weight or spring. As to construction, they are adapted for headlands, light-ships, buoys, or to be anchored by piles on spits, sand-bars, or shoals.

fog-bell, *s.*

Naut.: A bell upon a vessel, buoy, or spit of land, and rung by the motion of the waves, or force of the wind, as a warning to mariners.

fog-horn, *s.*

Nautical:

1. A kind of horn kept on board ships to be sounded as a warning in foggy weather.

2. An instrument resembling a trumpet in shape, through which air or steam is made to pass at a high pressure, causing a blast which can be heard to a considerable distance out at sea, thus in foggy weather warning sailors of their proximity to land.

fog-ring, *s.*

Meteorol.: A bank of fog occurring in a ring or circular form. It is not unfrequently observed off the coasts of Newfoundland.

fog-signal, *s.*

1. *Nautical:*

(1) A signal made on board ships in foggy weather by the sounding of a whistle, ringing of a bell, &c., in order to prevent collisions.

(2) A fog-alarm (q.v.).

2. *Rail.:* A detonating ball, placed on the rails to indicate danger to the driver of a passing train.

fog-smoke, *s.* Fog-mist.

"Rises the *fog-smoke* white as snow."
Scott: Marmion, ii. (Introd.)

fog-trumpet, *s.* A horn or trumpet placed on a projecting headland, a vessel, or a spar, and blown by mechanical means or by the wind, as a warning to mariners. A fog-horn (q.v.).

fog-whistle, *s.*

Naut.: A signal of warning for vessels off a coast. A sounder on the principle of the steam-whistle is exposed to a blast of air or of steam. Usually, motion derived from the waves, the tide, the wind, or clock-work, makes it automatic.

fŏg (2), *s.* & *a.* [Etym. doubtful; cf. Wel. *ffwg* = dry grass.]

A. *As substantive:*

1. Coarse, rank grass which has not been eaten off in the summer.

* **Folke-stone,** *s.* [FOLKSTONE.]

* **folk'-lănd (folk** as **fōk),** *s.* [A.S. *folcland.*]

Feudal law: The land of the folk or people, as distinguished from book-land, or land held by charter or deed. It was held by no assurance in writing, but distributed among the common folk at the pleasure of the lord, and resumed at his discretion. It could not be devised by will.

"Now, with regard to the *folkland,* this was a species of tenure neither strictly feudal, Norman, nor Saxon;

but mixed and compounded of them all; and which also, on account of the heriots that usually attend it, may seem to have something Danish in its composition. Under the Saxon government there were a sort of people in a condition of downright servitude, belonging to the lord of the soil, like the rest of the cattle or stock upon it. These seem to have been those who held what was called the *folkland*, from which they were removable at the lord's pleasure."—*Blackstone: Comment.*, bk. ii., ch. 4.

folk'-lōre (folk as **fōk),** *s.* [Eng. *folk*, and *lore*.] Popular superstitions, tales, traditions, or legends. Of late years the importance of the study of folklore has met with increasing recognition from students of anthropology and of comparative religion. It is worthy of note that many myths are found in a somewhat similar form among peoples widely divergent in race and locality. By some writers this fact is claimed in support of the Mosaic cosmogony; while others see in it a strong proof in favour of the theory of Evolution, and a means of tracing the steps by which man has advanced to his present position. The term *Folklore* was first introduced by Mr. W. J. Thom in A.D. 1846.

"Modern *folklore* holds either that a knocking or rumbling on the floor is an omen of a death about to happen; that dying persons themselves announce their dissolution to their friends in such strange sounds."—*Tylor: Primitive Culture* (1873), i. 145.

folk'-lōr-ĭst (folk as **fōk),** *s.* [Eng. *folklor(e); -ist.*] One skilled in or devoted to the study of Folklore (q.v.).

"There can be no doubt of the value of such a collection to *folklorists* and anthropologists."—*Athenæum*, May 12, 1883, p. 603.

* **folk'-mōte,** * **folk'-moōt (folk** as **fōk),** *s.* [Eng. *folk; -mote;* A.S. *folc-gemót.*]

1. An assembly of the people to consider matters affecting the commonwealth; answering in some measure to a parliament.

"It is not a *folkmote*, although it represents the people."—*Stubbs: Select Charters*, p. 4.

2. A court-leet or local court.

"These held a court every fortnight, which they called the *folkmote*, or leet, and there became reciprocally bound for each other, and to the publick for their own peaceable behaviour, and that of their families and dependants."—*Burke: An Abridgment of English History*, bk. ii., ch. vii.

* **folk'-mōt-ẽr,** * **folk'-moōt-ẽr (folk** as **fōk),** *s.* [Eng. *folkmot(e); -er.*] One who frequents or attends a folkmoot; a democrat.

"Keep your problems of ten groats, these matters are not for pragmatics and *folkmooters* to babble in."—*Milton: Colasterion.*

folk'-rēde (folk as **fōk),** *s.* [Eng. *folk*, and Mid. Eng. *rede* = knowledge, advice.] For def. see extract.

"If any distinction is to be drawn between them, we might say that the tales which have been imbedded in the literature, written or unwritten, of the several nations form the folklore, while those which are preserved only in the common speech of everyday life belong to the *folkrede*, or popular talk."—*Cox: Introd. to Folklore*, p. 7.

folk-right (as **fōk'-rīt),** *s.* [Eng. *folk*, and *right.*] The rights to which every citizen of an organized society has a claim as distinguished from those of the sovereign; common justice.

"The preamble of his [Edgar's] secular laws declares that every man shall be worthy of *folkright*, poor as well as rich."—*Stubbs: Constitutional History*, i. 208.

"Then shall we know, if we *follow* on to know the Lord."—*Hosea* vi. 3.

7. To result; to arise as an effect or consequence.

"What *follows*, if we disallow of this?"
Shakesp.: King John, i.

8. To come close after, as a result; to attend.

"Arts still *followed* where her eagles flew."
Pope: Essay on Criticism, 684.

9. To result, as an inference.

"It *follows* not that she will love Sir Thurio."
Shakesp.: Two Gentlemen of Verona, iii. 2.

10. To be the next thing to be done or said.

"This *follows*: make for Sicilia."
Shakesp.: Winter's Tale, iv. 4.

¶ (1) *To follow on:*

Cricket: When the side which goes in second in a game of cricket fail to make within a certain number of the runs made by their opponents in the first innings, they have to go in a second time at once; this is called *following on*. The word is also used substantively.

"The professional made four fours in quick succession, and the *follow on* was soon saved."—*Standard*, Sept. 3, 1882.

(2) *To follow suit:*

Cards: To play a card of the same suit as that first played; hence, generally, to follow the same line or course of action as that taken by a predecessor.

¶ (1) Crabb thus discriminates between to *follow*, to *succeed*, and to *ensue*: "*Follow* and *succeed* are said of persons and things; *ensue* of things only: *follow* denotes the going in order, in a trace or line; *succeed* denotes the going or being in the same place immediately after another: many persons may *follow* each other at the same time; but only one individual properly succeeds another. To *follow* in relation to things is said either simply of the order in which they go, or of such as go by a connexion between them; to *succeed* implies simply to take the place after another; to *ensue* is to *follow* by a necessary connexion."

(2) He thus discriminates between to *follow* and to *pursue*: "The idea of going after anything in order to reach or obtain it is common in these terms, but under different circumstances: one *follows* a person mostly with a friendly intention; one *pursues* with a hostile intention. In application to things, *follow* is taken more in the passive, and *pursue* more in the active sense: a man *follows* the plan of

another, and *pursues* his own plan; he *follows* his inclinations, and *pursues* an object."

(3) He thus discriminates between to *follow* and to *imitate*: "Both these terms denote the regulating of our actions by something that offers itself to us, or is set before us; but we *follow* that which is either internal or external: we *imitate* that only which is external. To *follow* and to *imitate* may both be applied to that which is good or bad: the former to all the actions, but the latter only to the behaviour or the external manners." (*Crabb: Eng. Synon.*)

follow-board, *s.*

Found.: A board beneath the pattern, and on which it lies while the loam is being rammed.

fŏl'-lō-ĕr, *fol-ew-er, *fol-ware, *fol-wer, *s.* [Eng. *follow; -er.*]

I. *Ordinary Language:*

1. One who comes or goes after another in the same direction.

2. One who pursues after another.

3. One who follows another as his leader or guide.

"Be ye *followers* of God, as dear children."—*Ephesians* v. 1.

4. One who seeks after or tries to attain anything.

"If ye be *followers* of that which is good."—1 *Peter* iii. 13.

5. One who follows another as an attendant or dependant.

"No Indian prince has to his palace
More *followers* than a thief to the gallows."
Butler: Hudibras, pt. ii., c. 1.

6. An associate, a companion.

"How accompanied, can'st thou tell that?
With Poins, and other his continual *followers*."
Shakesp.: 2 Henry IV., iv. 4.

7. One under the command of another.

"Little gallant, you were wont to be a *follower*, but now you are a leader."—*Shakesp.: Merry Wives*, iii. 2.

8. A servant, a retainer.

"What, fifty of my *followers* at a clap!"
Shakesp.: Lear, i. 4

9. One of the same party or faction.

10. A male sweetheart, a beau. (*Colloquial.*)

II. *Technically:*

1. *Law-stat.:* A sheet of parchment added on to the first sheet of an indenture or other deed.

2. *Mach.:* A portion of a machine, usually sliding in guides, and moved by another portion; as the reciprocating punch-stock in a fly-press, which is moved by the screw to which it is swivelled. It is analogous to the platen of many presses.

3. *Steam-engin.:* The cover or plug of a stuffing-box, which rests upon and compresses the packing; a gland.

4. *Scots Law:* One who pursues or sues another at law.

"Gif he be absent & contumace at the secunde summondis, he salbe condampnit be the Juge in the expensis of the *folowar*, & in xl s. for the kingis vnlaw."—*Parl. Jas. II.* (1449), *Acts* (ed. 1815), p. 37.

¶ Crabb thus discriminates between *follower, adherent,* and *partisan*: "A *follower* is one who follows a person generally; an *adherent* is one who adheres to his cause; a *partisan* is the follower of a party: the *follower* follows either the person, interests, or the principles of any one; thus the retinue of a nobleman, or the friends of a statesman, or the friends of any man's opinions, may be styled his *followers*; but the *adherent* is that kind of *follower* who espouses the interests of another: a *follower* follows near or at a distance; but the *adherent* is always near at hand; the *partisan* hangs on or keeps at a certain distance." (*Crabb: Eng. Synon.*)

follower-wheel, *s.*

Mach.: The wheel, in geared machinery, which is driven, as distinguished from the driver, or the wheel which impels.

fŏl'-lō-ĭng, *pr. par., a., & s.* [Follow.]

A. *As pr. par.:* (See the verb).

B. *As adj.:* Coming after or next; succeeding; next after, next described: as, The story is related in the *following* pages, or in the *following* manner.

C. *As substantive:*

1. The act or state of coming or going after or succeeding.

2. A body or party of adherents or followers; a sect or party under one leader or guide.

"A man with a great name in the country and a strong *following* in Parliament."—*Macaulay: Hist. Eng.*, ch. xxiii.

*3. The vocation, business, or profession which one follows.

fŏl'-lȳ, *fol-i, *fol-ie, *fol-y, *fol-ye, *s.* [O. Fr. *folie*, from *fol* = a fool; Port. *folia*; Ital. *follia.*]

1. Weakness of intellect; want of understanding; foolishness; imbecility.

"Despised by thee, what more can he expect
From youthful *folly* than the same neglect?"
Cowper: Tirocinium, 713.

2. An act of foolishness or thoughtlessness; weak, thoughtless, or unbecoming conduct.

"I was young, a single man,
And after youthful *follies* ran."
Wordsworth: Last of the Flock.

3. An act of criminal weakness; depravity; wickedness.

"Achan wrought *folly* in Israel."—*Joshua* vii. 15.

4. A term frequently applied to a building or work begun by its projector on a scale too large for his resources, and consequently abandoned before completed.

¶ Crabb thus discriminates between *folly* and *foolery*: "*Folly* is the abstract of foolish, and characterizes the thing; *foolery* the abstract of fool, and characterizes the person; we may commit an act of folly without being chargeable with weakness or *folly*; but none are guilty of *fooleries* who are not themselves fools, either habitually or temporarily." (*Crabb: Eng. Synon.*)

***folly-fallen,** *a.* Grown foolish.

***fŏl'-lȳ-ĭng,** *s.* [As if a pr. par. form of a v.i. *to folly* = to play the fool.] An act of folly, a piece of foolery; the act of playing the fool.

Fomented by his virtual power, and warmed."
Milton: P. L., xi. 338.

II. *Fig.:* To encourage, to abet, to instigate, to promote.

"Persecution may be carried on by the people, but it is raised and *fomented* by kings and rulers."—*Bishop Horne: On the Psalms*, pt. ii.

fō-mĕn-tā'-tion, *s.* [Fr. *fomentation*; Prov. *fomentacio*; Sp. *fomentacion*; Port. *fomentação*, all from Lat. *fomentatio* (genit. *fomentationis*).] [Foment.]

I. *Literally:*

1. The application of a liquid, such as water, generally warm, to a portion of the body to remove external or internal disease. The application is usually made by means of flannel steeped in the liquid. If the water be charged with mucilaginous principles, such as mallows can supply, it is called emollient; if with a narcotic one like poppy-heads, it is said to be sedative or anodyne.

2. That which is thus applied.

"*Fomentation* calleth forth the humour by vapours; but yet, in regard of the way made by the poultis, draweth gently the humours out; for it is a gentle *fomentation*, and hath withal a mixture of some stupefaction."—*Bacon: Natural History.*

II. *Figuratively:*

1. The act of treating with kindness or indulgence; caressing; a caress.

"No midnight mask, no flattering, amorous *fondling*."
Mickle: Siege of Marseilles, ii. 4.

*2. A fool; inasmuch as those who are much indulged in early youth, are generally made no less foolish by the injudicious tenderness shown them.

"An epicure had some reason to allege, an extortioner is a man of wisdom, and acteth prudently in comparison to him; but the *fondling* [the profane swearer] offendeth heaven and abandoneth happiness, he knoweth not why or for what."—*Barrow: Sermons,* ser. 15.

*3. One unduly under the influence of affection, and who therefore acts foolishly.

"We have many such *fondlings* that are their wives' pack-horses and slaves."—*Burton: Anatomy of Melancholy,* pt. iii., § 3.

*4. A person or thing fondled or caressed; a pet.

"Any body would have guessed miss to have been bred up under a cruel stepdame, and John to be the *fondling* of a tender mother."—*Arbuthnot: John Bull.*

fŏnt (1), *s.* [Lat. *fons* (genit. *fontis*); A.S. *font, font;* O. Fris. *font, funt;* Dut. *vont, vonte;* O. Fr. *font, funt;* Port. & Ital. *fonte;* Icel. *fontr, funtr;* Dan. *font;* Sw. *funt.*]

*1. A fountain, a spring.

"From her native *font*, as proudly she doth flow."
Drayton: Poly-Olbion, s. 10.

2. The vessel which contains the water for the purposes of baptism. The font is the only relic of our ancient architecture which in its form is at all analogous to the Grecian and Roman vases. The shape which has at different periods been given to it is a subject of some interest. Norman fonts are generally square or circular; the first frequently placed on five legs; but which may be the older form, the square or circle, is not yet known. The circular form continued to be much used during the Early English period; so, occasionally, was the square. Throughout the continuance of the Decorated style, the octagon was generally employed, sometimes the hexagon. During the Perpendicular style, the octagon was almost always used. Until the Reformation, and occasionally after, dipping was practised in this country. Pouring

or sprinkling was not unusual previous to the Reformation; for as early as the year 754, pouring, in cases of necessity, was declared by Pope Stephen III. to be lawful; and in the year 1311, the Council of Ravenna declared dipping or sprinkling indifferent: yet dipping appears to have been in this country the more usual mode. Fonts were required to be covered and locked: originally their covers were simple flat movable lids, but they were subsequently very highly ornamented, assuming the form of spires, and enriched with various decorations in carved wood, taking the form of pinnacles, buttresses, &c.

"Entwine the cold baptismal *font*."
Tennyson: In Memoriam, xxix. 10.

***font-name,** *a.* A baptismal or Christian name.

"Boston is no *font-name*."—*Fuller: Worthies; Lincoln,* ii. 20.

***font-stone, *fan-stone, *fon-stone, *fount-ston, *funt-stone,** *s.* A font.

"Thai had tane haly baptem at the *fonstone*."
Hampole: Pricke of Conscience, 3,309.

***font-vat, *funt-fat,** *s.* A font.

"Naked he falleth in the *funtfat*." *Bestiary,* 108.

fŏnt, (2), **fŏunt,** *s.* [Fr. *fonte*, from *fondre* = to cast, from Lat. *fundo* = to pour out.]

Printing: An assortment of type of one size, of a given weight, containing large and small capitals, small letters, points, accents, figures, spaces, quads, &c. The weights of fonts vary according to business requirements.

"Agreeable hereunto it is that artificial issues made in any part of the body are by physicians called *fontinels*, or little fountains."—*Hammond: Annotations on St. Mark* v. 29.

fontange (pron. **fŏn-tanzh'**), *s.* [Named after Mlle. (afterwards Duchesse) de *Fontange*, mistress of Louis XIV., the introducer of the fashion.] For def. see extract.

FONTANGE.
From a French Print of the Period.

"The commode called by the French *fontange*, worn on their heads by ladies at the beginning of the eighteenth century was a structure of wire, which bore up the hair and the forepart of the lace cap to a great height."—*Spectator,* No. 98. (Note by Prof. H. Morley.)

Fŏn-tĕ-vraud', Fŏn-tĕ-vrault' (aud, ault, as **ō),** *s.* [Fr., from Lat. *fontis Ebraldi*, so named from the place where the first monastery of the sect was erected on the confines of Angers and Tours.]

Ch. Hist.: A branch of the Benedictine order of monks which was instituted in the twelfth century by Robert of Abrissel, who brought monks and nuns under one roof, and placed them under the government of a female, because Jesus placed John in subjection to the Virgin Mary, saying "Woman, behold thy son" (John xix. 26). The founder of the monastery was suspected of immorality, a charge which his followers strenuously denied. In 1106 the order received the sanction of Pope Pascal II.; in 1113 it was exempted from episcopal jurisdiction. In 1177 some monks connected with it came over to England by invitation of Henry II. It was remodelled in 1507 by the Abbess Renée of Bourbon.

fŏnt-ĭc'-ŭ-lŭs, *s.* [Lat., = a little fountain, dimin. of *fons* = a fountain.]

Surg.: A small ulcer produced, either by aid of caustics or by incisions, the discharge from which is kept up with a view to fulfil certain therapeutical indications. [ISSUE.]

fŏnt-ĭ-nā'-lĕ-ī, *s.* [Lat. *fontinal(is)* (q.v.), and masc. pl. suff. *-ei.*]

Bot.: A genus of Bryaceæ (True Mosses); type Fontinalis (q.v.).

fŏnt-ĭn-ā'-lĭs, *s.* [Lat. = of or from an opening or fountain; *fons* (genit. *fontis*) = a spring or fountain.]

Bot.: A genus of mosses; the typical one of the section Fontinalei. The leaves are compressed, so as to make the stem look triquetrous. *Fontinalis antipyretica* is common in running streams. Its specific name is derived from the fact that, as it does not easily ignite, the Laplanders stuff the space between their chimneys and their walls with it as a precaution against fire.

foôd (1), ***fode, *foode, *fude,** *s.* [A.S. *fôda:* cogn. with Icel. *fœdhi, fœdha;* Dut. *fôde;* Sw. *fôdd.*]

I. *Ordinary Language:*

1. *Lit.:* In the same sense as II. 1.

"And wine and *food* were brought."
Tennyson: Enid & Geraint, 1,138.

2. *Figuratively:*

(1) Anything which nourishes, sustains, supports, or augments.

"Give us some music: music, moody *food*
Of us that trade in love."
Shakesp.: Antony & Cleopatra, ii. 5.

*(2) That which is fed, nourished, or brought up; a child.

"Wher that he sat or stode
She biheld opon that freely *fode*."
Amis & Amiloun, 715.

II. *Technically:*

1. *Phys.:* Any substance which, taken into the body, is capable of sustaining or nourishing, or which assists in sustaining or nourishing the living being. Foods may be classed under three heads, gaseous, liquid, and solid, the first two consisting of the air we breathe —the oxygen of which is so essential to life—and the water we drink. Milk, tea, coffee, cocoa, &c., are popularly called liquid foods, but each of these is simply water in which various solid substances are dissolved, or held in suspension. The solid foods are of three kinds—viz., nitrogenous, non-nitrogenous, and mineral. Nitrogen compounds, or flesh-formers, are essentially composed of carbon, hydrogen, oxygen, and nitrogen. They possess the only ingredients capable of building up and repairing the nitrogenous tissues of the body. They also furnish a limited supply of heat, especially when heat-giving compounds are deficient in the body. Nitrogenous compounds are found both in the animal and vegetable kingdoms under the forms of albumen, fibrin, casein, gelatine, and chondrin. Non-nitrogenous compounds, or heat-givers, sometimes called carbonaceous compounds, are composed of carbon, hydrogen, and oxygen. They serve to keep up the heat of the body, and so produce energy or force. The chief heat-givers are starch, so abundant in the cereal grains, sugar, and fat. None of these substances will of itself sustain life. The mineral foods are the salts of soda and potash, the phosphates of lime and magnesia, iron, &c. Common salt is the only mineral substance purposely added to food, the other mineral substances being found in nearly all parts of plants and animals used as food. As the daily waste of the body must be met by a daily supply of nourishment, it becomes of the utmost importance that such supply should consist of both flesh-formers and heat-givers, and in the proportion of two parts of the former to six of the latter. Milk is a model food, as it furnishes all the nourishment required, and in due proportion. Scotch oatmeal may also be called a model food, as it contains one part of flesh-formers and 5½ parts of heat-givers. In fine wheaten flour the proportion is as one to eight, a part of the flesh-forming body having been removed in its preparation. The adulteration of any article of food reduces one or both of its essential constituents, hence such practices should be strongly condemned, and the adulterator severely punished.

2. *Zool.:* The food of animals is not directly derived from inorganic nature, but mediately through the agency of plants.

3. *Bot.:* Plants can feed upon and assimilate inorganic matter, in this respect differing from animals. A few plants, however, such as fungi, the Sun-dew (Drosera), and Venus's Fly-trap require animal food. The ordinary food of plants consists of carbon, water, and nitrogen.

¶ Crabb thus discriminates between *food*, *diet*, and *regimen:* "All these terms refer to our living, or that by which we live: *food* is here the general term; the others are specific. *Food* specifies no circumstance; whatever is taken to maintain life is *food; diet* is properly prescribed or regular *food*. *Food* is a term applicable to all living creatures; *diet* is employed only with regard to human beings who make choice of their *food*. *Diet* and *regimen* are both particular modes of living; but the former respects the quality of *food;* the latter the quantity as well as quality: *diet* is confined to modes of taking nourishment; *regimen* often respects the abstinence from *food*, bodily exercise, and whatever may conduce to health." (*Crabb: Eng. Synon.*)

food-vacuoles, *s. pl.*

Zool.: Clear spaces in the sarcode of an Amœbea. (*Nicholson.*)

* **foôd, * foden,** *v.t.* [Food, *s.*] To feed.

> "The cherl . . . to the barn talked,
> And *foded* it with floures and with faire byhest."
> *William of Palerne*, 57.

* **food** (2), *s.* [Feud.]

* **foôd′-fûl,** *a.* [Eng. *food; -ful(l).*]

1. Furnishing food; fruitful.

> "Where hardly given the hopeless waste to cheer,
> Denied the bread of life, the *foodful* ear."
> *Wordsworth: Descriptive Sketches.*

2. Fruitful, fertile.

> "The democratic commonwealth is the *foodful* nurse of ambition."—*Burke: Appeal from New to Old Whigs.*

* **foôd′-lĕss,** *a.* [Eng. *food; -less.*] Destitute of or without food; not furnishing food; barren.

> "The *foodless* wilds
> Pour forth their brown inhabitants."
> *Thomson: Winter*, 256.

foôd′-stŭff, *s.* [Eng. *food*, and *stuff.*] Articles of commerce intended for food.

* **fôod′-ȳ, * food-ie,** *a.* [Eng. *food; -y.*]

1. Of the nature of or fit for food; eatable; nourishing.

> "Wine she drew,
> And into well-sewed sacks poured *foodie* meale."
> *Chapman: Homer; Odyssey* ii.

2. Fruitful; furnishing food; fertile.

> "And all obseru'd for preseruation
> Through all their *foodie*, and delicious fen."
> *Chapman: Homer; A Hymne to Hermes.*

foôl (1) * **fol, * fole, * foole, * fule,** *a. & s.* [O. Fr. *fol* (Fr. *fou*), from Lat. *follis* = a pair of bellows, a windbag; pl. *folles* = puffed cheeks; hence transferred to a buffoon; Ital. *folle.*]

* **A.** *As adjective:*

1. Foolish, silly, stupid; wanting in intellect or sense.

> "His moder was Sibriht sister, that was a *fole* kyng."
> *Robert de Brunne*, p. 14.

2. Wicked, depraved.

> "Bituene a king and a *fol* womman in spousbreche ibore."
> *Pilate*, 2.

B. *As substantive:*

I. *Ordinary Language:*

1. One who is destitute of reason or understanding; an idiot; a natural.

> "'Tis time to leave this fooling now
> Which none but *fools* call wit."
> *Browne: Songs; Palinode.*

2. One who is deficient in reasoning power; one who acts or behaves stupidly, or irrationally, or absurdly.

> "Some take him for a tool
> Which knaves do work with called a *fool*."
> *Butler: Hudibras*, pt. i., c. i.

3. One who counterfeits folly; a buffoon, a jester; a retainer kept formerly by persons of rank, to make sport for his master and his guests. These fools were dressed in motley, wore a pointed cap and bells, and carried a mock sceptre or bauble in the hand.

> "Where's my knave, my *fool!* Go you, and call my *fool* hither."—*Shakesp.: Lear*, i. 4.

* 4. A depraved person.

> "He was a *fole* of lif, and vsed lichorie."
> *Robert de Brunne*, p. 210.

II. *Scrip.:* In some passages *fool* is used in its ordinary English sense—viz., B. I. 2 (Prov. xii. 16, xvii. 28, xx. 3, xxix. 11; Eccl. v. 3; 1 Cor. xv. 36). In many others a fool is synonymous with a wicked man (2 Sam. xiii. 13; Ps. cvii. 17; Prov. xxxiii. 19, xxvi. 10; Matt. v. 22). According to Scripture teaching, it is not deficiency of intellect which makes a man a fool, but misuse of that which is possessed, and as responsibility is proportionate to the talents received, the higher the intellect of the man who misuses his endowments, the more he deserves the name of fool.

¶ (1) *To play the fool:*

(*a*) To act like a fool or one destitute of reason.

> "If apostolic gravity be free
> *To play the fool* on Sundays, why not we?"
> *Cowper: Progress of Error*, 147.

(*b*) To act the part of a jester or buffoon.

> "I returning where I left his armour, found another instead thereof, and armed myself therein to *play the fool*."—*Sidney: Arcadia.*

* (2) *To put the fool on* or *upon a person:* To treat or account as a fool; to charge with folly.

> "To be thought knowing, you must first *put the fool upon* all mankind."—*Dryden: Juvenal.* (Pref.)

(3) *To make a fool of:* To cause to appear ridiculous; to deceive, to disappoint.

> "To challenge him to the field, and then to break promise with him, and *make a fool of* him."—*Shakesp.: Twelfth Night*, ii. 3.

(4) *Feast of fools:*

Eccles. & Ch. Hist.: A feast which was formerly held in some churches and monasteries in France on New Year's Day. Much licence of folly and even of indecency was tolerated, whence the name of the festival. It flourished from about the year 1198. In 1435 the Council of Basle censured it, and the Parliament of Dijon in 1532 suppressed it in that part of France. It reached England in 1240, and was abolished about A.D. 1400. It was probably a Christianised relic of the Roman Saturnalia.

(5) *Order of Fools:*

Hist.: A benevolent association founded by Adolphus, Count of Cleves, in 1381. It continued till the sixteenth century.

¶ Crabb thus discriminates between *fool*, *idiot*, and *buffoon:* "The *fool* is either naturally or artificially a *fool;* the *idiot* is a natural *fool;* the *buffoon* is an artificial *fool:* whoever violates common sense in his actions is a *fool;* whoever is unable to act according to common sense is an *idiot;* whoever intentionally violates common sense is a *buffoon*." (*Crabb: Eng. Synon.*)

* **fool-begged,** *a.* Foolishly or absurdly begged; idiotic, absurd.

> "If thou live to see like right bereft
> This *fool-begged* patience in thee will be left."
> *Shakesp.: Comedy of Errors*, ii. 1.

* **fool-bold,** *a.* Foolishly bold; rash; foolhardy.

> "Some in corners have been *fool-bold*."—*Leland.*

* **fool-born, * fool-borne,** *s.* Produced by a fool; tolerated by none but fools.

foôl, *v.i. & t.* [Fool, *s.*]

* **A.** *Intrans.:* To act or play the fool; to trifle, to play, to idle.

> "Old men *fool* and children calculate."
> *Shakesp.: Julius Cæsar*, i. 3.

B. *Transitive:*

1. To make a fool of; to treat as a fool; to disappoint, to deceive; to mock.

> "To *fool* the crowd with glorious lies."
> *Tennyson: In Memoriam*, cxxvii. 14.

* 2. To infatuate; to make foolish.

"If it be you that stir these daughters' hearts
Against their father, *fool* me not so much
To bear it tamely." *Shakesp.: Lear*, ii. 4.

3. To cheat, to defraud.

"Ah! let me not be *fooled*, sweet saints."
Tennyson: St. Simeon Stylites, 209.

¶ *To fool away:*

(1) To waste on objects of little or no value; to fritter away.

"It must be an industrious youth that provides against age; and he that *fools away* the one, must either beg or starve in the other."—*L'Estrange.*

*(2) To cause or induce to act foolishly; to lead astray.

foôl'-ĕr-ȳ, *s.* [Eng. *fool*; *-ery.*]

1. The actions, manners, or characteristics of a fool; habitual folly; the act of playing the fool; folly.

"They to the vulgar sort now pipe and sing,
And make them merrie with their *fooleries.*"
Spenser: Tears of the Muses.

2. An act of folly; an absurdity.

"All such *fooleries* are quite inconsistent with that manly simplicity of manners, which is so honourable to the rational character."—*Beattie: Moral Science*, pt. i., ch. ii., § 5.

3. An object of folly or weakness; an absurdity.

"That Pythagoras, Plato, or Orpheus believed in any of these *fooleries*, it cannot be suspected."—*Raleigh: History.*

"Open the door, secure, *foolhardy* king."
Shakesp.: Richard II., ii. 17.

¶ Crabb thus discriminates between *foolhardy*, *adventurous*, and *rash*: "The *foolhardy* expresses more than the *adventurous*; and the *adventurous* than the *rash*. The *foolhardy* man ventures in defiance of consequences: the *adventurous* man ventures from a love of the arduous and the bold; the *rash* man ventures for want of thought: courage and boldness become foolhardihood when they lead a person to run a fruitless risk; an *adventurous* spirit sometimes leads a man into unnecessary difficulties; but it is a necessary accompaniment of greatness. There is not so much design, but there is more violence and impetuosity in rashness than in foolhardihood: the former is the consequence of an ardent temper which will admit of correction by the influence of the judgment; but the latter comprehends the perversion of both the will and the judgment." (*Crabb: Eng. Synon.*)

* **foôl'-ĭ-fȳ,** *v.t.* [Eng. *fool*; *i* connective; suff. *-fy.*] To make a fool of, to fool.

"They being throughly taught how with excessive flatterie to bear him up, *foolified* and gulled the man."—*P. Holland: Ammianus Marcellinus*, p. 48.

II. *Technically:*

1. *Palæont.:* The footmarks or imprints left at inconceivably remote periods by the feet of various animals on the wet clay or sand of sea-beaches or similar localities, and which are now found at various levels in the solid strata of the earth. The footprints in the Silurian and other very antique rocks, are mostly those produced by the claws of crustaceans. In the Triassic rocks of Connecticut, in America, the footprints of thirty-two or more species of bipeds, and twelve of quadrupeds, have been found. In rocks of nearly the same age in Europe, footprints, so like those of the human hand that the animal making them was called at first Chirotherium (q.v.), was at last skilfully assigned by Prof. Owen to the genus of amphibians called by him, from its teeth, Labyrinthodon. It is in allusion to this phenomenon that Longfellow speaks of a hero leaving "footprints on the sands of time."

2. *Comp. Mythol.:* The first mention in history of gigantic footprints is by Herodotus (iv. 82), where he says he was shown a footprint of Hercules impressed on a rock, in the shape of a man's foot, but two cubits in length, and (ii. 91) he attributes sandals of the same size to Perseus. Traditions as to such footprints are found in all religions, the most common being that they were made when some god or hero ascended to heaven. Brahmans, Bûddhists, Moslems, and Oriental Christians agree in reverencing the cavity in the rock, five feet long by two and a-half feet wide, at the top of Adam's Peak, though their reasons for so doing are, of course, different. Like legends are also found in the islands of the Pacific, in North America, and in Mexico. The myth probably arose from rude peoples first investing chiefs or leaders of a bygone age with gigantic size; the next step was deification; then to imagine either fossil footmarks of some huge beast, or hollows naturally formed, or rudely sculptured rocks were the last impress of the foot of such hero as he ascended, was by no means difficult.

"The typical case is the sacred *footprint* of Ceylon." —*Tylor: Early Hist. Mankind*, ch. vi.

footprint-myth, *s.*

Comp. Mythol.: A myth by which any cavities in rocks are marked out as being the footprints of some god or hero.

for- (1), *pref.* [A.S. *for-*; Icel. *for-*; Dan. *for-*; Sw. *för-*; Dut. & Ger. *ver-*; Goth. *fra-*; Sanse. *para-*.]

For- as a prefix to verbs has three forces:

1. An intensive force; equivalent to utterly, extremely, completely, very greatly: as in *for*lorn = utterly lorn or lonely; *for*wearied = wearied out; *for*drunken = very drunk, &c.

2. A negative or privative force: as in *for*bid = to bid away from, to prohibit; *for*fend = to keep or fend off, to avert, &c.

3. The force of amiss or badly: as *for*shapen = badly shapen, misshapen.

for- (2), *pref.* [O. Fr. *for-*, from Lat. *foris* = outside.] A prefix with the force of outside, without: as in *for*eclose (properly *for*close) = to shut out, to exclude; *for*feit = done beyond or outside.

fŏr'-age (age as **ĭj), * for-rage,** *s.* [O. Fr. *fourage* (Fr. *forerrage*), from *forrer* = to forage, from *forre, fuerre* (Fr. *feurre*) = fodder, straw, from Low Lat. *fodium*; from O. Dan. *foder* = fodder (q.v.); Sp. *forrage*; Port. *forragem*; Ital. *foraggio*.]

1. Fodder, provisions; especially such as are obtained by pillage.

"Cæsar sent forth all his men of arms *for forrage*."—*Goldinge: Cæsar*, p. 118.

2. The act of seeking for or providing provisions; the act of foraging.

3. A pasture or feeding place.

"One way a band select from *forage* drives
A herd of beeves." *Milton: P. L.*, xi. 646.

"With greens and flowers recruit their empty hives,
And seek fresh *forage* to sustain their lives."
Dryden: Virgil; Georgic iv. 364, 365.

fŏr'-age (age as **ĭj), * for-rage, * four-rage,** *v.i.* & *t.* [Fr. *fourrager*; Ital. *foragiare*; Sp. *forragear*.] [FORAGE, *s.*]

A. *Intransitive:*

1. To wander in search of forage or provisions; to seek for forage.

"They would not permit the Romans, no, not so much as to go a *foraging* into their territorie."—*P. Holland: Livius*, p. 375.

2. To seek for food or provisions of any kind.

"One night, a *foraging* for prey,
He found a store-house in his way."
Falden: Fox & Weasel.

* 3. To prey; to ravage.

"His most mighty father on a hill
Stood smiling, to behold his lion's whelp
Foraging in blood of French nobility."
Shakesp.: Henry V., i. 2.

* 4. To reconnoitre; to act as a vidette.

"Ten thousand horse shall *forage* up and down,
That no relief or succour come by land."
Marlowe: 1 Tamburlaine, iii. 2.

B. *Transitive:*

fŏr-ạ-min'-ĭ-fĕr, *s.* [Lat. *foramen* (genit. *foraminis*) = an opening, and *fero* = to bear.]

Zool.: An individual belonging to the order Foraminifera (q.v.).

fŏr-ă-min-if'-ĕr-ạ, *s. pl.* [Lat. *foramen* (genit. *foraminis*) = a hole, an opening, an aperture, and *fero* = to bear. So named from their perforated shells. (See def.).]

1. *Zool.:* An order of animals belonging to the sub-kingdom Protozoa, and the class Rhizopoda (q.v.). The body is contained within a calcareous test or shell, which is polythalamous (many chambered). It may be cylindrical or spiral, or it may tend to the pyramidal form. The outer surface presents a punctate or dotted appearance, produced by the presence of very numerous foramina. [See def.] The chambers in some are perfectly distinct from others, though so aggregated as to form a compound shell; in others they are connected with a funnel-like tube. The inside of the shell has an extensile and contractile sarcode of a reddish or yellow colour, a thin film of which also invests its outside. Foraminifers are always of small size, and often indeed microscopic. With the exception of Gromia, which occurs both in fresh and salt water, they are exclusively marine. Sometimes their shells constitute sea-sand. In the Atlantic, at a depth of 3,000 fathoms, there is an ooze composed almost entirely of Globigerinæ, which belong to this order; the stratum thus formed is a direct continuation of the white chalk deposit, having gone on apparently through the whole Tertiary period. Drs. Carpenter and Parker, and Prof. T. Rupert Jones have divided the Foraminifera thus:—

Sub-order I.—Imperforata. Families: (1) Gromida, (2) Miliolida, (3) Lituolida.
Sub-order II.—Perforata. Families: (1) Lagenida, (2) Globigerinida, and (3) Nummulinida.

2. *Palæont.:* The exceedingly antique Eozoon of the Laurentian rocks, if organic, as it is generally believed to be, was apparently a Foraminifer. Forms more unequivocal, some of them very like recent species, occur in the Silurian, the Carboniferous, and other strata.

They occur through all the Secondary period, chalk being almost entirely composed of their cases. [1.] They increase in number and importance in the Tertiary. The Nummulites of the Middle Eocene are foraminiferous animals. The type of the order has remained wonderfully constant from the earliest times till now.

fŏr-ă-mĭn-ĭf′-ĕr-ạl, *a.* [Eng. &c. *foraminifer; -al.*] The same as FORAMINIFEROUS (q.v.).

fŏr-ă-mĭn-ĭf′-ĕr-ous, *a.* [Eng. &c. *foraminifer; -ous.*]

Shakesp.: Coriolanus, iii. 1.

¶ Crabb thus discriminates between to *forbid,* to *prohibit,* and to *interdict:* "*Forbid* is the ordinary term; *prohibit* is the judicial term; *interdict* the moral term. To *forbid* is a direct and personal act; to *prohibit* is an indirect action that operates by means of extended influence: both imply the exercise of power or authority of an individual; but the former is more applicable to the power of an individual, and the latter to the authority of government. *Interdict* is a species of *forbidding* applied to more serious concerns. A thing is *forbidden* by a word; it is *prohibited* by a law: hence that which is immoral is *forbidden* by the express word of God; that which is illegal is *prohibited* by the laws of man. . . . To *forbid* or *interdict* are opposed to command; to *prohibit,* to allow. *Forbid* and *interdict,* as personal acts, are properly applicable to persons only, but by an improper application are extended to things; *prohibit,* however, in the general sense of restraining, is applied with equal propriety to things as to persons; shame *forbids* us doing a thing; law, authority, and the like, *prohibit.*" (*Crabb: Eng. Synon.*)

* **for-bĭd′-ḍạnçe,** *s.* [Eng. *forbid; -ance.*] The act of forbidding, prohibiting, or interdicting; a prohibition, an interdiction.

"How hast thou yielded to transgress
The strict *forbiddance,* how to violate
The strictest fruit forbidden?"
Milton: P. L., ix. 903.

for-bĭd′-ḍen, * **for-bid,** *pa. par.* or *a.* [FORBID, *v.*] Prohibited, interdicted.

"A monarch's errors are *forbidden* game."
Cowper: Table Talk, 114.

forbidden-fruit, *s.*

1. *Ord. Lang.:* The fruit of the tree of the knowledge of good and evil, which our first parents were commanded not to eat. What fruit it was is wholly unknown. (Gen. ii. 9; iii. 3–6, 11, 17.)

2. *Bot.:* Various species of Citrus (q.v.). In the West Indies, the London markets, and other parts of the British empire, it is *Citrus Paradisi,* a small-fruited variety of the Shaddock (*Citrus decumana*). The Forbidden-fruit of the French is the Sweet-skinned orange (a variety of the common orange (*C. Aurantium*); that of Italy a variety of the Lime (*C. Limetta*).

* **for-bĭd′-ḍen-lȳ,** *adv.* [Eng. *forbidden; -ly.*] In a forbidden manner; against commands.

"With all confidence he swears, as he had seen it,
That you have touched his queen *forbiddenly.*"
Shakesp.: Winter's Tale, i. 2.

* **for-bĭd′-ḍen-nĕss,** *s.* [Eng. *forbidden; -ness.*] The quality or state of being forbidden, prohibited, or interdicted.

"Nothing but *forbiddenness* of self-dispatch hindered his acting it."—*Boyle: Works,* i. 23.

†**for-bĭd′-dĕr,** *s.* [Eng. *forbid; -er.*] One who or that which forbids, prohibits, or interdicts anything; one who issues a prohibition or interdiction.

"Other care, perhaps,
May have diverted from continual watch
Our great *forbidder.*" *Milton: P. L.*, ix. 815.

for-bĭd′-dĭṅg, *pr. par., a., & s.* [FORBID, *v.*]

A. *As pr. par.:* (See the verb).

B. *As adjective:*

1. Issuing or uttering a prohibition or interdiction.

2. Repelling, repulsive, disagreeable; giving rise to abhorrence, aversion, or dislike.

"Towards the cottage: homely was the spot,
And to my feeling, ere we reached the door,
Had almost a *forbidding* nakedness."
Wordsworth: Excursion, bk. ii.

C. *As subst.:* The act of prohibiting or interdicting; a prohibition or interdiction.

"The *forbidding* of the Bible to be read in any vulgare tong."—*Sir T. More: Wales*, p. 245.

for-bĭd′-dĭṅg-nĕss, *s.* [Eng. *forbidding; -ness.*] A forbidding or repulsive quality; something which repels.

"There may be a *forbiddingness* in the person."—*Richardson: Sir C. Grandison*, iii. 264.

for-bĭd-ĭṅg-lȳ, *adv.* [Eng. *forbidding; -ly.*] In a forbidding, repulsive, or disagreeable manner; repulsively.

***for-bīnd′,** *v.t.* [A.S. *forbindan;* O. H. Ger. *farbindan.*] To bind strongly.

"Himm that in ewarrterrne lith
Forrbindenn and forrthrungenn." *Ormulum*, 6,168.

***for′-bĭsh,** *v.t.* [FURBISH.]

***for-bis-en,** ***for-bisne,** *s.* [A.S. *fore-bysn.*] An example.

"He gaf us *forbisne* of adinodnesse." — *Old Eng. Homilies*, ii. 89.

***for-bis-en-ing,** *s.* [FORBISEN.] A parable, an allegory.

"I sal open mi mouth in *forbiseninges.*"
E. Eng. Psalter, Ps. lxxii. 2.

***for-bī′te,** *v.t.* [Dut. *verbijten;* L. Ger. *verbiten.*] To bite or eat away utterly.

"*Forbiteth* the blosmes right to the bare leves."
Piers Plowman, 10,857.

***for-bled,** ***for-bledd,** *a.* [L. Lat. *verblöden;* Sw. *forblöda;* Dan. *forblöde.*] Covered with blood.

"Thi blyssyd bodye alle *forbled.*"
Legends of Holy Rood, p. 191.

***for-blīnd′,** ***for-blend,** *v.t.* [M. H. Ger. *verblenden;* Sw. *forblanda.*] To make quite blind.

"Sinne *forrblendeth* all thin heorrte."
Ormulum, 2,984.

***for-blōw′,** *v.t.* [A.S. *forblawan.*] To drive or toss about with the wind.

"The ship which is . . . forstormed and *forblowe.*"
Gower, i. 160.

***for-bod,** ***for-bode,** ***for-bot,** *s.* [A.S. *forbod;* Dut. *verbod;* Dan. *forbut;* Sw. *förbúd.*] A prohibition, an interdiction.

"Again the kinges *forbode.*"
Legend of St. Katherine, 2,230.

***for-bod-en,** *pa. par.* or *a.* [FORBID, *v.*]

for-bö′re, *pret. & pa. par.* [FORBEAR, *v.*]

for-bör′ne, *pa. par.* [FORBEAR, *v.*]

***for-bow,** ***for-buw-en,** ***for-bugh-en,** *v.t.* [A.S. *forbýgan.*] To avoid, to shun.

"Heo . . . forbereth ham and *forbuweth* ham."—*Ancren Riwle*, p. 380.

for-breăk′, ***for-breke,** *v.t.* [A.S. *forbrecan;* O. H. Ger. *farbrechan;* M. H. Ger. *verbrechen;* Dut. *verbreken.*] To break utterly or to pieces; to destroy utterly.

"The snare *forbreken* is in al
And we losed ere awal."
Early Eng. Psalter, Ps. cxxiii. 7.

***for-brû′ise,** ***for-brose,** ***for-bruse,** *v.t.* [Pref. *for-* (1), and Eng. *bruise* (q.v.).] To bruise exceedingly.

"Al *forbrosed* bothe bak and syde."
Chaucer: C. T., 16,099.

***for-buȳ′,** ***for-bigge,** ***for-bugge,** *v.t.* [Pref. *for-* (1), and Eng. *buy* (q.v.).]

1. To buy off.

"He which . . . for no gold may be *forbought*
The deth." *Gower*, i. 212.

2. To deliver, to release.

"Y the Lord that shal lede you out and *forbigge* in an ouerpassing arm."—*Wycliffe: Exodus* vi. 6.

***for-buȳ′-ĕr,** ***for-bi-er,** ***for-big-ger,** *s.* [Eng. *forbuy; -er.*] One who releases or redeems; a redeemer.

"I wote, he seith, 'that my *forbier* lyueth."—*Wycliffe; Epistle* (Pref.), p. 68.

for-bȳe′, ***for-by,** ***for-bi,** *prep. & adv.* [Dut. *voorbij;* Low Ger. *vorbi, vörbi;* Sw. *förbi;* Dan. *forbi.*]

A. *As preposition:*

*1. Through, along.

"Alisaunder . . . flyngeth gode showr hem *forby.*"
Alisaunder, 5,487.

*2. Beyond, above.

"I helded mi hert to do, *forbi* all thinge, thi rightwisenesse." *E. Eng. Psalter, Ps.* cxviii. 112.

3. Besides, over and above, in addition to.

*4. Near to, beside, hard by.

"To rest him selfe *forby* a fountain side."
Spenser: F. Q., I. vii. 2.

*5. According to.

"*Forbi* min red quath thu non del."
Genesis & Exodus, 3,987.

*6. With, by.

"He tooke her up *forby* the lilly hand."
Spenser: F. Q., V. xi. 17.

***B.** *As adv.:* By, past, along.

"As sche cam *forby* ther the juge stood."
Chaucer: C. T., 13,540.

***for-car′ve,** ***for-cerve,** *v.t.* [A.S. *forceorfan.*] To cut to pieces.

"A . . . *forcarf* ys cappe of maille."
Sir Ferumbras, 731.

***for-cat,** ***foir-chet,** *s.* [Fr. *fourchette.*] A rest for a musket.

"That euerie ane of thair nychtbouris burgessis be furnist with ane pik, ane halbert or tua handit suorde, or ells ane muscat with *forcat*, beadrole, and heidpece."—*Acts Jas. VI.*, 1598 (ed. 1814), p. 196.

fōrçe (1), ***fors,** *s.* [Fr. *force*, from Low Lat. *fortia* = strength, from Lat. *fortis* = strong; O. Sp. *forza;* Sp. *fuerza;* Ital. *forza;* Port. *força.*]

I. *Ordinary Language:*

1. Strength, vigour, might, active power.

"Withoute whom al *force* is febilnesse."
Lydgate: Minor Poems, p. 247.

2. Violence; power exerted against the will or consent; coercion.

"For *force* or fraud, resistance or escape."
Scott: The Poacher.

3. Necessity. [PERFORCE.]

"Then of *force* must your oblations be."
Shakesp.: Lover's Complaint, 223.

4. The power or energy exerted by a moving body: as, the *force* of the wind or waves.

5. Virtue; efficacy.

"This flower's *force* in stirring love."
Shakesp.: Midsummer Night's Dream, ii. 2.

6. Full intent; meaning.

"I understand very clearly the *force* of the term."—*Burke: Sublime & Beautiful*, pt. iii., § 2.

7. Validity; legality.

"A testament is of *force* after men are dead."—*Hebrews* ix. 17.

8. Moral power or efficacy to convince the mind; persuasive or convincing power.

"No definitions, no suppositions of any sect, are of *force* enough to destroy constant experience."—*Locke*

*9. Matter, importance; ground for care or anxiety.

"What *fors* were it though al the town bihelde?"
Chaucer: Troilus & Cressida, ii. 378.

10. Power or strength in war; an armament; troops; naval or military array, with their equipment and appurtenances. (Frequently in the plural.)

"O Thou! whose captain I account myself,
Look on my *forces* with a gracious eye."
Shakesp.: Richard III., v. 3.

11. A body of men trained for action in any way: as, a police *force*.

II. *Technically:*

1. *Law:* Unlawful violence done or offered to person or property.

2. *Physics:* An influence or exertion which, if made to act on a body, has a tendency to move it when at rest, or to affect or stop its progress if it be already in motion. The strength of man's arms is a force, so is the power of a horse or ox to pull a vehicle, or turn a wheel, or set in action an agricultural machine. Gravity, friction, elasticity of springs or gases, electrical or magnetical attraction or repulsion are forces.

3. *Mental Philos., &c.:* [MORAL FORCE].

¶ (1) *Accelerated force:*

Physics: The increased force which a body exerts in consequence of the acceleration of its motion.

(2) *Active force:*

Physics: Force which tends to move another body from a state of rest.

(3) *Animal force:*

Physics: The muscular strength of man, horses, asses, cattle, or other animals viewed as a moving power.

(4) *Centrifugal force:* [CENTRIFUGAL].

(5) *Centripetal force:* [CENTRIPETAL].

(6) *Composition of forces:*

Physics: A force produced by two other ones acting on a body. If they operate in the same direction the resultant or the resulting force will be the sum of both. If the two forces act in opposite directions and are equal, they will make the body remain at rest; if they be unequal, they will move in the direction of the greater one, and with a force equivalent to their difference. If the lines of direction make an angle with each other, the resultant will be a mean force in an intermediate direction. If many forces act, the resultant is the line of motion or state of rest produced by their conjoint action. [*Resolution of Forces;* PARALLELOGRAM.]

(7) *Conservation of force*, or *of energy*, or *of vis viva:*

Physics: The doctrine or principle that in all cases force is conserved—*i.e.*, kept in existence even when it appears to perish. Just as a certain definite amount of matter exists in the universe, to which man cannot add, and from which he cannot subtract an atom, so a definite amount of force, incapable of being increased or diminished, exists like the former, in the universe. It can, however, be transformed so as to look quite unlike its former self; but in every case the force or energy communicated to a body or system of bodies is withdrawn from some fund or energy previously existing. [*Correlation of force.*]

(8) *Correlation of force, energy*, or *vis viva:*

Physics: The doctrine or principle that the different kinds of force in the universe are so correlated together that any one can be transformed into an exactly equivalent amount of another. There is equality when one can do precisely the same amount of work as any other. It has long been known that in a machine, the screw for example, what is gained in power is lost in velocity, and *vice versâ*. At first sight motion and heat seem to have no relation to each other; but if a moving body be suddenly arrested in its career, as, for instance, a bullet by a target, heat will be generated, and the same number of units of the work which the motion was capable of effecting can be achieved also by the heat. Conversely, a certain amount of heat can produce an equivalent one of motion; thus the working energy communicated to the piston of a steam-engine is withdrawn from the heat of the steam, and exactly balances the latter. Similarly, when the form of a body is changed by the action of forces, in the way that a spring may be coiled up, the exact amount of force requisite to roll it into form will exist as potential energy in the spring.

(9) *Effective force:* [VERTICAL].

(10) *Equilibrium of forces:*

Physics: The action of forces which, balancing each other, produce an equilibrium or state of balance, or rest in the body or bodies on which they operate.

(11) *Impressed force:* [VERTICAL].

(12) *Impulsive force:*

Nat. Phil.: A force which acts on a body for an unappreciably short time, as when one body strikes another. It is called also an Instantaneous force (q.v).

(13) *Instantaneous force:* [*Impulsive force*].

(14) *Kinetic force:*

Physics: The actual force excited by a moving body as distinguished from the potential force which it is capable of creating.

(15) *Measure of force:*

Physics: The measurement of the magnitude of a force, which is done by noting the momentum which it communicates to a body in a unit of time. [*Unit of force.*]

(16) *Mechanical force:*

Physics: Force of a mechanical nature acting on material bodies. It may be either that of the active force of a body in motion, or the tension or resistance opposed by a body at rest.

(17) *Molecular forces:*

Nat. Phil.: Forces which by means of certain attractions and repulsions, retain the atoms of matter side by side without their touching each other. [ATOM; MOLECULES.]

(18) *Moments of force:* [MOMENT.]

(19) *Moral force:*

Mental Phil.: Force operating on the human mind as distinguished from Physical force (q.v.). A threat is the exertion of moral force, a blow is the application of physical force.

(20) *Natural forces:*

Nat. Phil.: The physical agents which act upon matter. Specif. gravitation, heat, light, magnetism, and electricity.

(21) *Parallelogram of forces:* [PARALLELOGRAM.]

(22) *Physical force:*

Ord. Lang. & Physics: The operation of any thing physical or mechanical on a material body. It is opposed to Moral force (q.v.).

(23) *Polar forces:*

Magnetism, Elect., &c.: Forces acting at the two opposite poles of a body.

(24) *Polygon of forces:* [POLYGON].

(25) *Potential force:*

Physics: The whole force which a body in motion can exert, as distinguished from the kinetic force which it is exerting at the specific moment of time.

(26) *Resisting & retarding forces:*

Physics: Forces which tend to resist or retard the progress of a moving body.

(27) *Resolution of forces:*

Physics: The resolution or decomposition of a force into the forces which by their conjoint action produced it.

(28) *Retarding forces:* [*Resisting forces*].

(29) *Triangle of forces:* [TRIANGLE].

(30) *Unit of force:*

Physics: The force which, acting on a pound of matter, would in one second produce a velocity of a foot per second.

¶ (1) *Of force:* Of necessity; necessarily.

"We must, *of force*, dispense with this decree;
She must lie here of mere necessity."
Shakesp.: Love's Labour's Lost, i. 1.

* (2) *No force:* No matter.

"*No force*, I wote wheder I shalle."
Towneley Mysteries, p. 16.

* (3) *To make force,* * *To give force:* To care, to be concerned.

"Thereof *mad* thai no *force*."
Robert de Brunne, p. 204.

(4) *To come into force:* To be enforced; to be carried out.

¶ (1) Crabb thus discriminates between *force*, and *violence:* "Both these terms imply an exertion of strength; but the former in a much less degree than the latter. *Force* is ordinarily employed to supply the want of a proper will, *violence* is used to counteract an opposing will. *Force* is mostly conformable to reason and equity; *violence* is always resorted to for the attainment of that which is unattainable by law. In an extended and figurative application to things, these terms convey the same general idea of exerting strength." (*Crabb: Eng. Synon.*)

(2) For the difference between *force* and *energy*, see ENERGY.

force-piece, *s.*

Min.: A piece of timber placed in a level shaft to keep the ground open.

force-pump, *s.*

1. *Mech.:* A pump which delivers the water under pressure, so as to eject it forcibly or deliver it at an elevation. The term is used in contradistinction to a lift-pump, in which the water is lifted, and simply runs out of the spout. The single-acting force-pump is that in which the lift and delivery are alternate. The double-acting is that in which the passages are duplicated, so that a lift and delivery are obtained by each motion of the plunger; the pump has a distinct water-way both above and below the piston, so as both to draw and force water at each stroke, and thus cause a continuous stream, which is rendered more uniform by an air-chamber.

2. *Steam-eng.:* The boiler-supply pump sometimes connected to the piston-rod of the cylinder of a locomotive.

fōrçe (2), *s.* [Dan. *fos*; Icel. *foss, fors.*] A waterfall.

"After dinner I went along the Milthrope turnpike four miles to see the falls or *force* of the river Kent."—*Gray: Lett. to Dr. Wharton.*

fōrçe (1), * **forse,** *v.t. & i.* [Fr. *forcer*, from *force* = strength; Sp. *forzar*; Port. *forçar*; Ital. *forzare.*]

A. *Transitive:*

1. To compel or constrain by force or superior power to do or to forbear from any act.

"I have been *forced* to use the cant words of Whig and Tory."—*Swift: Examiner.*

* 2. To enforce, to urge, to exert.

"High on a mounting wave my head I bore,
Forcing my strength, and gathering to the shore."
Dryden: Virgil; Æneid vi. 487.

3. To drive, impel, push, or press by main strength.

"Thou shalt not destroy the trees by *forcing* an axe against them."—*Deut.* xx. 19.

4. To drive or drag away by violence or might.

"*Forced* from home and all its pleasures,
Afric's coast I left forlorn."
Cowper: Negro's Complaint.

5. To gain or draw by violence or power; to extort. (Followed by *from*.)

"If they *forced* from me one kind look or word."
Dryden. (*Johnson.*)

6. To compel by strength of evidence; to compel morally; as, To *force* conviction upon a person.

7. To press with force or energy.

"*Forcing* our own opinions upon others."—*Clarke Sermons*, vol. i., ser. 48.

* 8. To storm; to take or enter by violence.

"Troy walled so high,
Th' Atrides might as well have *forced* the sky."
Waller: His Majesty's Repairing of St. Paul's, 60.

9. To ravish; to violate by force.

"To do a murderous deed, to rob a man,
To *force* a spotless virgin's chastity."
Shakesp.: 2 Henry VI., v. 1.

10. To excogitate or extort, not naturally, but by wresting, straining, or distorting of ideas; to strain, to distort.

"Our general taste in England is for epigram, turns of wit, and *forced* conceits."—*Addison: Spectator.*

11. To compel oneself to give utterance or expansion to; to assume: as, To *force* a smile, To *force* a show of interest.

12. To bring to maturity before the natural or ordinary time; to cause to ripen or produce fruit prematurely; to cause to grow or ripen by artificial heat.

13. To endeavour to produce intellectual results at a premature age: as, To *force* a child's mental faculties.

* 14. To man; to garrison; to strengthen or furnish with soldiers; to reinforce.

"Were they not *forced* with those that should be ours,
We might have met them dareful, beard to beard."
Shakesp.: Macbeth, v. 5.

* 15. To put in force; to enact; to enforce; to make binding.

"What can the church *force* more?"
J. Webster. (*Webster.*)

* 16. To care for, to regard, to value.

"I *force* not argument a straw."
Shakesp.: Rape of Lucrece, 1,021.

* **B.** *Intransitive:*

1. To lay any stress; to care; to be concerned; to hesitate.

"Your oath once broke, you *force* not to forswear"
Shakesp.: Love's Labour's Lost, v. 2.

2. To think of importance.

"I *force* not of such fooleries."—*Camden; Remains; Wise Speeches.*

3. (*Impersonally*): To be of importance; to signify.

"It little *forceth* how long a man liue, but how wel and vertuously."—*Udal: Mark* v.

4. To use force or violence; to strive, to endeavour.

"Howbeit in the ende, perceiving those men did more fiercely *force* to gette up the hill."—*North: Plutarch.*

¶ For the difference between to *force* and to *strain*, see STRAIN.

* **fōrçe** (2), *v.t.* [Fr. *farcer* = to stuff.]

1. To stuff.

"Malice *forced* with wit."
Shakesp.: Troilus & Cressida, v. 1.

2. To exaggerate.

"With fables vaine my historie to fill,
Forcing my good, excusing of my ill."
Mirrour for Magistrates, p. 52.

* **force-a-ble,** *a.* [FORCIBLE.]

fōrçed, *pa. par. & a.* [FORCE, *v.*]

A. *As pa. par.:* (See the verb).

B. *As adjective:*

1. Compelled, constrained.

2. Strained, affected, unnatural: as, a *forced* style, a *forced* metaphor.

* **fōrç´-ĕd-lȳ,** *adv.* [Eng. *forced*; *-ly.*] In a forced, strained, or unnatural manner; constrainedly; unnaturally.

* **fōrç´-ĕd-nĕss,** *s.* [Eng. *forced*; *-ness.*] The quality or state of being forced, strained, or unnatural.

"Against the *forcedness* and incongruity of this sense much might be said."—*Worthington: On the Millennium*, p. 2.

* **fōr´çe-fûl,** *a.* [Eng. *force*; *-ful(l).*]

1. Full of or possessing force, power, or violence; forcible.

"Were it by chance, or *forceful* destiny."
Dryden: Palamon & Arcite, ii. 11.

2. Impelled with force or violence.

"Against the steed he threw
His *forceful* spear."
Dryden: Virgil; Æneid ii. 65.

3. Violent, impetuous.

"Why, what need we'
Commune with you of this? but rather follow
Our *forceful* instigation?"
Shakesp.: Winter's Tale, ii. 1.

* **fōr´çe-fûl-lȳ,** *adv.* [Eng. *forceful*; *-ly.*] In a forcible, violent, or impetuous manner; with force or violence.

* **fōr´çe-lĕss,** *a.* [Eng. *force*; *-less.*] Having little or no force or power; feeble, weak, impotent.

"For feeble heart and *forceless* hand."
Scott: Rokeby, i. 24.

* **fōr´çe-lĕt,** * **force-lette,** * **forse-let,** * **fors-let,** *s.* [O. Fr. *forcelet*, from Low Lat. *forcelletum.*] A little fort or fortress; a castle.

"In Egypt there ben but fewe *forcelettes* or castelles."—*Maundeville*, p. 47.

* **fōr´çe-lȳ,** *adv.* [Eng. *force*; *-ly.*] Vehemently, violently.

"Quhen thay war maist *forcely* given to the execucion thairof, tithingis come that the Volschis war cummand."—*Bellendene: Livius*, p. 202.

fōr´çe-mēat, * **farce-meat,** *s.* [Eng. *force* (2), v., and *meat.*]

Cook.: Meat chopped fine, seasoned, and served up alone, or used as stuffing.

* **fōr´çe-mĕnt,** * **forse-men,** *s.* [Eng. *force*; *-ment.*]

1. The act of forcing or straining.

"Without meere *forcement* of lawe."—*Fox: Martyrs*, p. 137.

2. A fort, a strong place.

"*Forsemens* or strengthis of thin heghe walles shul togiderr fallen."—*Wycliffe: Isaiah* xxv. 12.

for´-çĕps, *s.* [Lat. = pincers, tongs, from *formus* = hot, and *capio* = to take.]

1. A tool applied to grasping, and consisting of two portions pivoted together, the ends forming respectively handles and jaws. A forceps is used by dentists in extracting teeth; by accoucheurs in steadying the head of the fetus in delivery; by surgeons for extracting anything from a wound, &c. Forceps, the arms of which are automatically locked when closed, are known as Locking-forceps (q.v.).

"*Forceps* properly signifies a pair of tongs; but is used for an instrument in chirurgery, to extract anything out of wounds, and the like occasions."—*Quincey.*

2. *Zool.:* Anything shaped like a pair of scissors, as the two projecting movable bodies which terminate the abdomen of an Earwig (q.v.).

"It is furnished with a *forceps* above the mouth."—*Goldsmith: The Bee*, No. 4.

fōrç´-ẽr (1), *s.* [Eng. *forc(e)*; *-er.*]

I. *Ord. Lang.:* One who or that which forces, compels, or constrains.

"To be the *forcer* of a herd."
Chapman: Homer; Hymn to Hermes, pt. iii.

II. *Technically:*

1. *Mech.:* A solid piston applied to pumps for the purpose of producing a constant flow of water, or of raising water to a greater height than is possible by the pressure of the atmosphere.

2. *Min.:* A small pump worked by hand; used in sinking pits, draining cellars, &c.

"The usual means for the ascent of water is either by suckers or *forcers*."—*Wilkins: Dædalus*, vol. ii., ch. xv.

***fôrç'-ẽr** (2), ***fors-er,** *s.* [O. Fr. *forcier, forsier;* Ital. *forziere,* from Low Lat. *forsarius.*] A chest, a box, a casket.

"Of a *forcer* a fair bok sche raught."

"It is only in local glimpses and by significant fragments . . . that we can hope to impart some outline or *foreshadow* of this doctrine."—*Carlyle: Sartor Resartus*, bk. i., ch. viii.

* **fōre-shāme′,** *v.t.* [Pref. *fore-*, and Eng. *shame* (q.v.).] To bring shame or reproach upon; to shame, to disgrace.

"Oh bill, *foreshaming*
Those rich-left heirs, that let their fathers lie
Without a monument."
Shakesp.: Cymbeline, iv. 2.

* **fōre-shā′pe,** *v.t.* [Pref. *fore-*, and Eng. *shape* (q.v.).] To shape or form beforehand; to prepare, to mould.

"And we shall so *foreshape* the minds of men."
Taylor: Edwin the Fair, iii. 5.

* **fōre-shew′ (ew as ō),** *v.t.* [FORSHOW.]

fō′re-shĭp, * **fore-schyp,** *s.* [Pref. *fore-*, and Eng. *ship;* A.S. *forscip;* Dut. *voorschip.*] The fore part of a ship; the forecastle.

"The shipmen would have cast anchors out of the *foreship*."—*Acts* xxvii. 30.

fō′re-shōre, *s.* [Pref. *fore-*, and Eng. *shore* (q.v.).]

1. *Ord. Lang.:* The part of land immediately in front of the shore; the part lying between high and low-water marks.

2. *Hydraulic Engineering:*

(1) A bank a little distance from a sea-wall to break the force of the surf. [FORELAND.]

(2) The seaward projecting, slightly inclined portion of a breakwater.

fōre-short′-en (or as **short′n),** *v.t.* [Pref. *fore-*, and Eng. *shorten* (q.v.).]

"'Tis a greater mystery in the art
Of painting, to *foreshorten* any part
Than draw it out."
Butler: Miscellaneous Thoughts.

Persp.: To represent objects on a plane surface as they appear to the eye, by means of foreshortening.

fōre-short′-en-ĭng (or as **short′n),** *s.* [Pref. *fore-*, and Eng. *shortening* (q.v.).]

Persp.: The art of representing objects on a plane surface as they appear to the eye, depending upon a correct knowledge of form, perspective, and chiaroscuro. It is one of the most difficult studies in the art of design, and, when executed with skill, constitutes the excellence of the master.

"The greatest parts of the body ought to appear foremost: and he forbids the *foreshortenings*, because they make the parts appear little."—*Dryden: Dufresnoy.*

fō′re-shouts, *s. pl.* [Etym. doubtful.]

Naut.: The double ropes which fasten the mainsail of a ship. (*Palsgrave.*)

fōre-shōw′, *v.t.* [Pref. *fore-*, and Eng. show (q.v.).]

1. To discover a thing before it happens; to predict, to anticipate, to forebode, to prognosticate.

"Did he not desperate impulse feel,
Headlong to plunge himself below,
And meet the worst his fears *foreshow!*"
Scott: Lady of the Lake, ii. 31.

2. To represent before it comes; to typify; to foreshadow.

* **fōre-shōw′,** *s.* [FORESHOW, *v.*] A sign or token given beforehand; a prognostication; a foreboding.

fōre-shōw′-ĕr, *s.* [Eng. *foreshow; -er.*] One who or that which foreshadows, foretells, or predicts.

fō′re-shrouds, *s. pl.* [Pref. *fore-*, and Eng. *shrouds* (q.v.).]

Naut.: [SHROUDS].

* **fō′re-sīde,** *s.* [Pref. *fore-*, and Eng. *side* (q.v.).]

1. The front side, the front.

2. A specious outside or show.

"Now when these counterfeits were thus uncased
Out of the *foreside* of their forgerie."
Spenser: F. Q., V. iii. 39.

fō′re-sight (*gh* silent), *s.* [Pref. *fore-*, and Eng. *sight* (q.v.).]

I. *Ordinary Language:*

1. The act or faculty of foreseeing; prescience; perspicacity.

"Let Eve, for I have drenched her eyes,
Here sleep below, while thou to *foresight* wakest."
Milton: P. L., xi. 368.

2. A provident care for futurity; forethought; care in guarding against evil.

"Make a random expense without plan or *foresight*."—*Burke: Letter to a Noble Lord.*

II. *Tech.:* [FORE-SIGHT].

¶ Crabb thus discriminates between *foresight*, *forecast*, and *premeditation:* "*Foresight*, from seeing before, denotes the simple act of the mind in seeing a thing before it happens: *forecast*, from casting the thoughts onward, signifies coming at the knowledge of a thing beforehand by means of calculation; *premeditation*, from *meditate*, signifies obtaining the same knowledge by force of meditating or reflecting deeply. *Foresight* is the general and indefinite term; we employ it either on ordinary or extraordinary occasions; *forecast* and *premeditation* mostly in the latter case: all business requires *foresight;* state concerns require *forecast: foresight* and *forecast* respect what is to happen; they are the operations of the mind in calculating futurity: *premeditation* respects what is to be said or done: it is a preparation of the thoughts and designs for action; by *foresight* and *forecast* we guard against evils and provide for contingencies; by *premeditation* we guard against errors of conduct." (*Crabb: Eng. Synon.*)

* **fō′re-sight-ĕd** (*gh* silent), *a.* [Eng. *foresight; -ed.*] Possessing or acting with foresight or forethought; provident, prudent, foreseeing.

* **fōre-sight′-fŭl** (*gh* silent), *a.* [Eng. *foresight; -ful(l).*] Full of foresight or forethought; prescient, provident.

"Give us *foresightful* minds; give us minds to obey
What foresight tells." *Sidney: Arcadia*, bk. ii.

* **fō′re-sign** (*g* silent), *s.* [Pref. *fore-*, and Eng. *sign* (q.v.).] Divination.

* **fōre-sĭg′-nĭ-fȳ,** *v.t.* [Pref. *fore-*, and Eng. *signify* (q.v.).] To betoken beforehand; to foreshow; to typify; to adumbrate.

"Discoveries of Christ already present, whose future coming the Psalms did but *foresignify*."—*Hooker: Ecclesiastical Polity.*

fō′re-skĭn, *s.* [Pref. *fore-*, and Eng. *skin* (q.v.).] The skin which covers the *glans penis;* the prepuce.

"Thine own hand
An hundred of the faithless foe shall slay
And for a dower their hundred *foreskins* pay."
Cowley: Davideis, iii.

* **fō′re-skĭrt,** *s.* [Pref. *fore-*, and Eng. *skirt* (q.v.).] The loose hanging portion of a coat in front.

"Honour's train
Is longer than his *foreskirt*."
Shakesp.: Henry VIII., ii. 3.

* **fōre-slăck′,** *v.t.* [Pref. *fore-* = for, and Eng. *slack* (q.v.).]

1. To lose or neglect through idleness; to omit.

"It is a great pity that so good an opportunity was omitted, and so happy an occasion *foreslacked*, that might have been the eternal good of the land."—*Spenser: State of Ireland.*

2. To delay, to hinder, to put off.

"Through other great adventures hethertoo
Had it *forslackt*." *Spenser: F. Q.*, V. xii. 3.

fō′re-sleēve, * **fore-sleve,** *s.* [Pref. *fore-*, and Eng. *sleeve* (q.v.).] That part of a sleeve between the wrist and the elbow.

"Of a freres frokke
Were the *foresleeves*." *P. Plowman*, 2,635.

* **fōre-slĭp′,** *v.t.* [Pref. *fore-*, and Eng. *slip* (q.v.).] To lose before.

"Amends of the former time *foreslipt*."—*P. Holland: Pliny*, bk. xix., ch. vi.

* **fōre-slō′w,** * **for-slowe,** * **for-sloe,** *v.t.* & *i.* [Pref. *fore-* = for, and Eng. *slow* (q.v.).]

A. *Transitive:*

1. To delay; to hinder; to impede; to obstruct.

"His journeys to *foreslow*."
Drayton: Poly-Olbion, p. 35.

2. To neglect; to omit.

"Why she did her wonted course *forslowe*."
Spenser: F. Q., VII. vi. 16.

3. To render slow; to delay.

"By no meanes my way I would *forslowe*."
Spenser: F. Q., IV. x. 15.

B. *Intrans.:* To be dilatory or slow; to delay; to loiter.

"*Foreslow* no longer, make we hence amain."
Shakesp.: 3 Henry VI., ii. 3.

* **fōre-snăf′-fle,** *v.t.* [Pref. *fore-*, and Eng. *snaffle* (q.v.).] To restrain by anticipation.

"Had not I *foresnaffled* my mynde by votarye promise
Not toe yoke in wedlock?"
Stanyhurst: Virgil; Æneid iv. 17.

* **fōre-spēak′** (1), *v.t.* [Pref. *fore-*, and Eng. *speak* (q.v.).] To speak, tell, or declare beforehand; to predict; to foretell; to foresay.

* **fōre-spēak′** (2), *v.t.* [FORSPEAK.]

1. To bring bad luck upon by the use of evil words; to damn.

"She threatens me wi' mischiefs and *forespeaks* me."—*Scott: Bride of Lammermoor*, ch. xxxiv.

2. To forbid; to gainsay.

* **fōre-spēak′-ĕr,** *s.* [Eng. *forespeak* (1); *-er.*]

1. *Ord. Lang.:* One who speaks on behalf of another; an introducer.

"Be, as it were, *forespeakers* for his entertainment."—*Breton: Grimello's Fortunes*, p. 10.

2. *Scots Law:* The foreman of a jury.

* **fōre-spēak′-ĭng,** *s.* [Pref. *fore-*, and Eng. *speaking* (q.v.).]

1. A prediction; a prophecy; a prognostication.

"Old Godfrey of Winchester thinketh no ominous *forespeaking* to lie in names."—*Camden: Remains.*

2. A preface.

* **fō′re-speēçh,** * **vore-speche,** *s.* [Pref. *fore-*, and Eng. *speech* (q.v.).] A preface.

"The *vorespeche* of thise boc uolyynde."—*Ayenbite*, p. 2.

* **fōre-speēd′,** *v.t.* [Pref. *fore-*, and Eng. *speed* (q.v.).] To surpass in speed; to outrun.

* **fōre-spĕnd′,** *v.t.* [Pref. *fore-* = for, and Eng. *spend* (q.v.).] To weary out; to exhaust.

"After him came spurring hard,
A gentleman, almost *forespent* with speed."
Shakesp.: 2 Henry IV., i. 1.

* **fōre-spĕnt′,** *a.* [Pref. *fore-*, and Eng. *spent* (q.v.).]

1. Bestowed before.

"Towards himself, his goodness *forespent* on us,
We must extend our notice."
Shakesp.: Cymbeline, ii. 3.

2. Past, foregone, previous.

"You shall find his vanities *forespent*
Were but the outside of the Roman Brutus."
Shakesp.: Henry V., ii. 4.

* **fōre-spōk′-en** (or as **spōk′n),** *a.* [Pref. *fore-*, and Eng. *spoken* (q.v.).] Previously spoken, uttered or said.

* **fōre-spŭr′-rĕr,** *s.* [Pref. *fore-*, and Eng. *spurrer* (q.v.).] One who rides before; a messenger; a harbinger.

"This *forespurrer* comes before his lord."
Shakesp.: Merchant of Venice, ii. 9.

fŏr′-ĕst, *s.* & *a.* [O. Fr., from Low Lat. *foresta* = a forest; *forestis* = an open space of ground over which the right of the chase were reserved, from Lat. *foris* = out of doors; Fr. *forêt;* Ital. *foresta;* O. H. Ger. *forst.*]

A. *As substantive:*

I. *Ord. Lang.:* An extensive wood, or tract of wooded country; a wild uncultivated tract of ground interspersed with wood.

"Hys *forest* and hys wodes, and mest the nywe *forest*,
That ys in Southhamtessyre."
Robert of Gloucester, p. 375.

II. *Technically:*

1. *Botanical Geog.:* Of the acreage of Great Britain about 4 per cent. are in woods; of Ireland, 1⅝ per cent; of France, 16 per cent.; of Prussia, 23 per cent; of Austria, 31 per cent.; and of Russia, 42½ per cent. Of the

United States, once almost a continuous wilderness of trees, only 25 per cent. of the surface is now covered with wood. The British Empire has of forest, or of woods, 340,000,000 acres, which is more than is possessed by any other country in the world. In England, 2,500,000 acres are wooded. Of these, over 100,000 acres belong to the three Crown forests—viz., Windsor Park, with about 10,000 acres; the New Forest, with about 70,000 acres, to afforest which William the Conqueror laid waste the country between the Test and the sea; and the Forest of Dean, with about 22,000 acres, one half of which is under enclosure for the growth of navy timber. Epping Forest, recovered by a lawsuit commenced by the Corporation of London, was dedicated for ever to the use of the people by the Queen on May 6, 1882. The area thus given over was 5,600 acres. It is a primeval forest of hornbeam, beech, and oak. During the present reign the royal forests of Hainault, Whittlewood, and Wichwood have been disafforested.

2. *Meteor.:* The clearing of forests in America, France, &c., has made the climate less extreme than formerly—that is, the winters have been less cold and the summers less hot. Forests do not increase the rainfall, but they prevent it from easily running to waste. The destruction of the forests in the once fertile Palestine, Syria, and Cyprus has made those countries comparatively barren.

3. *Geol.:* The influence of forests in the economy of nature is conservative. A covering of herbage and shrubs tends to protect a loose soil from being carried away by rain or even by the ordinary action of a river, and to prevent hills of loose sand from being blown away by the wind. When trees, in a cold climate, on their fall obstruct the drainage of a forest, peat is in many cases generated, and peat-bogs now mark the site of some old forests. Sometimes a depression of the land, a landslip, or some other cause, places a forest under the water. It is then said said to be Submerged (q.v.). If the waters are those of the ocean, it is said to be Submarine (q.v.). In certain cases insects can destroy a forest by killing the trees of which it is composed. At certain spots a fossil or buried forest exists: thus there is one in Norfolk, resting in some places on chalk, in others on the crag, and covered by drift. There is another in the Portland Purbeck: it is locally called the Dirt-bed (q.v.). Fossil forests are occasionally found in the coal measures.

* 4. *Law:*

(1) A certain territory of woody grounds and fruitful pastures, privileged for wild beasts, and fowls of forest, chase, and warren, to rest and abide in, in the safe protection of the king for his pleasure. Cowel, writing in A.D. 1724, said, "The properties of a forest are these: a forest, as it is strictly taken, cannot be in the hands of any but the king, who hath power to grant commission to a justice in eyre for the forest; the courts; the officers for preserving the vert and venison, as the justices of the forest, the warden or keeper, the verders, the foresters, agistors, regarders, bailiffs, and beadles. The chief property of a forest is the swainmote, which is no less incident to it than the court of pyepowder to a fair." Now, a forest, though properly the king's, can be vested in a subject; and such forest courts as the swainmote are obsolete. [FOREST-COURT, FOREST-LAWS.]

(2) The right or franchise of keeping, for the purpose of hunting, all animals pursued in field sport in a certain territory or precinct of woody ground and pasture.

B. *As adj.:* Of or pertaining to a forest; as, *forest* trees; sylvan, rustic.

> "Like crowded *forest* trees we stand,
> And some are marked to fall."
> *Cowper: Bill of Mortality.* (1787.)

¶ Crabb thus discriminates between *forest, chace,* and *park:* "*Forest, chace,* and *park* are all habitations for animals of venery; but the *forest* is of the first magnitude and importance, it being a franchise and the property of the king; the *chace* and *park* may be either public or private property. The *forest* is so formed of wood, and covers such an extent of ground, that it may be the haunt of wild beasts; of this description are the *forests* in Germany: the *chace* is an indefinite and open space that is allotted expressly for the *chace* of particular animals, such as deer; the *park* is an enclosed space that serves for the preservation of domestic animals." (*Crabb: Eng. Synon.*)

¶ Obvious compounds: *forest-bower* (*Scott*), *forest-cave, forest-crowned* and *forest-walk* (*Thomson*), *forest-glade, forest-path, forest-tree* (*Cowper*).

forest-bed, Cromer forest-bed, *s.*

Geol.: A bed at Cromer, in Norfolk, intervening between certain glacial strata and the subjacent chalk. (*Lyell.*)

* **forest-born,** *a.* Born in a forest or wild.

> "This boy is *forest-born,*
> And hath been tutored in the rudiments
> Of desperate studies."
> *Shakesp.: As You Like It,* v. 4.

forest-bug, *s.*

Entom.: A name given to more than one species of Pentatoma.

forest-court, *s.*

Old Law: A court instituted for the government of the royal forests, and for the punishment of all injuries done to the royal deer or venison, to the vert or greensward, and to the covert in which such deer are lodged. These are the courts of Attachments, of Regard, of Swainmote, and of Justice-seat. (*Blackstone: Comment.,* bk. iii., ch. 3.) No meeting of any of these courts, except one *pro forma,* has been held since the Revolution of 1688. An effort to revive them in connection with the Epping Forest litigation was stopped by the Court of Chancery, but the institution of verderers was perpetuated. [FOREST, II. 4; VERDERER.]

forest-fly, *s.*

Entom. (*Pl.*): A popular name for the insects belonging to the family Hippoboscidæ (q.v.). The name is given because one species, *Hippobosca equina,* parasitic upon the horse, is exceedingly abundant in the New Forest.

forest-food, *s.* Food derived from a forest; subsistance on the branches or woody fibres of trees.

> "The *forest-food* of such a species—*Elephas primigenius*—becomes as perennial as the lichens that flourish beneath the winter snows of Lapland."—*Owen: Brit. Foss. Rem.,* 262, 263.

forest-laws, *s. pl.*

Law: Laws for the regulation of the forest. These were instituted under the Conqueror, and were so severe that the *Saxon Chronicle* said he loved a deer as if he were its father. A man killing one might be mutilated and put to death. This was abolished by the Carta de Foresta (Forest Charter), granted by Henry III. in A.D. 1224. Gradually the forest laws fell nearly into desuetude. Charles I. attempted to revive them, and the Forest Court of Justice Seat fined certain persons heavily for encroachments on the forests committed three or four centuries previously. The Long Parliament put an end to these extortions. [FOREST-COURT.]

forest-marble, *s.*

Geol.: A stratum of lower oolitic age. The typical rock is generally an argillaceous limestone abounding in marine fossils. At Bradford, in Wiltshire, however, this is replaced by a mass of clay. In other places, again, there are rippled sandstones. From Bradford in Wilts to Tetbury in Gloucestershire there are rippled slabs of fissile oolite. The name Forest-marble is from Wichwood Forest, in Oxfordshire, where the finer kinds of the calcareous rock are quarried for marble.

forest-oak, *s.*

Bot.: A commercial name for a species of Casuarina, the timber of which is brought from Australia. In that country oak is the general name for the Casuarina genus which has no close affinity to the genuine Quercus (q.v.).

forest-science, *s.* The same as FORESTRY. (*Pen. Cyclo.,* x. 350.)

forest-sheriff, *s.* The guardian or keeper of a forest; a verderer.

> "No youthful baron's left to grace
> The *forest-sheriff's* lonely chase."
> *Scott: Marmion,* ii. (Introd.)

forest-spirits, *s.pl.*

Comp. Mythol.: Certain spirits said to haunt forests. In the Australian bush, according to the belief of the natives, demons whistle in the branches, and sneak among the trunks to seize the wayfarer; the same belief is found in Brazil, among the Karens, the negroes of Senegambia, and the Indians of North and South America; and the baleful shapes of terror that glide through our own woodlands are familiar still to peasant and poet. All these imaginary beings have been devised to account for the mysterious influences that beset the wanderer in the forest. In some cases the belief is that spirits do not roam through the forest at large, but inhabit particular trees, growing with their growth and losing power with their decay. A similar conception belonged to the mythology of Greece and Rome, and in all cases the spirit inhabitant was supposed to have supernatural power, and sometimes to utter oracles. (*Tylor.*) [SERPENT-WORSHIP, TREE-WORSHIP.]

* **fŏr'-ĕst,** *v.t.* [FOREST, *s.*] To cover or plant with trees; to convert into a forest.

* **fō're-staff,** *s.* [Pref. *fore-,* and Eng. *staff* (q.v.).]

Optics: An instrument formerly used at sea for taking the altitude of heavenly bodies, and also known as a cross-staff. The observer faces the object, the position being the reverse of that assumed in using the back-staff for a similar purpose. The forestaff has a straight square staff, graduated like a line of tangents, and four crosses or vanes which slide thereon. The first and shortest of these vanes is called the ten-cross, and belongs to that side of the instrument whereon the divisions begin at 3° and end at 10°. The next longer vane, called the thirty-cross, belongs to the side of the staff graduated from 10° to 30°. The sixty-cross belongs to the side graduated from 20° to 60°. The ninety-cross belongs to the side of the staff graduated from 30° to 90°.

fō're-tāste, *s.* [Pref. *fore-*, and Eng. *taste* (q.v).] A taste or experience of beforehand; anticipation of; partial enjoyment in advance; an antepast.

"It is the *foretaste* of heaven, and the earnest of eternity."—*South.*

fōre-tās'te, *v.t.* [Pref. *fore-*, and Eng. *taste* (q.v.).]

1. To taste before another.

"*Foretasted* fruit,
Profaned first by the serpent." *Milton: P. L.*, ix. 929.

2. To have a previous enjoyment or taste of; to have an antepast of; to anticipate.

fōre-tāst'-ēr, *s.* [Eng. *foretast(e); -er.*] One who tastes beforehand; one who has a foretaste or previous enjoyment of.

***fō're-tēam,** *s.* [Pref. *fore-*, and Lat. *temo* = a beam, a pole.] A front pole or shaft.

"Their chariots in their *foreteams* broke." *Chapman: Homer; Iliad* xvi. 352.

fōre-tĕll', *v.t. & i.* [Pref. *fore-*, and Eng. *tell* (q.v.).]

A. *Transitive:*

*1. To tell beforehand.

"These . . . as I *foretold* you, were all spirits." *Shakesp.: Tempest*, iv. 1.

2. To predict; to prophesy; to declare or tell an event before it happens.

3. To foretoken; to foreshow; to foreshadow.

"What art thou, whose heavy looks *foretell*
Some dreadful story hanging on thy tongue?" *Shakesp.: 3 Henry VI.*, ii. 1.

B. *Intrans.:* To prophesy; to utter a prophecy or prediction.

"One greater, of whose day he shall *foretell*." *Milton: P. L.*, xii. 242.

¶ Crabb thus discriminates between to *foretell*, to *predict*, to *prophesy*, and to *prognosticate*: "*Foretell* is the most general in its sense, and familiar in its application; we may *foretell* common events, although we cannot *predict* or *prophesy* anything important: to *foretell* is an ordinary gift; one *foretells* by a simple calculation or guess: to *predict* and to *prophesy* are extraordinary gifts; one *predicts* by a supernatural power real or supposed; one *prophesies* by means of inspiration. *Prediction* as a noun is employed for both the verbs *foretell* and *predict;* it is therefore a term of less value than *prophesy*. We speak of a *prediction* being verified, and a *prophecy* fulfilled. To *prognosticate* is an act of the understanding; it is guided by outward symptoms as a rule; it is only stimulated and not guided by outward objects: a physician *prognosticates* the crisis of a disorder by the symptoms discoverable in the patient." (*Crabb: Eng. Synon.*)

fōre-tĕll'-ēr, *s.* [Eng. *foretell; -er.*] One who or that which foretells; a predicter; a prognosticator.

"Others are proposed, not that the foretold events should be known; but that the accomplishment that expounds them may evince, that the *foreteller* of them was able to see them."—*Boyle: On Colours.*

"Sir Thomas Lovel, I as free *forgive* you,
As I would be *forgiven.*"
Shakesp.: Henry VIII., ii. 1.

B. *Intrans.:* To pardon or overlook any injury, fault, crime, or thing due.

¶ Crabb thus discriminates between to *forgive,* to *pardon,* to *remit,* and to *absolve:* "*Forgive* and *pardon* both signify not to give the punishment that is due: to relax from the rigour of justice in demanding retribution. *Forgive* is the familiar term; *pardon* is adapted to the serious style. Individuals *forgive* each other personal offences; they *pardon* offences against law and morals: the former is an act of Christian charity, the latter an act of clemency. . . . *Pardon,* when compared with *remission,* is the consequence of offence; it respects principally the person offending; it depends upon him who is offended; it produces reconciliation when it is sincerely granted and sincerely demanded. *Remission* is the consequence of the crime; it has more particular regard to the punishment; it is granted either by the prince or magistrates; it arrests the execution of justice. *Absolution* is taken in no other sense; it is the consequence of the fault or the sin, and properly concerns the state of the culprit." (*Crabb: Eng. Synon.*)

for-gĭv'-ęn, *pa. par.* or *a.* [FORGIVE.]

for-gĭve'-nĕss, * for-gefe-nesse, * for-yev-en-esse, * for-gif-ness, * for-gife-nesse, * for-gyf-nes, *s.* [A.S. *forgifenness, forgifnes;* Dut. *vergiffenis.*]

forlorn-hope, *s.*

Mil.: Those whose hope of emerging alive from a battle is of the most desperate character, from their being the first to bear the brunt of the action; used

* 1. (Originally) of the skirmishers in front of the army.

"Before the main battle of the Carthaginians he sets the auxiliaries and aid-soldiers, a confused rabble and medley of all sorts of nations, who at the *forlorn hope*, bearing the furious heat of the first brunt, might, if they did no other good, yet with receiving many a wound in their bodies, dull and turn the edge of the enemy's sword."—*P. Holland: Livy*, p. 765.

* 2. Skirmishers in front of the army without reference to the amount of danger which this exposed position involved.

"The light-armed *forlorn hope* of archers and darters of the Roman host, which went before the battle to skirmish."—*P. Holland: Livy*, p. 64.

3. A detachment of men selected for some service of uncommon danger, as the storming of a breach, &c., the hope of whose safe return is a forlorn one.

4. A shape or mould; that by which things are fashioned or arranged; a pattern, a model.

* 5. A picture, a model, a likeness.

"That thou no *form* of thee hast left behind." *Shakesp.: Sonnet* 9.

6. A formula; an established or prescribed mode or arrangement.

"Hold fast the *form* of sound words, which thou hast heard of me."—*2 Timothy* i. 13.

7. Regularity, method, order, system, arrangement.

"What he spoke, though it lacked *form* a little, Was not like madness." *Shakesp.: Hamlet*, iii. 1.

8. Beauty; elegance of appearance or figure; comeliness.

"He hath no *form* nor comeliness."—*Isaiah* liii. 2.

9. External appearance without the essential qualities; empty show.

"Dwellers on *form* and favour." *Shakesp.: Sonnet* 125.

10. Ceremony; external rites; established practice or mode: as, the *form* of consecration of bishops.

"Nor are constant *forms* of prayer more likely to flat and hinder the spirit of prayer and devotion, than unpremeditated and confused variety to distract and lose it."—*King Charles: Eikon Basilike.*

* 11. An outline or plan.

"The *form* of my intent."—*Shakesp.: Twelfth Night*, i. 2.

* 12. Manner of behaving; deportment.

"Can no way change you to a milder *form!*" *Shakesp.: Two Gentlemen of Verona*, v. 4.

* 13. A formal cause; that which gives essence.

19. A state of high condition and fitness for any competion or contest, as a race.

20. Powers or capabilities displayed in a contest or competition.

"If it be supposed that two three-year-olds, carrying the same weight, could run a mile and a-half, and come in abreast, it is said that the *form* of one is equal to that of the other."—*Walsh: The Horse*, ch. vi.

21. A state or condition of being; a mode of acting or manifestation to the senses or intellect: as, Water assumes the *form* of ice.

II. *Technically:*

1. *Bot.:* The shape of a body itself, as distinguished from the figure made by its outline; the nature of its apex, that of its divisions, &c.

2. *Cook.:* A shape or mould for jellies.

3. *Foundry:* A mould.

4. *Math.:* The mode of algebraic expression. Two expressions are said to be of the same form, when they indicate the same relation between the quantities which enter them.

5. *Metaphysics:*

(1) *Objectively:*

(*a*) The assemblage of qualities which make a body, a substance, or anything be what it is. Whatever is accidental or adventitious in the individual examined or specimen of the substance examined is excluded from examination, and only what is essential taken into account; hence in place of the simple word *form*, the compound one *essential-form* or *substantial-form* is generally employed.

(*b*) The mode in which any object is manifested to the senses, or the intellect. Thus the clouds manifest themselves to the perceptive powers as occupying a certain position, as having a certain shape, and as coloured with certain hues. The forms of immaterial things are called categories.

(2) *Subjectively:* The idea or concept which the mind forms of an object as distinguished from the object itself. According to the philosophy of Kant, it was the province of the sensitive faculty to communicate to the mind the matter of a notion, and that of the understanding to give it form.

6. *Printing* (*Generally as* forme):

(1) A body of type, composed and made ready for printing.

(2) A stereotype in the like condition of readiness. The one containing the first page is the outer forme. The forme for the opposite side of the sheet is the inner forme.

7. *Zool.:* A distinction sometimes used for those minute variations which are not constant enough to be called varieties.

¶ (1) Crabb thus discriminates between *form*, *figure*, and *conformation*: "*Form* is the generic term; *figure* and *conformation* are special terms. The *form* is the work either of nature or art; it results from the arrangement of the parts; the *figure* is the work of design; it includes the general contour or outline; the *conformation* includes such a disposition of the parts of a body as is adapted for performing certain functions. *Form* is the property of every substance; and the artificial *form* approaches nearest to perfection, as it is most natural; the *figure* is the fruit of the imagination; it is the representation of the actual *form* that belongs to things; it is more or less just as it approaches to the *form* of the thing itself; the *conformation* is said only with regard to animal bodies. *Form* and *figure* are used in a moral application, although *conformation* is not."

(2) He thus discriminates between *form*, *ceremony*, *rite* and *observance*: "*Form* is the most general in its sense and application; *ceremony*, *rite*, and *observance* are particular kinds of *form*, suited to particular occasions. *Form*, in its distinct application, respects all modes of acting and speaking, that is adopted by society at large, in every transaction of life; *ceremony* respects those *forms* of outward behaviour which are made the expressions of respect and deference; *rite* and *observance* are applied to national *ceremonies* in matters of religion." (*Crabb: Eng. Synon.*)

form, * **form-en, form-yn,** * **fourme,** *v.t.* & *i.* [Fr. *former*, from Lat. *formo*, from *forma* = form, shape; Sp. & Port. *formar*; Ital. *formare*; Dut. *vormen*; Icel. & Sw. *forma*; Dan. *forme*; Ger. *formen*.]

A. *Transitive:*

I. *Ordinary Language:*

1. To make, shape, or mould out of materials; to give form or shape to.

"And the Lord God *formed* man out of the dust of the ground."—*Genesis* ii. 7.

2. To arrange in any particular manner; as, To *form* troops.

"Other troops should not be *formed* behind them."—*Macdougall: Modern Warfare*, ch. vi.

3. To give existence to; to create.

"Creature in whom excelled
Whatever can to sight or thought be *formed*,
Holy, divine, good, amiable, or sweet."
Milton: P. L., ix. 897.

4. To model or mould according to a pattern.

"From him the orator *formed* a style."—*Goldsmith: On Polite Learning*, ch. ii.

5. To mould or form by instruction or discipline; to train.

"'Tis education *forms* the common mind." *Pope: Moral Essays*, i. 149.

6. To contrive; to devise; to imagine.

"The defeat of the design is the routing of opinions *formed* for promoting it."—*More: Decay of Piety.*

7. To arrange; to adjust; to settle; to continue.

"Our differences with the Romanists are thus *formed* into an interest."—*More: Decay of Piety.*

8. To be an element or component part of; to go to make up; to compose.

"The diplomatick politicians of whom I speak and who *formed* by far the majority in that class."—*Burke: Regicide Peace*, lett. ii.

* 9. To seat or settle in a form.

"The melancholy hare is *formed* in brakes and briers." *Drayton: Poly-Olbion*, s. 2.

II. *Gram.:* To make, coin, or construct a word by derivation, or by the means of affixes or prefixes.

* **B.** *Intransitive:*

1. To take or assume a particular form or shape.

2. To squat down as a hare.

¶ (1) Crabb thus discriminates between to *form*, to *fashion*, to *mould*, and to *shape*: "To

form is to put into a *form*, which is the generic term : to *fashion* is to put into a particular or distinct *form* : to *mould* is to put into a set *form* : to *shape* is to *form* simply as it respects the exterior. As everything receives a *form* when it receives existence, to *form* conveys the idea of producing. When we wish to represent a thing as *formed* in any distinct or remarkable way, we may speak of it as *fashioned*."

(2) He thus discriminates between to *form*, to *compose*, and to *constitute*: "*Form* is a generic and indefinite term. To *compose* and *constitute* are modes of forming. These words may be employed either to designate modes of action or to characterize things. Things may be *formed* either by persons or things ; they are *composed* and *constituted* only by conscious agents." (*Crabb : Eng. Synon.*)

(3) For the difference between to *form* and to *make*, see MAKE.

-form, *suff.* [Lat. *forma* = form.] A suffix largely used to denote in the form or shape of, like, resembling : as, ovi*form* = in the form of or like an egg ; ensi*form* = in the shape of or like a sword, &c.

"That hys narrative may be *formable*."—*Webbe: English Poetrie*, p. 90

form'-al, *a.* [Lat. *formalis*, from *forma* = form, shape ; Fr. *formel* ; Sp. & Port. *formal* ; Ital. *formale*.]

I. *Ordinary Language:*

1. In a set form ; according to form.

"*Formal*, geometric shapes she draws."
Mason : Dufresnoy ; Art of Painting.

2. Given to the observance of forms or ceremonies ; ceremonious ; precise ; exact ; punctilious.

"Are you so *formal* ?"—*Shakesp. : Taming of the Shrew*, iii. 1.

3. Done according to established rules or forms ; regular ; done in due form : as, a *formal* reception of an ambassador by a king.

*4. Acting according to established rule ; regular ; methodical.

"The *formal* stars do travel so."
Waller : To the Mutable Fair, 21.

5. External ; having outward appearance only, without the essence.

"Of *formal* duty make no more thy boast ;
Thou disobey 'st where it concerns me most."
Dryden : Aurungzebe, i. 1.

6. Depending upon customary forms ; conventional.

"Still in constraint your suffering sex remains,
Or bound in *formal* or in real chains."
Pope : Epistle iv. 42.

7. Having the power of making anything what it is ; formative ; constituent ; essential. [CAUSE, *s.*, III. 5.]

"The *formal* essence and nature of man, is wholly owing to the power of God."—*Bentley : Boyle Lectures.*

8. Retaining the proper and essential characteristics ; regular, orderly, proper.

"Thou shouldst come like a fury covered with snakes,
Not like a *formal* man."
Shakesp. : Antony & Cleopatra, ii. 5.

II. *Metaph.:* Connected with conditions rather than causes.

¶ Crabb thus discriminates between *formal* and *ceremonious*: "*Formal* and *ceremonious* are either taken in an indifferent sense with respect to what contains *form* and *ceremony*, or in a bad sense, as expressing the excess of *form* and *ceremony*. A person expects to have a *formal* dismissal before he considers himself as dismissed ; people of fashion pay each other *ceremonious* visits, by way of keeping up a distant intercourse. . . *Formal*, in the bad sense, is opposed to easy ; *ceremonious* to the cordial. A *formal* carriage prevents a person from indulging himself in the innocent familiarities of friendly intercourse ; a *ceremonious* carriage puts a stop to all hospitality and kindness." (*Crabb : Eng. Synon.*)

form-ăl'-dĕ-hȳde, *s.* [Eng. *form(ic)*, and *aldehyde* (q.v.).]

Chem.: HCO·H, formic aldehyde, methyl aldehyde. Obtained when a current of air, charged with the vapour of methyl alcohol, is directed on an incandescent spiral of platinum wire. The liquid collected reduces nitrate of silver, forming a mirror ; a small quantity is formed by the action of the silent electric discharge on a mixture of hydrogen and carbon dioxide, $CO_2 + 2H_2 = H{\cdot}CO{\cdot}H + H_2O$.

form'-al-ism, *s.* [Eng. *formal* ; *-ism*.] The quality of being formal, or acting according to forms ; formality.

form'-al-ĭst, *s.* [Eng. *formal* ; *-ist* ; Fr. *formaliste*.]

1. One who practises external ceremony ; one who observes strictly external forms, especially in religion ; a stickler for forms.

"Always upright and honourable, but a bigot and a *formalist*."—*Macaulay : Hist. Eng.*, ch. xv.

2. An advocate or supporter of form in disputations.

for-măl'-ĭ-tȳ, *s.* [Fr. *formalité*, from Lat. *formalis*, from *forma* = form.]

I. *Ordinary Language:*

1. External appearance.

"To fix on God the *formality* of faculties or affections, is the imposture of our fancies."—*Glanvill : Scepsis Scientifica.*

2. The condition or quality of being formal.

3. Established order, method, mode, or rule of proceeding.

"As our revolution was a vindication of ancient rights, so it was conducted with strict attention to ancient *formalities*."—*Macaulay : Hist. Eng.*, ch. x.

4. Customary or conventional mode or rules of behaviour, dress, &c. ; conventionality ; ceremonial.

"This to prevent, I set orations by,
For passion seldom loves *formalitie*."
Browne : Britannia's Pastorals, bk. ii., s. 5.

*5. Form without substance.

"The attire, which the minister of God is by order to use at times of divine service, is but a matter of mere *formality*."—*Hooker.*

6. Essence ; that which constitutes a thing, as distinguished from its accidents.

"According to the rule of the casuists, the *formality* of prodigality is inordinateness of our laying out, or misbestowing on what we should not."—*Whitlock : Zootomia*, p. 497.

*7. (*Pl.*): Special dress, as academical, ecclesiastical, &c.

"Every deane besides had *formalities*."—*Life of A. Wood*, Feb. 12, 1558-9.

*II. *Scholastic Philos.:* The manner in which a thing is conceived or constituted by an act of human thinking ; the result of such an act : as, Animality and rationality are *formalities*.

"For this reason the prince long abstained from *formally* expressing his sentiments."—*Macaulay : Hist. Eng.*, ch. vii.

2. With attention to form and ceremony ; ceremoniously, stiffly, punctiliously.

"To be stiff and *formally* reserved, as if the company did not deserve our familiarity, is a downright challenge of homage."—*Collier : On Pride.*

3. With due or proper rites or forms ; according to precedent ; regularly.

"*Formally*, according to our law,
Depose him." *Shakesp. : Richard II.*, i. 3.

*4. Openly, plainly.

"You and your followers do stand *formally* divided against the authorised guides of the church, and the rest of the people."—*Hooker : Eccles. Polity.*

*5. Essentially.

"The heathens and the Christians may agree in material acts of charity ; but that which *formally* makes this a Christian grace, is the spring from which it flows."—*Smalridge.*

form-ăm'-ĭde, *s.* [Eng. *form(ic)*, and *amide* (q.v.).]

Chem.: $H{\cdot}CO{\cdot}NH_2$. The amide of formic acid, obtained by the dry distillation of formate of ammonium, or by heating two parts of dry ammonium formate with one part of urea to 140°, till no more ammonium carbonate is given off. It is a liquid which distils in a vacuum at 150° at ordinary pressure, at 195° with partial decomposition : when quickly heated, it is decomposed into CO and NH_3.

forma pauperis, *phr.* [Lat. = the form or character of a poor man.]

Law: [IN FORMA PAUPERIS].

form'-āte, *s.* [Eng. *form(ic)* ; *-ate* (*Chem.*) (q.v.).]

Chem.: A salt of formic acid.

¶ The principal formates are : *formate of ammonium*, $H{\cdot}CO{\cdot}OH{\cdot}NH_3$, a soluble deliquescent salt, crystallizing in needles ; it has a pungent taste ; when heated to 180° it is decomposed into hydrocyanic acid, HCN, and water ; the *formates of barium, strontium*, and *calcium*, which are soluble in water, but insoluble in alcohol and ether ; the *formates of potassium*, $H{\cdot}CO{\cdot}O{\cdot}K$, and sodium, $H{\cdot}CO{\cdot}ONa$, which crystallize out of formic acid, with another molecule of acid, as $(H{\cdot}CO{\cdot}OK + H{\cdot}CO{\cdot}OH)$; the *formate of lead* $(H{\cdot}CO{\cdot}O)_2\,Pb''$ crystallizes in shining needles, soluble in thirty-six parts of cold water.

for-mā'-tion, *s.* [Fr., from Lat. *formatio*, from *formatus*, pa. par. of *formo* = to form, shape ; Sp. *formacion* ; Ital. *formazione*.]

I. *Ordinary Language:*

1. The act of forming, creating, or bringing into existence ; a creation, generation or production.

"Nature continues in this labour, until a perfect shape be introduced : and this is called *formation*."—*Howell : Letters*, bk. i., lett. 20.

2. The state of being formed, created or brought into existence.

3. The manner in which anything is formed ; conformation, form, figure.

II. *Technically:*

1. *Geol.:* A group, whether of alluvial deposits, sedimentary strata, or igneous rocks, referred to a common origin or period. Thus there are stratified and unstratified, freshwater and marine, aqueous and volcanic, with many other formations. (*Lyell.*)

2. *Mil.:* An arrangement of troops, as in a square, column, &c.

3. *Philol.:* The forming of a word, as by derivation, or the uses of affixes or prefixes.

"Accent is related to music or song ; as appears in the *formation* of the Latin word, from *ad* and *cantus*."—*Beattie : Moral Science*, pt. i., ch. i., § 11.

form'-a-tĭve, *a.* & *s.* [Lat. *formatif* ; Sp. & Ital. *formativo*, from Lat. *formatus*, pa. par. of *formo*.]

A. *As adjective:*

1. *Ord. Lang.:* Having the power or quality of giving form ; plastic.

"You feel the desolateness of the *formative* thought as well as the root of its bitterness."—*Brit. Quarterly Review*, vol. lvii., p. 408.

2. *Philol.:* Serving to form ; derivate ; not radical : as, a *formative* termination.

B. *As substantive:*

Philology:

1. That which serves to form, and is no part of the root ; as the suff. *-en* in such words as bright*en*, wood*en*, &c.

2. A word formed in accordance with some rule or usage, as from a root.

formative-arts, *s. pl.*

Art: Those arts which, independently of external wants and aims, yet, on the other hand, bound to the imitation of nature, represent life by means of the forms naturally connected. The general style of the formative arts is the result of a principle of selection which necessarily limits imitation. Such general style consists, therefore, in qualities which distinguish those arts from nature. The specific style of any one of the arts consists in the effective use of those particular means of imitation which distinguish it from the other arts. Style is complete when the spectator is not reminded of any want which another art or which nature could supply. (*Fairholt.*)

formative-tissue, *s.*

Bot.: A tissue capable of forming new cells. It is called also generating tissue and Meristem (q.v.). It is distinguished from permanent tissue.

***for-maylle,** *s.* [FORMEL.]

for-mē (1), *a.* [Fr. pa. par. of *former* = to form, to shape.]

Her.: A term applied to a cross having the arms expanding towards the ends and flat at the outer edges; also called *patée* or *pattée.*

***forme** (2), **furme,** *a.* [A.S. *forma;* O. Sax. *formo;* O. Fris. *forma.*] First. [FOREMOST.]

"The *forme* man the com in this middeneard that was Adam."—*O. Eng. Homilies,* ii. 151.

***forme-fader, forme-father,** *s.* An ancestor.

***forme,** *s.* [FORM, *s.*]

formed, *pa. par. & a.* [FORM, *v.*]

A. *As pa. par.:* (See the verb).

B. *As adjective:*

1. Shaped or moulded into form; created, produced, brought into existence.

2. Arranged; as stars into a constellation.

***for'-mĕ-dŏn,** *s.* [Lat. *forma doni* = the form of the gift.]

Law: A writ of right, which lay for him who had right to lands or tenements by virtue of an entail. It was abolished by the statute 3 and 4 William IV., c. 27.

***for-mel, *for-maylle, *for-mell,** *s.* [Etymol. doubtful; cf. O. Fr. *forme* = a hawk or falcon.] Properly a female hawk, but also applied to the females of other birds.

"Who loveth best this gentil *formel* here."
Chaucer: Assembly of Foules, 534.

***for-melt,** *v.t.* [A.S. *formeltan.*] To melt away.

"He hit *formelteth* to watere."
O. Eng. Homilies, ii. 151.

***for'-mēne,** *s.* [Eng. *form(ic); -ene* (*Chem.*) (q.v.).]

Chem.: A name formerly given to Methane CH_4.

form'-ĕr, *for-mere, *a. & s.* [Formed from A.S. *forma* = early by the addition of *-er.* It is a word of false formation, due to the mistaken idea that *formest* (*foremost*), was a simple and not a double superlative form.] [FOREMOST.]

A. *As adjective:*

1. Before or preceding something else in time.

"Daniel saw this vision by the floud whose waters lyke as the later waues thruste forth the *former* sourges."—*Joye: Exposicion of Daniel,* ch. viii.

2. Near the beginning; early; preceding.

3. Earlier, as of two things mentioned at the same time; first mentioned.

"The most obvious division of society is into rich and poor; and it is no less obvious that the number of the *former* bear a great disproportion to those of the latter."—*Burke: A Vindication of Natural Society.*

4. Past; gone by; ancient; as, in *former* times.

"Inquire, I pray thee of the *former* age."—*Job* viii. 8.

* **B.** *As subst.:* A predecessor.

"To use the terms of our *formers.*"—*W. Patten: Exped. to Scotland,* 1547.

***former-ward, *former-warde,** *s.* A vanguard; an advanced guard.

form'-ĕr, *form-our, *formyour, *s.* [Eng. *form; -er.*]

1. One who or that which forms; a creator.

"Fader and *formour* of al that euere was maked."
P. Plowman, 5,294.

2. *Specif.:* A shape around which an article is moulded, woven, wrapped, pasted, or otherwise constructed. A templet, pattern, or gauge by which an article is shaped, as pottery, or an object in the lathe. A cutter by which patterns, blanks, wads, or pieces are cut from sheets for various purposes.

for-mĕr-ĕt', *s.* [Fr.]

Arch.: The arch rib, which, in Gothic groining, lies next the wall, and is consequently less than the other ribs which divide the vaulting.

form'-ĕr-lȳ, *for-mer-lie, *adv.* [Eng. *former; -ly.*]

*1. First; first of all; beforehand.

"Prevented him before his stroke could light,
And on the helmet smote him *formerlie.*"
Spenser: F. Q., VI. i. 38.

2. In former times; in times past; of old; anciently.

"It was enacted that they should pay no more than had been *formerly* wont to be paid."—*Burnet: Hist. of the Reformation* (an. 1531).

3. Previously, heretofore.

"And her faire lockes which *formerly* were bound
Up in one knott, she low adowne did lose."
Spenser: F. Q., II. xii. 67.

¶ Crabb thus discriminates between *formerly, in times past, in days of yore,* and *anciently:* "*Formerly* supposes a less remote period than *in times past,* and that less remote than *in days of yore* and *anciently.* The two first may be said of what happens within the age of man; the last two are extended to many generations and ages. Any individual may use the word *formerly* with regard to himself: thus, we enjoyed our health better *formerly* than now. An old man may speak of *times past,* as when he says he does not enjoy himself as he did *in times past. Old times, days of yore,* and *anciently,* are more applicable to nations than to individuals; and all these express different degrees of remoteness." (*Crabb: Eng. Synon.*)

***for-mest,** *a.* [FOREMOST.]

***form'-fŭl,** *a.* [Eng. *form; -ful*(*l*).] Ready or quick to form; creative, imaginative, fanciful.

"As fleets the vision o'er the *formful* brain."
Thomson: Summer, 1,632.

form'-ĭc, *a.* [Lat. *form* (*ica*) = an ant; *-ic.*] Pertaining to or produced by ants.

"We should borrow from them *formic* laws or apiarian policy."—*Southey: The Doctor,* ch. xcvi.

formic acid, *s.*

Chem.: $HCHO_2$ or $H{\cdot}CO{\cdot}OH$. A monobasic fatty acid, which derives its name from the circumstance that it was first obtained by distilling ants. It occurs in the animal and vegetable kingdoms, especially in the red ant, *Formica rufa.* When an ant walks over moistened blue litmus it turns it red. It exists also in certain caterpillars, in several secretions of the human body, as in blood, in urine, in the flesh-juice and in perspiration. It also occurs in the juice of the stinging-nettle, and in commercial oil of turpentine that has been exposed to the air, and in certain mineral springs. Formic acid can be obtained by the oxidation of methyl alcohol $CH_3{\cdot}OH$, and by boiling hydrocyanic acid HCN with hydrochloric acid. Formic acid is obtained by distilling sugar, gum, and starch with strong sulphuric acid, but it is best prepared by heating equal quantities of oxalic acid, $H_2C_2O_4$, and glycerine, $C_3H_5(OH)_3$; in a retort on a water-bath; it gives off CO_2 and dilute formic acid distils over. When no more gas is given off, more oxalic acid is added; it is again heated, and a more concentrated formic acid comes over. In this reaction a mono-formic ether of glycerine is first formed. Thus—

$$C_3H_5\left\{\begin{matrix}OH\\OH\\OH\end{matrix}\right. + H_2C_2O_4 = C_3H_5\left\}\begin{matrix}OH\\OH\\O{\cdot}COH\end{matrix}\right. + CO_2 + H_2O$$

$$\& \ C_3H_5\left\{\begin{matrix}OH\\OH\\O{\cdot}COH\end{matrix}\right. + H_2O = C_3H_5(OH)_2 + H{\cdot}CO{\cdot}OH.$$

The anhydrous acid is obtained by heating to 100°C lead formate $(H{\cdot}CO{\cdot}O)_2Pb''$ in a stream of sulphuretted hydrogen gas. Pure formic acid is a colourless, transparent liquid, which slightly fumes in the air. It has a pungent, sour taste, and corrodes the skin, forming painful ulcers. Formic acid solidifies at −1° and boils at 99°. It mixes with water and with alcohol in all proportions; its vapour is inflammable, and burns with a blue flame. Formic acid, heated with concentrated sulphuric acid, is decomposed into carbon monoxide, CO, and water. Formic acid reduces salts of gold, silver, and mercury, being converted into carbon dioxide and water. By the action of chlorine, formic acid is converted into hydrochloric acid and CO_2. All salts of formic acid are soluble in water; their aqueous solutions are turned red by the addition of ferric chloride.

formic-ethers, *s. pl.*

Chem.: Chemical substances in which the basic hydrogen of formic acid has been replaced by an alcohol radical.

for-mĭ'-cą, *s.* [Lat. = an ant.]

1. *Entom.:* The typical genus of the family Formicidæ (q.v.). It has the foot-stalk of the abdomen composed of a single joint; the mandibles are triangular, and denticulated at the edge. The females are destitute of a sting. There are about twelve British species. Of these *Formica sanguinea* makes its nest in wood, and is a slave-holder, carrying off the young of other species such as those of *F. cunicularia* and *F. fusca.* Of the foreign species, *F. saccharivora* makes its nest at the foot of sugar canes, so loosening the land that they are blown down by gales. *F. indefessa,* an Indian species, is a great devourer of sweets. [ANT.]

2. *Falconry:* A disease in a hawk's bill.

for'-mĭc-ănt, *a.* [Lat. *formica* = an ant.]

Pathol.: Pulsus formicans—an epithet given to—the pulse when extremely small, scarcely perceptible, unequal, and communicating a sensation like that of the motion of an ant felt through a thin texture. (*Dunglison.*)

for-mĭ-căr-ĭ'-ĭ-dæ, *s. pl.* [Mod. Lat. *formicari(us),* and Lat. fem. pl. adj. suff. *-idæ.*]

Ornith.: Ant-thrushes: a family of birds by some called Formicarinæ, allowed only the position of a subfamily of Turdidæ (Thrushes). They have the wings and tail much shorter than those of the true thrushes, the tip of their bill also is often slightly hooked. They for the most part inhabit the tropical regions of both hemispheres, frequenting forests and thickets, flying badly from the shortness of their wings and consequently feeling most at home on the ground, where they devour ants, coleoptera, &c. The typical genus Formicarius is of sober tints; Pitta, on the contrary, is of a brilliant azure blue. The Dipper or Water Ouzel (*Cinclus aquaticus*), is an aberrant form of the family or sub-family. (*Dallas, &c.*)

for-mĭ-căr-ĭ'-næ, *s. pl.* [Mod. Lat. *formicar(ius),* and Lat. fem. pl. adj. suff. *-inæ.*]

Ornith.: A sub-family of Turdidæ, by some elevated into a family, Formicariidæ (q.v.).

for-mĭ-căr'-ĭ-ūs, *s.* [Lat. *formic(a),* and mas. sing. adj. suff. *-arius.*]

Ornith.: The typical genus of the sub-family Formicarinæ or the family Formicariidæ (q.v.).

for'-mĭ-cāte, *a.* [Lat. *formic(a)* = an ant; *-ate.*] Resembling an ant; pertaining to or in any way connected with the genus Formica (q.v.).

for-mĭ-cā'-tion, *s.* [Lat., from *formico* = to creep or crawl like ants.]

Pathol.: An irritation of the skin, resembling the crawling of ants, produced by pustules.

for-mĭç'-ĭc, *a.* [Lat. *formic(a)* = an ant; *-ic.*]

Chem.: The same as FORMIC (q.v.).

for-mĭç'-ĭ-dæ, *s. pl.* [Lat. *formic(a)* = an ant, and fem. pl. adj. suff. *-idæ.*]

Entom.: A genus of Aculeate Hymenoptera, tribe or subtribe Heterogyna. The abortive females are wingless, the basal joint of the antennæ in the females and neuters is long and elbowed; the upper lip of the neuters large, horny, and perpendicular, the first or second joint of the abdomen knotted. In many species the females and neuters have stings. They are generally social insects living in communities, consisting of males, females, and neuters. The chief genera are Formica, Polyergus, Poneria, Myrmica, and Atta. Formica and Myrmica have representatives in Britain.

for-mĭ-çĭ-nąs, *s.* [Lat. *formicinus* = of or like ants.]

Entom.: A genus of Formicidæ. *Formicina rufa* is the Horse ant. It forms large nests of dry leaves and sticks, here and abroad, in woods. Onisci frequent the nests, and Lomechusa and Pella, two species of Staphylini, are found there also as parasites. (*Shuckard.*)

***for-mĭd-ą-bĭl'-ĭ-tȳ,** *s.* [Eng. *formidable; -ity.*] The quality of being formidable; formidableness.

"Who reduces their *formidability* by being sent to raise two clans."—*Walpole: To Mann,* ii. 98.

for'-mĭd-ą-ble, *a.* [Fr., from Lat. *formidabilis,* from *formido* (v.) = to fear, dread, (*s.*), fear, dread.] Causing or calculated to cause fear or dread; terrible, dreadful, fearful, deterrent.

"But it was well known that he could be as useful a friend and as *formidable* an enemy as any member of the cabinet."—*Macaulay: Hist. Eng.,* ch. xiii.

¶ Crabb thus discriminates between *formidable, dreadful, terrible,* and *shocking:* "*Formidable* is applied to that which is apt to excite fear; *dreadful* is applied to what is calculated to excite dread; *terrible* is applied to that which excites terror; *shocking,* from

shake, is applied to that which violently shakes or agitates. The *formidable* acts neither suddenly nor violently; the *dreadful* may act violently, but not suddenly; thus the appearance of an army may be *formidable*; that of a field of battle is *dreadful*. The *terrible* and *shocking* act both suddenly and violently; but the former acts both on the senses and the imagination, the latter on the moral feelings." (*Crabb: Eng. Synon.*)

for´-mĭd-a-ble-nĕss, *s.* [Eng. *formidable*; *-ness*.] The quality of being formidable or to be dreaded.

"Who could not be deterred by the *formidableness* of destructive flames."—*Boyle: Works*, ii. 6.

for´-mĭd-a-blȳ, *adv.* [Eng. *formidab(le)*; *-ly*.] In a formidable manner.

"The British cannon *formidably* roars." *Dryden: Threnodia Augustalis*, 512.

* **for-mĭd´-ō-lose,** *a.* [Lat. *formidolosus*, from *formido*=dread, fear.] Dreading greatly; very much afraid.

form´-ĭng, *pr. par., a., & s.* [FORM, *v.*]

A. & **B.** *As pr. par. & particip. adj.*: (See the verb).

C. *As substantive*:

1. *Ord. Lang.*: The act or process of giving form, shape, or figure to; creation.

2. *Ship-build.*: Shaping exactly the converted (partially shaped) timbers, so as to give them the required figure. This consists in:—(*a*) Siding; giving them the correct breadth; (*b*) Moulding: giving the correct outline and depth; (*c*) Bevelling: giving the faying surface the proper shape to meet the planking or iron skin.

forming-cylinder, *s.*

Paper-making: That cylinder in a paper-making machine on which the film of pulp is gathered, and which delivers it as a soft and weak web to the machines for hardening and drying.

* **form´-lĕss,** *a.* [Eng. *form*; *-less*.] Wanting form or shape; shapeless; without regularity of form.

"Like that great Spirit, who, with plastic sweep,
Moved on the darkness of the *formless* deep."
Coleridge: To Rev. W. L. Bowles.

* **form´-lĕss-nĕss,** *s.* [Eng. *formless*; *-ness*.] The quality or state of being formless; shapelessness.

for-mō-mĕth´-ȳ-lăl, *s.* [METHYLAL.]

for-mō-nĭt´-rĭl, *s.* [Eng. *form(ic)*, *o* connective, and *nitril* (q.v.).]

Chem.: H·CN. A name sometimes given to hydrocyanic acid, as it may be regarded as the nitril of formic acid.

* **for-mŏs´-ĭ-tȳ,** * **for-mos-i-tie,** *s.* [Lat. *formositas*, from *formosus* = beautiful, handsome, from *forma* = shape, beauty.] Beauty, grace, gracefulness.

"Into your excellent *formositie*."—*Sidney: Wanstead Play*, p. 619.

* **form´-oŭs,** *a.* [Lat. *formosus*, from *forma*.] Beautiful, graceful.

"O pulchrior sole in beautie lucident
Of all famine most *formous* flour."
Balade, The Nine Ladies Worthie.

for´-mu-la (pl. **for´-mu-læ** or **for´-mu-las**), * **for´-mūle** (1) *s.* [Lat. *formula*, dimin. of *forma* = a form; Fr. *formule*.]

I. *Ord. Lang.*: A prescribed set or special form of words in which anything is stated or declared.

"I think I have seen all of them [papers], except the *formula* of association."—*Burke: Letter to Sir H. Langrishe.*

II. *Technically*:

1. *Chem.*: An expression by means of symbols, specially letters and numbers, of the chemical elements contained in a compound. [EMPIRICAL FORMULÆ, GRAPHIC FORMULÆ, RATIONAL FORMULÆ.]

2. *Eccles.*: A formal enunciation or declaration of faith or doctrine.

3. *Math.*: The expression of a general rule or principle in algebraic symbols. For example, the equation—

$$(a+b)(a-b)=a^2-b^2$$

is a formula, being the algebraic expression of the fact that the sum of two quantities multiplied by their difference is equal to the difference of their squares. If a rule or principle is translated into algebraic expressions, the result is a formula; conversely, if a formula is translated into ordinary language, the result is a rule or principle.

4. *Med.*: A prescription.

¶ (1) *Dental formula*: [DENTAL FORMULA].

(2) *Formula of Concord*:

Ch. Hist.: A confession of faith upon the points on which the Lutherans differed from the Calvinists, especially in connection with the Eucharist. The issue of such a document was suggested by Augustus, Elector of Saxony, who employed James Andreä to ascertain opinions on the subject, and draw it out. His chief assistants were first and last Martin Chemnitz, Nicholas Selnecker, Andrew Musculus, Christopher Cörner, and David Chytæus. The formula was published in 1580, all clergymen and schoolmasters being required by the Elector to subscribe to it. It endorsed the opinions of Luther, and widened the breach with the Swiss and other "reformed" churches. (*Mosheim*, &c.)

(3) *Formula Consensus*:

Ch. Hist.: A formula drawn up in 1675, by John Henry Heidegger, a celebrated divine, of Zurich, at the instance of his clerical brethren, to preserve the Calvinistic doctrine from the slight modifications of it introduced by the French divine Amyraut, and others. It was annexed by the magistrates to the common Helvetic formulas of religion. Its effect was found adverse rather than favourable to peace. It was abolished in the canton of Berne and the republic of Geneva in 1686, and ultimately became incapable of enforcement anywhere. (*Mosheim*.)

for´-mu-læ, *s. pl.* [FORMULA.]

for-mu-lā´-ĭc, *a.* [Lat. *formula*, and Eng., &c. suff. *-ic*.]

Math.: Presenting or containing a formula; relating to a formula.

formulaic equations, *s. pl.*

Math.: Equations one member of which is obviously the same in value as the other, though the two are for the moment differently expressed. Thus, $(x-y)(x+y)=x^2-y^2$ is a formulaic equation for $(x-y)\times(x+y)=x^2-y^2$. [FORMULA, II. 3; IDENTITY.]

* **for´-mu-lar,** *a.* [Fr. *formulaire*, from Lat. *formula*.] Of or pertaining to a formula or formulæ; formulary.

* **for-mu-la-rĭs´-tĭc,** *a.* [Eng. *formulariz(e)*; *-tic*.] Pertaining to or exhibiting formularization (q.v.).

* **for-mu-lar-ĭ-zā´-tion,** *s.* [Eng. *formulariz(e)*; *-ation*.]

1. The act of formularizing or formulating.

2. A formularized or formulated statement or exhibition.

* **for´-mu-lar-īze,** *v.t.* [Eng. *formular*; *-ize*.] To formulate or reduce to a formula; to express or set down in a systematic and clear form.

for´-mu-lar-ȳ, *a. & s.* [Fr. *formulaire*, from Lat. *formula*; Sp. *formulario*.]

A. *As adj.*: According to a set form; stated; prescribed; ritual; formal.

"To have here mended the *formulary* part."—*North: Reflections on Le Clerc*, p. 675.

B. *As substantive*:

1. A book containing stated and prescribed forms; a book of precedents or set models, as of declarations, prayers, &c.

2. A prescribed or set form or model; a formula.

"I believe every one hath some mode and model or *formulary* of his own specially for his private cubicular devotions."—*Howell: Letters*, bk. i., let. 32.

for´-mu-lāte, *v.t.* [Lat. *formula*.] To reduce to or express in a formula; to put or set down in a systematic and comprehensive form; to declare or set forth clearly and distinctly.

"The General Synthesis . . . proceeds to *formulate* in such terms the successive phases of progressing life."—*Herbert Spencer: Psychology* (1870), i., p. viii.

* **form´-ūle** (1), *s.* [Fr.] [FORMULA.]

form´-ūle (2), *s.* [FORMYL.]

* **for-mu-līz-ā´-tion,** *s.* [Eng. *formuliz(e)*; *-ation*.] The act of formulizing or formulating; reducing to a formula.

* **for´-mu-līze,** *v.t.* [Eng. *formul(a)*; *-ize*.] To reduce to or explain in a formula; to formulate.

"To *formulize* and impress the uncertain tenant-right custom with the authority of law was the chief object of the Land Act of 1870."—*F. Dun*, in *Times*, April 14, 1881.

for´-mȳl, form´-ūle (2), *s.* [Eng. *form(ic)*; *-yle* = Gr. ὕλη (*hulē*) = matter.]

Chem.: (H·CO)'. A monad fatty acid radical, contained in formic acid. This name was formerly given to the triad radical (CH)''', which is contained in chloroform, CH'''Cl_3.

* **for-nais,** * **for-nays,** *s.* [FURNACE.]

for-năx, *s.* [Lat. = a furnace.]

Fornax-chemica,

Astron.: (The Chemist's Furnace.) One of Lacaille's Southern Constellations. It is situated immediately below Cetus.

for-nĕnt´, fō´re-a-nĕnt, *prep.* [Eng. *fore*, and *anent*.]

1. Directly opposite to.

2. Concerning.

* **fornicarie,** * **fornycary,** *a.* [Lat. *fornicarius*.] Fornicating, lewd.

"Thes shulen haate the *fornicarie* womman."—*Wycliffe: Apocalypse* xvii. 16.

for´-nĭ-cāte, *v.i.* [Eccles. Lat. *fornicatus*, pa. par. of *fornicor*, from Class. Lat. *fornix* (genit. *fornicis*) = (1) a vault, an arch, (2) a brothel.] To commit fornication; to be lewd; to have unlawful sexual intercourse.

"With whom, lest they should *fornicate* or worse,
A tutor's sent by way of a dry nurse."
Churchill: The Farewell.

for´-nĭ-cāte, for´-nĭ-cāt-ĕd, *a.* [Lat. *fornicatus* = arched, vaulted; *fornix* (genit. *fornicis*) = an arch, a vault.]

1. *Arch.*: Vaulted like an oven or furnace; arched; concave within and convex without.

2. *Bot.*: Arching over, as a *fornicate* leaf.

for-nĭ-cā´-tion (1), *s.* [Lat. *fornicatio* = a vaulting, an arching over.

Arch.: The forming of a vault or arch; an arching. [FORNICATE, *a.*]

for′-tụ-nạte, *for-tu-nat, *a.* [Lat. *fortunatus*, pa. par. of *fortuno* = to make fortunate; *fortuna* = fortune; Ital. *fortunato*; Sp. *fortunado*; Prov. *fortunat.*]

1. Coming or happening by some good luck or favourable chance; bringing or presaging good fortune; auspicious (said of things): as, a *fortunate* occurrence, a *fortunate* stroke.

"The haruspex proclaiming it to be a *fortunate* omen."—*Middleton: Life of Cicero*, vol. i., § 1.

2. Receiving or meeting with good fortune; lucky, successful, prosperous; not liable to miscarriage or misfortune. (Said of persons.)

"I am most *fortunate* thus accidentally to encounter you."—*Shakesp.: Coriolanus*, iv. 5.

¶ (1) Crabb thus discriminates between *fortunate, lucky, prosperous*, and *successful*: "The *fortunate* and *lucky* are both applied to that which happens without the control of man; but the latter, which is a collateral term, describes the capricious goddess Fortune in her most freakish humours, and *fortunate* represents her in her most sober mood: in other words, the *fortunate* is more according to the ordinary course of things; the *lucky* is something sudden, unaccountable, and singular. *Prosperous* and *successful* seem to exclude the idea of what is *fortuitous*, although *prosperity* and *success* are both greatly aided by good *fortune*. *Fortunate* and *lucky* are applied as much to the removal of evil as to the attainment of good; *prosperous* and *successful* are concerned only in what is good, or esteemed as such: we may be *fortunate* in making our escape; we are *prosperous* in the acquirement of wealth. *Fortunate* is employed for single circumstances, *prosperous* only for a train of circumstances. The *fortunate* and *lucky* man can lay no claim to merit, because they preclude the idea of exertion; *prosperous* and *successful* may claim a share of merit proportioned to the exertion." (*Crabb: Eng. Synon.*)

(2) For the difference between *fortunate* and *happy*, see HAPPY.

for′-tụ-nạte-lȳ, *adv.* [Eng. *fortunate; -ly.*] In a fortunate manner; by good fortune or luck; luckily, happily, successfully.

"Bright Eliza ruled Britannia's state,
And boldly wise, and *fortunately* great."

forz-an′-dō, sforz-an′-dō (z as ts), *adv.* [Ital., pa. par. of *forzare* or *sforzare* = to force.]

Music: Lit. forcing. Emphasis or musical accent upon specified notes or passages marked by the signs *sf.* or >.

fŏss, *s.* [Fosse.]

foss-dyke, *s.* The name given to a canal in Lincolnshire constructed by the Romans.

fŏs′-sa (*pl.* fŏs′-sæ), *s.* [Lat.: though used as a noun, *fossa* is really the fem. nom. sing. of *fossus*, pa. par. of *fodio* = to dig; thus *fossa* (terra) = land dug up; hence, a ditch, a fosse, a trench.] A depression, a furrow.

1. *Zool.*: A term applied to certain depressions on the external surface, generally the seat of cutaneous glands, as the lachrymal fossæ in deer and antelopes.

2. *Anatomy*:

(1) *Sing.*: A groove. There are in the ear a fossa of the helix, which is a groove called also *Fossa innominata* or *scaphoidea*, and a fossa of the antihelix, which is a somewhat triangular depression, called also *Fossa triangularis* or *ovalis*. There are also a fossa of the heart, one of the gall-bladder, &c. There are also a canine, a coronoid, a digastric, a digital, and many another fossa. (*Quain*.)

(2) *Pl.*: Grooves. There are nasal fossæ, superior and inferior occipital, &c. (*Quain*.)

fossa ovalis, *s.*

Anat.: A depression marking the place where, before birth, an orifice connected the two auricles of the heart, the passage between the two, however, being obliterated during the first few months of life. (*Todd & Bowman*: *Physiol. Anat.*, ii. 333.)

* **fŏs′-sage (sage as sĭg),** *s.* [Eng. *fosse*; *-age*.]

Old Law: A composition paid in lieu of the duty of cleaning out the fosse or moat surrounding a town.

fŏs′-săn, fŏs′-săne, *s.* [Fr. *fossane*. Remote etym. doubtful. A Madagascar word (?)]

Zool.: A kind of Genet (*Genetta fossa*), found in Madagascar. Pennant calls it the Fossan Weasel. (*Buffon*, *Pennant*, &c.)

fŏsse, fŏss, *s.* [Lat. *fossa*.]

I. *Ord. Lang.*: A ditch, a moat.

"There is, on a high mountain ridge above the farm of Ashestiel, a *fosse* called Wallace's Trench."—*Scott*: *Marmion.* (Note to Introd.)

II. *Technically*:

1. *Anat.*: [Fossa].

2. *Fort.*: A moat or ditch around a fortification, commonly filled with water. The excavation of the fosse contributes materials for the walls of the fort it is designed to protect. An advance fosse is a ditch encircling the glacis or esplanade of a fortification.

of the great military roads which the Romans constructed in England, so called from the ditches on each side.

fŏs′-sĭck, *v.i.* [Etym. doubtful; perhaps connected with *fuss* or *fussy* (q.v.).]

1. To be fussy or troublesome.

2. Amongst the gold-miners of Australia, applied to the buying up of abandoned claims for the purpose of re-working.

3. To search or hunt for anything persistently.

"They are more suited . . . to plodding, *fossicking*, persevering industry, than for hard work."—*Fraser's Magazine*, Oct. 1878, p. 449.

fŏs′-sĭck-ĕr, *s.* [Eng. *fossick*; *-er*.] One who reworks abandoned claims or workings in the gold mines.

fŏs′-sĭl, *a.* & *s.* [Lat. *fossilis* = dug out, dug up, fossil, from *fossus*, pa. par. of *fodio* = to dig; Fr. *fossile*.]

A. *As adjective*:

I. *Literally*:

1. *Gen.*: Pertaining to what is dug up. [B. I. 1.]

"*Fossil*, or rock salt, and sal gemm differ not in nature from each other."—*Woodward*: *Nat. Hist.*

2. *Spec.*: Pertaining to organic remains. [B. I. 2.]

"The upright position of *fossil* trees, both in Europe and America."—*Lyell*: *Princip. of Geol.*, ch. vi.

II. *Fig.*: Antiquated, belonging to a bygone age.

"Language is *fossil* poetry."—*Emerson*: *Essays*; *The Poet.*

B. *As substantive*:

I. *Literally*:

1. *Originally*: Anything dug up.

"*Fossils*, all bodies whatever that are dug out of the earth are by naturalists commonly called by the general name of *fossils*."—*Glossog. Nov.* (1719.)

¶ Johnson (1776) gives no other meaning to the word *fossil* than "that which is dug out of the earth." Prof. Robt. Jamieson, in his mineralogical and geological works, published early in this century, used the word *fossil* in this obsolete sense, often calling minerals fossils.

2. *Now*: Any body, or the traces of the existence of any body, whether animal or vegetable, which has been buried in the earth by natural causes; one of the bodies called organic remains. Even the cast of a fossil shell, that is the impression which it has left on the rock, is deemed a fossil. (Used often in the plural.)

¶ In the early part of the sixteenth century fossils were supposed by some Italians to have been formed in the hills by the action of the stars, a view which, prior to 1579, Leonardo da Vinci combated. Then the hypothesis arose of a plastic force, or, according to Andrea Mattioli, a fatty matter capable of fashioning stones into organic forms. But the hypothesis which held its place longer than any other, and is not yet extinct among the unscientific, is that they were relics of the Mosaic deluge. It is now thoroughly proved that the relics are really those of plants and animals, that they were nearly all of them in existence ages before the Mosaic deluge, that they are not nearly contemporaneous with each other, but differ in age by untold millions of years, that there is at least a progression among them, if not even the evolution of the last from the more antique. There are breaks or gaps in the series of fossiliferous strata, especially one between the palæozoic and the secondary strata, and another between the secondary and the tertiary. Once it was supposed that

there had been in the earth's geological history alternate periods of repose and convulsion; now it is believed that there would be no breaks if all lands were geologically explored, if all strata now submerged were accessible for investigation, and if local causes acting during bygone ages had been less effective in destroying portions of the record. Mr. Darwin shows that it is almost exclusively strata deposited in seas or lakes which at the time were slowly sinking that have been preserved; those formed when land was rising have, as a rule, been washed away. In the older strata, and sometimes in those not so ancient, fossils have been destroyed by metamorphic action, and when any rock is called non-fossiliferous or azoic, the cautious geologist means by the term only that fossils have not been found in it up to the present time. What coins are to the numismatologist and the historian, that fossils are to the palæontologist and the geologist: they enable him to recover forgotten chapters of history. Fossils are, however, more valuable than coins, they cannot any of them be so easily forged, and few of them can be forged at all.

II. *Fig.:* A contemptuous appellation for a person greatly behind the age.

¶ Obvious compounds: *Fossil-animals, fossil-birds, fossil-fishes, fossil-plants,* &c.

fossil-botanist, *s.*

Bot.: A proficient in fossil-botany (q.v.).

fossil-botany, *s.*

Bot.: The department of botanical science that treats of fossil plants; palæobotany.

fossil-copal, *s.*

Min.: The same as COPALINE (q.v.).

*** fossil-cork,** *s.*

Min.: An old name for what was subsequently called mountain cork, a variety of asbestos. Named on account of its lightness, which is such that it floats in water.

*** fossil-farina,** *s.*

Min.: An old name for a soft carbonate of lime.

*** fossil-flax,** *s.*

Min.: A popular name for amianthus, the variety of asbestos which has long flexible fibres.

fossil-flour, *s.* A siliceous, mealy earth, consisting of siliceous shields of infusoria. It is used for fire-proof bricks.

† fossil-paper, *s.*

Min.: A papery-looking sub-variety of asbestos.

† fossil-screws, *s. pl.* A popular name for the casts in the rock left by spiral shells, or for those of encrinites when their impressions are horizontally furrowed.

fossil-wood, *s.*

1. *Palæont.:* Wood found fossil. In many cases the medullary rays in exogens and the ends of ducts in endogens are at least as clearly visible as in recent wood.

2. *Min.:* A popular name for some woody-looking specimens of asbestos.

fŏs-sĭl-ĭf′-ĕr-oŭs, *a.* [Lat. *fossilis* = dug out, fossil; *fero* = to produce, to yield, and suff. *-ous.*] Containing or producing fossils.

¶ Tabular view of the Fossiliferous Strata in the order of their superposition, which is also that of their chronological succession. The lower—*i.e.*, the older ones—are placed first:—

I. PRIMARY OR PALÆOZOIC ROCKS.

1. Laurentian	(1) Lower (2) Upper	4. Devonian or Old Red Sandstone	(7) Lower (8) Middle (9) Upper
2. Cambrian	(3) Lower (4) Upper	5. Carboniferous	(10) Lower (11) Upper
3. Silurian	(5) Lower (6) Upper	6. Permian	(12) Permian

II. SECONDARY OR MESOZOIC ROCKS.

7. Trias	(13) Lower (14) Middle (15) Upper	10. Cretaceous	(20) Lower Cretaceous or Neocomian (21) Upper
8. Lias	(16) Lias		
9. Oolite	(17) Lower (18) Middle (19) Upper		

III. TERTIARY OR CAINOZOIC ROCKS.

11. Eocene	(22) Lower (23) Middle (24) Upper	12. Miocene	(25) Lower (26) Upper
		13. Pliocene	(27) Older (28) Newer

IV. POST-TERTIARY ROCKS.

14. Post-Tertiary (29) Post-Pliocene (30) Recent.

The foregoing table is from Sir Charles Lyell's *Student's Elements of Geology* (1871); but with the order reversed. For subdivisions of the several formations, see Laurentian, Silurian, &c. &c. Dr. Hicks, F.G.S., has added a Dimetian and an Arvonian formation, both he believes Precambrian. Their exact place in the system, and even their existence, are subjects of controversy. (*Quar. Jour. Geol. Soc.*, xxxix. (1883), 261-333.)

fŏs-sĭl-ĭ-fĭ-cā′-tion, *s.* [Eng. *fossilify*; *c* connective, and suff. *-ation.*]

fŏs-sĭl′-ĭ-fȳ, *v.t.* & *i.* [Lat. *fossilis* = dug out, fossil, and *fio* (pass. of *facio*)=to become.]

A. *Trans.:* To render fossil, to convert into a fossil, to fossilize.

B. *Intrans.:* To become fossil; to be converted into a fossil.

fŏs′-sĭl-ĭsm, *s.* [Eng. *fossil*; *-ism.*] The science of fossils; that branch of palæontology which treats of fossil substances.

fŏs′-sĭl-ĭst, *s.* [Eng. *fossil*; *-ist.*] One versed in Fossilism (q.v.); a person who studies the nature and character of fossil substances.

"A species, as Mr. Janes the *fossilist* informed me, uncommonly valuable."—*Johnson: Journey to Western Islands.*

fŏs-sĭl′-ĭ-tȳ, *s.* [Eng. *fossil*; *i* connective; suff. *-ty* (q.v.).] The state or condition of a fossil.

fŏs-sĭl-īz-ā′-tion, *s.* [Eng. *fossiliz(e)*; *-ation.*] The act or process of converting animal remains or vegetable substances into fossils; fossilizing.

¶ The burying of animal or vegetable remains—the first step towards their fossilization—can take place on land by the growth of peat, by their being covered by blown sand, by the ejections and alluviums of volcanoes, in alluviums generally, in the ruins of landslips, or in the mud and stalagmite of caves and fissures. They are also constantly imbedded in subaqueous deposits, whether these be marine, lacustrine, or fluviatile. Peat is an antiseptic, and preserves organized bodies well. They are better kept in shale or any other fissile stratum than in sandstone: the latter is too porous. Some are silicified, some preserved from obliteration by the influence of calcareous matter, some by being made ferruginous, &c. Plants are often carbonized.

fŏs′-sĭl-īze, *v.t.* & *i.* [Eng. *fossil*; *-ize.*]

A. *Transitive:*

1. *Lit.:* To convert into a fossil.

"A small number of plants . . . will be *fossilized.*"—*Lyell: Geology*, ch. xlvii.

2. *Fig.:* To check the natural development by rendering fixed and immutable; to render permanently antiquated.

"Whereas Sanscrit remained fixed and *fossilized* for ever."—*Beames: Compar. Gram. Aryan Lang. of India*, vol. i. (1872) (Introd.), p. 5.

B. *Intransitive:*

1. *Lit.:* To become fossil; to be changed or converted into a fossil.

2. *Fig.:* To become antiquated and incapable of being influenced or affected by present circumstances.

fŏs-sĭl′-ō-ĝĭst, *s.* [Eng. *fossilog(y)*; *-ist.*] The same as FOSSILOLOGIST (q.v.).

fŏs-sĭl′-ō-ĝȳ, *s.* [Eng. *fossil*, and Gr. λόγος (*logos*) = a discourse.] The same as FOSSILOLOGY (q.v.).

fŏs-sĭl-ŏl′-ō-ĝĭst, *s.* [Eng. *fossilolog(y)*; *-ist.*] A person versed in Fossilology (q.v.); a fossilist.

fŏs-sĭl-ŏl′-ō-ĝȳ, *s.* [Eng. *fossil*; *o* connective, and Gr. λόγος (*logos*) = a discourse.] The science of fossils.

fŏs-sŏr′-ēs, fŏs-sŏr′-ĭ-ąs, *s.* [Lat. *fossor* = a digger, a delver; *fodio* = to dig, to delve.]

Entom.: Burrowing Hymenoptera. A subtribe of the hymenopterous tribe Aculeata. Sexes two, the individuals in both of which are furnished with wings, legs formed for burrowing or for running, tongue not elongated, but widened at the extremity. Habits not social. The females of the fossores construct holes in the ground, where they form their nests. Depositing their eggs, they next lay up for the future larvæ a supply of food consisting of spiders and caterpillars rendered half dead by being stung. Many of the fossores are called sandwasps. The subtribe is divided into eight families: (1) Scoliadæ, (2) Sapygidæ, (3) Pompilidæ, (4) Sphecidæ, (5) Bembicidæ, (6) Larridæ, (7) Nyssonidæ, and (8) Crabronidæ (q.v.).

fŏs-sŏr′-ĭ-ąl, *a.* & *s.* [Lat. *fossori(a)* = digging (as an occupation); Eng., &c. suff. *-al.*]

1. *Ord. Lang.:* Adapted for digging.

***B.** *Intrans.:* To rest, to rely, to defend. (Followed by *on* or *upon.*)

¶ (1) Crabb thus discriminates between to *found,* to *ground,* to *rest,* and to *build:* "To *found* implies the exercise of art and contrivance in making a support; to *ground* signifies to lay so deep that it may not totter; it is merely in the moral sense that they are here considered, as the verb to *ground* with this signification is never used otherwise. *Found* is applied to outward circumstances; *ground* to what passes inwardly . . . To *found* and *ground* are said of things which demand the full exercise of the mental powers; to *rest* is an action of less importance: whatever is *founded* requires and has the utmost support; whatever is *rested* is more by the will of the individual: a man *founds* his reasoning upon some unequivocal fact; he *rests* his assertion upon mere hearsay. To *found, ground,* and *rest* have always an immediate reference to the thing that supports; to *build* has an especial reference to that which is supported, to the superstructure that is raised." (*Crabb: Eng. Synon.*)

(2) For the difference between to *found* and to *institute,* see INSTITUTE.

fōūn-dā'-tion, *foun-da-ci-oun, *s.* [Fr. *fondation,* from Lat. *fundatio,* from *fundo* = to found; Sp. *fundacion;* Port. *fundação;* Ital. *fondazione.*]

8. That which is founded, instituted, or endowed; an institution founded or supported by an endowment.

II. *Hat-making:* The body of a hat or bonnet, of wool or inferior fur, upon which the napping of superior fur is laid and united at the battery.

¶ Crabb thus discriminates between *foundation, ground,* and *basis:* "A report is said to be without any *foundation,* which has taken its rise in mere conjecture, or in some arbitrary cause independent of all fact; a man's suspicion is said to be without *ground,* which is not supported by the shadow of external evidence: *unfounded* clamours are frequently raised against the measures of government; *groundless* jealousies frequently arise between families, to disturb the harmony of their intercourse. *Foundation* and *basis* may be compared with each other, either in the proper or in the improper significations: both *foundation* and *basis* are the lowest parts of any structure; but the former lies under *ground,* the latter stands above: the *foundation* supports some large and artificially erected pile; the *basis* supports a simple pillar: hence we speak of the *foundation* of St. Paul's, and the *base* or *basis* of the Monument." (*Crabb: Eng. Synon.*)

foundation-bolt, *s.* A bolt which keeps a bed-plate—of an engine, for instance—down to its substructure.

foundation-muslin, *s.*

Fabric: An open-worked, gummed fabric, used for stiffening dresses and bonnets.

foundation-pile, *s.*

Hydr. Eng.: A pile driven into soft or treacherous ground to form, with others, an unyielding basis for a structure.

foundation-sacrifice, *s.*

Comp. Mythol.: A sacrifice common to races of low culture, who sought to render buildings firm and stable by drenching the foundation-stones with blood, by burying a human victim beneath them, or by immuring some unfortunate wretch in the structure itself. Tradition asserts that such sacrifices were

practised in the Middle Ages in some form or other, at the castle of Liebenstein in Thuringia, at the walls of Copenhagen, and at Scutari, and Tylor states that so late as 1843, when a new bridge was built at Halle, a notion was abroad among people that a child was wanted to be built into the foundations. The idea underlying these sacrifices was the propitiation of evil spirits, or an endeavour to render them, in some sort, guardians of the structure. Hugh Miller (in his *My Schools and Schoolmasters*, ch. xi.), relates a conversation he had with a herd-boy on the subject of ghosts. The boy said: "It's the spirit of the man who was killed on the foundation-stone, just after it was laid, and then built into the wa' by the masons, that he might *keep* the castle by coming back again; and they're saying that a' the verra ould houses in the kintra had murdered men builded intil them in that way, and that they have a' o' them their bogle." The buccaneers of the Spanish Main are said to have killed and buried a negro or a Spaniard with their treasures, that his spirit might haunt the spot and drive away intruders. In this case, of course, the dominant idea was that of guardianship. There seems to be an allusion to some such rite in the book of Joshua: "He shall lay the foundation thereof in his firstborn, and in his youngest son shall he set up the gates of it" (vi. 26). The custom still lingers in some parts of Asia and Africa, and in Polynesia and Borneo.

"More cultured nations of Southern Asia have carried on into modern ages the rite of *foundation-sacrifice*."—*Tylor: Primitive Culture*, i. 97.

foundation-plate, *s.*

1. *Bookbind.:* The base plate on which ornaments are arranged in the stamping or embossing press.

2. *Steam-eng.:* The bed-plate of a steam-engine.

foundation-school, *s.* A school supported by an endowment; an endowed school.

foundation-stone, *s.*

1. A stone in a public building laid publicly with ceremony: it is not necessarily any part of the foundation.

2. The foundations.

"My castles are my king's alone,
From turret to *foundation-stone*."
Scott: Marmion, vi. 13.

* **foŭn-dā'-tion,** *v.t.* [FOUNDATION, *s.*] To found, to settle, to ground.

founders' cleansing-mill, *s.* A tumbling-box in which small castings are cleansed from adhering sand. In a similar box articles may be polished or rounded by mutual attrition, assisted, if need be, by an abradant, as sand or emery.

founders'-dust, *s.* Charcoal powder and coal and coke dust, ground fine, and sifted for casting purposes.

founders'-lathe, *s.* A lathe used in preparing the cores for loam-moulding, such as those for iron pipes. A central spindle, being prepared, is placed on centres or on V's, and the clay loam covering is plastered on and regulated by a templet or pattern.

founders'-sand, *s.* A species of sand used for making founding-moulds.

founders'-shares, *s. pl.* Shares issued to the founders of (or vendors to) a public company, as a part of the consideration for the business, or concession, &c., taken over, and not forming a part of the ordinary capital. As a rule, such shares only participate in profits after the payment of a fixed minimum dividend on paid-up capital.

foŭn'-dĕr (2), * **foun-dour,** * **fown-der,** *s.* [Eng. *found* (2); *-er.*]

1. One who founds or lays the foundation of; a builder; an erecter.

"Of famous cities we the *founders* know."
Waller: On St. James's Park, 9.

2. One from whom anything has its original or beginning; an author.

"Marchol theyr *founder*, patron, and precident."
Lydgate: Minor Poems, p. 164.

1. A tumbrel or ammunition-waggon.

2. A French baggage-vehicle.

fôu'-rĭ-ĕr-ĭşm, *s.* [Named from the founder, Charles Fourier (Def.); Eng. suff. *-ism.*]

Polit. Econ. & Hist.: A system partly of co-operation, partly of socialism, advocated, and to a certain extent carried out, by Charles Fourier, a Frenchman, born at Besançon, April 7, 1772. He was for some considerable time in a merchant's office, and was at a susceptible age when the ferment produced by the first French Revolution was continually bringing new views as to the reorganization of society before men's minds. A benevolent man, he for years attempted to devise a scheme for the benefit of society, and in a series of publications, which both the reviewers and the public, as a rule, ignored, made known the opinions since called by his name. He was a devout but liberal Roman Catholic, and a student of prophecy, and believed that he was acting in conformity with scripture principles in proposing his scheme. He died in Paris on Oct. 10, 1837, in his 66th year, too early to foresee the extent to which his views on the relations of capital and labour were destined ultimately to spread.

Fourier's scheme was that what he called from the word phalanx, a phalanstery, consisting of about 400 families, or 1,800 persons, should live together, combining their labour, upon a district about a square league in extent. The buying and selling transactions requisite for the support of the community, were to be managed by a single person, which would save a multitude of peddling operations. If any brought capital into the concern, it was not confiscated, but he was allowed interest upon it. The labour being carried on in common, the profits were apportioned on the following system. First a minimum of mere subsistence money was assigned to every member of the society, including those incapable of labour. The remainder of the profits were then divided in proportions agreed on beforehand, to remunerate labour and talent, and pay interest on the capital received. The profits divided thus were then expended by the individual recipients as they pleased. An effort was made about 1852 to form an industrial colony on Fourier's plan, but the attempt was unsuccessful.

fŏx, *s.* [A.S.; cogn. with Dut. *vos*; Icel. *fox, fôa*; Goth. *fauho*; O. H. Ger. *foha*; M. H. Ger. *vohe, vuhs*; Ger. *fuchs.*]

I. *Ordinary Language:*

1. *Lit.:* In the same sense as II. 3 (1).

"*Foxes* have holes, and the birds of the air have nests."—*Luke* ix. 58.

2. *Figuratively:*

(1) A sly, cunning fellow; a knave.

"It [metaphor] may be founded on comparison, first, of the qualities of a man with those of a beast; as when we call a crafty and cruel man a *fox*."—*Beattie: Moral Science*, pt. iv., ch. i., § i.

(2) A sword (from the figure of a fox being frequently engraved on the blades; but perhaps from Lat. *falx*).

"Thou diest on point of *fox*."
Shakesp.: Henry V., iv. 4.

II. *Technically:*

1. *Zoology:*

(1) *Spec.: Vulpes vulgaris*, formerly and still by many called, after the example of Linnæus, *Canis vulpes*. Its cunning is proverbial. It is an inhabitant of nearly all Europe, as well as of Western Asia and Northern Africa. It would probably be extinct in Britain, were it not preserved to be hunted. Its English book-name is the Common fox.

(2) *Gen.:* The genus Vulpes. The foxes differ from the dogs in having a long bushy tail, and the pupil of the eye elliptical or nearly linear by day, but becoming circular or nearly so by night. This fits them to be nocturnal animals. The American or Red Fox is *Canis fulvus*. Many skins are annually imported into Britain. *Vulpes lagopus* is the Arctic fox. The Deccan fox is *V. bengalensis*, though Bengal and the Deccan are some distance apart.

(3) *Callionymus lyra*, the Gemmeous Dragonet, a British fish, so called from its yellow colour.

2. *Naut.:* A small strand of rope made by twisting several rope-yarns together. Used for seizings, mats, sennits, and gaskets.

3. *Mach.:* A wedge driven into the split end of a bolt to tighten it. [Fox-bolt.]

fox-bats, *s. pl.*

Zool.: The bats with fox-like heads, constituting the family Pteropidæ. They are of large size, the Kalong (*Pteropus edulis*) measuring four to five feet between the tips of the expanded wings, and inhabit the Eastern Islands, Southern Asia, and Africa. [Flying-fox, Pteropidæ.]

fox-brush, *s.* The brush or tail of a fox.

fox-chop, *s.*

Bot.: Mesembryanthemum vulpinum.

fox-fish, *s.*

Zool.: [Fox, *s.*, II. 3 (3).].

fox-grape, *s.*

Bot.: Vitis vulpina, so called because its fruit has a foxy taste. It is a native of North America, where it is cultivated. The fruit of various improved varieties of it has been sent to Europe under the names of the Bland, the Isabella, the Oswego Tokay, &c.; all, however, are much inferior to that of the genuine grape, *Vitis vinifera*. Some other species of the genus with a foxy taste have also been called fox-grapes.

fox-grass, *s.*

Bot.: Geranium Robertianum, from the smell resembling that of a fox. (*Ency. of Agric.*; *Britten & Holland.*)

fox-key, *s.*

Mach.: A split cotter with a thin wedge of steel driven into the end to prevent its working back.

fox-shark, *s.*

Ichthy.: A shark, *Alopias*, or *Alopecias vulpes*; called also the Sea-fox, the Thresher, and the Sea-ape. It attains a length of about fifteen feet, and is found occasionally in the British seas. The resemblance to a fox is in the length and roughness of the tail.

*** fox-sleep,** *s.* A feigned sleep.

fox-tail, *s.* [Foxtail.]

*** fox-whelp,** *s.* Some kind of liquor.

"*Fox-whelp*, a beverage as much better than champagne, as it is honester, wholesomer, and cheaper."—*Southey: The Doctor*, Interchapt. xvi.

fox's-claws, *s. pl.*

Bot.: Lycopodium clavatum.

fox's-foot, *s.*

Bot.: A grass, *Dactylis glomerata.*

fŏx, *v.t. & i.* [Fox, *s.*]

A. *Transitive:*

* **I.** *Ordinary Language:*

Bot.: The genus Digitalis, and specially the British species, *D. purpurea*, the Purple Foxglove. It grows to the height of three or four feet, with very long spikes of numerous drooping flowers, which are generally purple, though occasionally white. It is common in Scotland, and in parts of England; rare in the eastern counties, but occurring sparingly in Epping Forest.

"Pan through the pastures often-times hath runne
To plucke the speckled *fox-gloves* from their stem."
Browne: Britannia's Pastorals, bk. ii., s. 4.

¶ The Canary foxglove is *Digitalis canariensis*; the Downy false foxglove is an American name for *Gerardia flava*; and the Ladies' foxglove is *Verbascum Thapsus.*

foxglove-shaped, *a.*

Bot.: Shaped like the corolla of Digitalis. Nearly the same as Campanulate, but longer and irregular.

fŏx'-hô͡und, *s.* [Eng. *fox*, and *hound.*] A hound kept and trained for hunting foxes. They are smaller than the staghound, averaging twenty-two to twenty-four inches in height. They vary very much in colour. They possess a very fine scent, great fleetness, and endurance.

fŏx'-hŭnt, *s.* [Eng. *fox*, and *hunt.*] The chasing or pursuing of a fox with hounds; a foxchase.

fŏx'-hŭnt-ẽr, *s.* [Eng. *fox*, and *hunter.*] One who hunts or chases foxes with hounds; one given to foxhunting.

"Such absurdity must have shocked even the roughest and plainest *foxhunter* in the House."—*Macaulay: Hist. Eng.*, ch. xviii.

fŏx'-hŭnt-ĭng, *a. & s.* [Eng. *fox*, and *hunting.*]

A. *As adj.:* Given to or fond of the hunting of foxes with hounds.

"*Foxhunting* squires and coffeehouse orators."—*Macaulay: Hist. Eng.*, ch. xix.

2. *Gen.:* The genus Alopecurus (q.v.).

foxtail-wedging, *s.*

Joinery: A mode of spreading the end of a tenon in the mortise, so as to give it a dovetail character to resist withdrawal. The same is applied to wooden pins which occupy holes not bored through. In the point of the pin is inserted a thin wedge of hard woad. When this reaches the bottom of the hole, it sinks into and spreads the end of the pin so as to bind it very firmly in the hole. With a tenon, it is usual to insert a number of small wedges, so that it may not be split much at any one point.

fŏx'-trăp, *s.* [Eng. *fox,* and *trap.*] A gin or trap set to catch foxes.

"Answer a question, at what hour of the night to set a *foxtrap?*"—*Tatler.*

*** fra,** *prep.* [From.]

fra, *s.* [Ital., for *frate* = brother, monk.] See etymology.

fra de diavolo, *s.*

Ecclesiol.: The devil's advocate (*Advocatus diaboli*), the advocate who, when the canonization of a saint by the pope is proposed, is appointed to urge all that he justly can against the character of the person whom it is contemplated to honour, and give reasons why the canonization should not be carried out. The analogy between this functionary and the devil is that both are accusers of the brethren (cf. Rev. xii. 10), and that διάβολος (*diabolos*) in Greek properly means a slanderer; the difference lies in their motives.

frăb, *v.t.* [Etym. doubtful.] To worry, to harass.

"I *frabbed* you and plagued you from the first."—*Mrs. Gaskell: Ruth,* ch. xxxvi.

frăb'-bĭt, *s.* [Frab, *v.*] Peevish.

fra-cas' (*s* silent), *s.* [Fr., = a crash, a dimin. from *fraccasser* = to shatter; Ital. *fracassare;* Lat. *quasso.*] An uproar; a disturbance; a noisy quarrel.

frache, *s.* [Etym. doubtful; cf. Norm. Fr. *frache* = freight.] A shallow iron pan to hold glass-ware while being annealed in a leer.

*** frăc'-ĭd,** *a.* [Lat. *fracidus* = mellow, soft.]

1. *Ord. Lang.:* Over-ripe; rotten from over-ripeness.

2. *Bot.:* Pasty, between fleshy and pulpy.

frăck, *a.* [A.S. *frec* = bold, rash; Sw. *fräch* = bold, impudent; Icel. *frekr* = voracious; Dan. *fræk* = audacious; Ger. *frech* = saucy; O. H. Ger. *freh* = greedy.] [Freak.]

1. Ready; eager; forward.

2. Stout in body.

3. Stout, firm in mind.

*** frăct,** *v.t.* [Lat. *fractus,* pa. par. of *frango* = to break.] To break; to violate; to infringe.

"My reliance on his *fracted* dates
Has smit my credit."
Shakesp.: Timon of Athens, ii. 1.

frăct'-a-ble, *s.* [Lat. *fractus* = broken, pa. par. of *frango* = to break.]

Arch.: A gable coping, when the coping follows the outline of the gable, and is broken into steps, crenelles, ogees, &c.

frăct'-ĕd, *a.* [Lat. *fractus,* pa. par. of *frango* = to break.]

1. *Ord. Lang.:* Broken.

"Nym, thou hast spoke the right, his heart is *fracted* and corroborate."—*Shakesp.: Henry V.,* ii. 1.

2. *Her.:* Having a part displaced as if broken: as, a chevron *fracted.*

frăc'-tion, * frac-cion, *s.* [Fr., *fraction,* from Lat. *fractio,* from *fractus,* pa. par. of *frango* = to break; Sp. *fraccion;* Ital. *frazione.*]

I. *Ordinary Language:*

1. The act of breaking; especially by violence; fracture; rupture.

"The surface of the earth hath been broke, and the parts of it dislocated; several parcels of nature retain still the evident marks of *fraction* and ruin."—*Burnet: Theory of the Earth.*

2. The state of being broken or fractured.

"Neither can the natural body of Christ be subiect to any *fraction* or breaking vp by yt Scripture, which saith: And ye shall break no bone of him."—*Foxe: Martyrs,* p. 1,050.

3. A fragment; a portion; a bit; a broken part.

"But understand well, that these degrees of signes, ben euerich of hem considered of lx. minutes, and euery minute of lx. secondes, and so forth into smal *fractions* infinite, as saieth Alcabucius."—*Chaucer: Of the Astrolabe.*

4. In the same sense as II. 1.

"I know we often proceed to *fractions* supposed to express less than unit, but in this notion we impose upon ourselves by shifting our ideas and considering that as a multitude which before we consider as one; therefore we cannot make a *fraction* without multiplying first before we divide."—*Search: Light of Nature,* vol. ii., pt. i., ch. ii.

* 5. A schism.

"The present *fractions* are from the same cause."—*Taylor: Liberty of Prophesying,* p. 403.

II. *Technically:*

1. *Arith.:* A broken number, the representation of one or more parts of a whole. Fractions are divided into Common or Vulgar, and Decimal. [Decimal fractions.] In the former, one number is placed above the other with a short line between, as $\frac{3}{4}$. The lower number is called the denominator, and shows into how many equal parts a unit is divided; the upper number, or numerator, shows how many of these parts are expressed by the fraction. Vulgar fractions may be Proper, having the numerator less than the denominator ($\frac{3}{4}$); Improper, having the numerator either equal to ($\frac{4}{4}$) or greater than the denominator ($\frac{9}{4}$): in the former case the fraction = unity, in the latter it may be reduced to an integer and a proper fraction ($1\frac{1}{4}$); Simple, consisting of a single expression ($\frac{3}{4}$); Compound, consisting of a fraction of a fraction ($\frac{3}{4} \times \frac{5}{6}$); or Mixed, composed of an integer and a whole number ($6\frac{3}{4}$).

* 2. *Eccles.:* The act or rite of breaking the bread in the celebration of the Holy Communion.

"The distributing the bread to the company, after the benediction and *fraction,* was customary among the Jews."—*Waterland: Works,* vii. 51.

¶ For the difference between *fraction* and *rupture,* see Rupture.

¶ (1) *Continued fractions:* [Continued, ¶ (3)].

(2) *Vanishing fractions:*

Alg.: Fractions which, if a certain supposition be carried out, will have their numerator and denominator destroyed at the same time by being made equivalent to 0.

frăc'-tion-al, *a.* [Eng. *fraction; -al.*] Of or pertaining to fractions; constituting a fraction; comprising a part or parts of a unit; forming but a small part; insignificant.

"We make a cypher the medium between increasing and decreasing numbers, commonly called absolute or whole numbers, and negative or *fractional* numbers."—*Cocker: Arithmetick.*

*** frăc'-tion-a-rȳ,** *a.* [Eng. *fraction; -ary.*] Fractional.

frăc'-tious, *a.* [Prov. Eng. *fratch* = to squabble, to quarrel, to chide.] [Fractious.] Peevish, fretful, snappish, apt to quarrel, cross.

"You will not find him *fractious.*"—*Morton: School of Reform.*

frăc'-tious-lȳ, *adv.* [Eng. *fractious; -ly.*] In a fractious, peevish, or fretful manner; peevishly, crossly.

frăc'-tious-nĕss, *s.* [Eng. *fractious; -ness.*] The quality or state of being fractious; peevishness; fretfulness.

"The tresson of Russell is to be attributed partly to *fractiousness.*"—*Macaulay: Hist. Eng.,* ch. xvii.

*** frăc'-tu-ral,** *a.* [Eng. *fractur(e); -al.*] Pertaining to or depending on a fracture.

frăc'-tūre, *s.* [Fr., from Lat. *fractura,* from *fractus,* pa. par. of *frango* = to break; Sp. & Port. *fractura;* Ital. *frattura.*]

I. *Ordinary Language:*

1. The act of breaking by violence; rupture.

"That may do it without any great *fracture* of the more stable and filed parts of nature, or the infringement of the laws thereof."—*Hale: Prim. Orig. of Mankind.*

2. A part broken.

"Likewise if any bones or limbs be broken, a cerot made with the seed of rue and wax together, is able to souder the *fracture.*"—*P. Holland: Plinie,* bk. xx., ch. xiii.

II. *Technically:*

1. *Min.:* The irregular surface produced by

breaking a mineral across, as distinguished from splitting it along the planes of cleavage. The chief kinds of fracture enumerated by William Phillips and others are Conchoidal, Even, Uneven, Splintery, and Hackly (q.v.)

2. *Surg.:* A solution of continuity in a bone. It is said to be simple when the bone only is divided, and compound when there is also a wound of the integuments communicating with the bone, which in such cases generally protrudes. In a comminuted fracture, the bone is broken into several pieces, and in a complicated fracture there is in addition to the injury done to the bone a lesion of some considerable vessel, nervous trunk, &c. Fractures are also termed transverse, oblique, &c., according to their direction.

¶ For the difference between *fracture* and *rupture*, see RUPTURE.

frăc'-tūre, *v.t.* [FRACTURE, *s.*] To break or snap across; to separate the continuity of the parts of.

"The leg was dressed, and the *fractured* bones united together."—*Wiseman: Surgery.*

* **fra-culde,** *a.* [FRECKLED.] Covered with freckles or spots.

"Fraking or *fraculde. Lentiginosus.*"—*Prompt. Parv.*

frāe, *prep.* [FRA.] From.

"'Ye'll be *frae* the north, young man?' began the latter."—*Scott: Waverley*, ch. xxix.

frē'-nu-lŭm, *s.* [Dim. of Lat. *frænum* (q.v.).]

Anat.: Anything small constituting a "bridle" or restraint to another structure, as *frænulum cerebri*, a slight median ridge between the posterior quadrigeminal tubercles of the cerebrum. (*Quain.*)

frē'-nŭm (pl. **frē'-na**), *s.* [Lat. = a bridle.]

Anat.: The name given to several membranous folds which bridle and retain certain organs—*e.g.*, *frænum linguæ*, a fold of the mucous membrane, binding down the tongue. The *Synovial fræna* are folds or duplications of the synovial membrane passing from one portion of it to another.

fra-gär'-ĭ-a, *s.* [Lat. *fraga* (genit. *fragorum*) =strawberries; *fragum*=a strawberry plant.]

Bot.: A genus of Rosaceæ, family Potentillidæ. The achenes are on a large, fleshy deciduous receptacle; the calyx is double, with as many external bracteoles at its summit as it has divisions, and alternating with them. One is British—viz., *Fragaria vesca*, the Wild Strawberry. Another, *F. elatior*, is a garden escape. The species is the probable origin of the Haut-bois Strawberry. [STRAWBERRY.]

* **frâght,** * **frâught** (*gh* silent), *s.* [FREIGHT.]

frăg'-ile, *a.* [Fr., from Lat. *fragilis*, from *frag-*, the root of *frango* = to break; Sp. & Port. *fragil*; Ital. *fragile.*]

1. Brittle, easily broken or destroyed; weak, frail, delicate.

"Much ostentation vain of fleshly arm,
And *fragile* arms." *Milton: P. R.*, iii. 388

2. Weak, slight, feeble, slender.

"When subtile wits have spun their thread too fine,
Tis weak and *fragile*, like Arachne's line."
Denham: Progress of Learning, 188.

¶ Crabb thus discriminates between *fragile*, *frail*, and *brittle*: "*Fragile* and *frail*, both come from the Lat. *fragilis*, signifying breakable; but the former is used in the proper sense only, and the latter more generally in the improper sense: man, corporeally considered, is a *fragile* creature, his frame is composed of *fragile* materials; mentally considered, he is a *frail* creature, for he is liable to every sort of *frailty*. *Brittle* denotes likewise a capacity to break, that is, properly breakable; but it conveys a stronger idea of this quality than *fragile*: the *fragile* applies to whatever will break from the effects of time; *brittle* to that which will not bear a temporary violence: in this sense all the works of men are *fragile*, and in fact all sublunary things; but glass, stone, and ice are peculiarly denominated *brittle*." (*Crabb: Eng. Synon.*)

frăg'-ile-lĭ, *adv.* [Eng. *fragile*; *-ly.*] In a fragile manner.

frăg'-ile-nĕss, *s.* [Eng. *fragile*; *-ness.*] The quality or state of being fragile; fragility.

fra-gil'-ĭ-tĭ, * **fra-gil-i-te,** * **fra-gil-i-tie,** *s.* [Fr. *fragilité*, from Lat. *fragilitas*, from *fragilis* = fragile (q.v.); Ital. *fragilità*; Sp. *fragilidad.*]

1. The quality or state of being fragile, or brittle; easiness to be broken; brittleness.

"Of *fragility* the cause is an impotency to be extended; and therefore stone is more *fragile* than metal."—*Bacon: Natural History*, § 841.

* 2. Frailty, weakness; liability to fail; liableness to fault.

"Earnestly beseeching the dictatour to forgive this humane *fragilitie* and youthful folly of Qu. Fabius."—*P. Holland: Livius*, p. 307.

frăg'-mĕnt, *s.* [Fr., from Lat. *fragmentum*, from *frag-*, base of *frango* = to break; Sp. & Port. *fragmento*; Ital. *fragmento, frammento.*]

I. *Ordinary Language:*

1. A piece broken off or separated from the main body by breaking; a small detached portion.

"If a thin or plated body, which, being of an even thickness, appears all over of one uniform colour, should be slit into threads, or broken into *fragments* of the same thickness with the plate, I see no reason why every thread or *fragment* should not keep its colour."—*Newton: Optics.*

2. A small piece or portion; a disconnected piece.

"On pieces of sycamore they play
The *fragments* of a Christmas hymn."
Wordsworth: Idle Shepherd Boys.

3. A small portion or amount; a minute point or part.

1. *Carpentry* :

(1) The skeleton structure of a wooden building, consisting of sills, posts, beams, sleepers, joists, and rafters, with the studding that is to form partitions.

(2) The outward work enclosing a door or window.

(3) The part of a door or window enclosing panels.

(4) A border or inclosure for a picture, or panes of glass.

2. *Embroidery* : A structure of four bars arranged in a square and adjustable in size, on which cloth or other fabric is stretched for quilting, embroidery, &c.

3. *Foundry* : A kind of ledge inclosing a board, which, being filled with wet sand, serves as a mould for castings.

4. *Hor.* : That which contains the mechanism of a watch or clock. It consists of two plates, and usually four pillars.

5. *Horticulture* :

(1) A glazed portable structure for protecting young plants from the effects of frosts.

(2) A sash-roofed box, used by gardeners for propagating.

6. *Mach.* : A term applied, especially in England, to machines built upon or within a framework of timbers, *e.g.*, the stocking-frame, lace-frame, water-frame, silk-frame, &c.

7. *Min.* : A framing-table (q.v.).

8. *Print.* : A stand supporting the cases used by a compositor. [Case (1), *s.*, II. 1.]

9. *Shipbuild.* : The framework or skeleton of a ship.

10. *Soap-making* : A box whose sides are removable when required, and locked together when the soap is to be poured in. As soon as the soap has acquired sufficient solidity, the sides are unlocked and taken down, exposing the block of soap, which is then cut up by wires which are passed through it to divide it into bars.

11. *Steam-eng.* : The strong work which supports the engine and boilers of a locomotive upon the wheels, and known as inside frame or outside frame, according to the position of the wheels relatively to the frame.

12. *Weav.* : The head of a batten in a loom.

¶ Crabb thus discriminates between *frame*, *temper*, *temperament*, and *constitution* : "*Frame* in its natural sense is that which forms the exterior edging of any thing, and consequently determines its form; it is applied to man physically or mentally, as denoting that constituent portion of him which seems to hold the rest together; which by an extension of the metaphor is likewise put for the whole contents, the whole body, or the whole mind. *Temper* and *temperament* signify the particular modes of being disposed or organized. *Frame*, when applied to the body, is taken in its most universal sense; as when we speak of the *frame* being violently agitated, or the human *frame* being wonderfully constituted; when applied to the mind it will admit either of a general or restricted signification. *Temper*, which is applicable only to the mind, is taken in the general or particular state of the individual: *temperament* and *constitution* mark the general state of the individual; the former comprehends a mixture of the physical and mental; the latter has a purely physical application." (*Crabb: Eng. Synon.*)

frame-bridge, *s.* A bridge constructed of timbers fitted together so as to combine the greatest degree of strength with the least amount of material.

frame-house, *s.* A house constructed with a wooden framework or skeleton.

frame-level, *s.* A mason's level.

frame-saw, *s.* A thin saw stretched in a frame which gives it sufficient rigidity in its work. The buhl-saw, for inlaying, is of this character.

frame-timbers, *s. pl.*

Carp. : The timbers constituting the frame or framework of a building, &c.

frām'-ĕr, *s.* [Eng. *fram(e)*; *-er.*] One who frames, makes, constructs, or contrives; a maker, a contriver, a former.

"Almighty *framer* of the skies!
O let our pure devotion rise,
Like incense in thy sight."
Chatterton: Hymn for Christmas Day.

frā'me-wŏrk, *s.* [Eng. *frame*, and *work.*]

I. *Literally* :

1. The frame or skeleton of a structure; the fabric for inclosing or supporting anything, as the *framework* of a building.

2. Work done in a frame.

II. *Figuratively* :

1. The structure, constitution, arrangement, or disposition of the parts of a thing.

"In this popular Hindu tale, we have the *framework* of one of the greatest epics of any age or country."—*Cox: Introd. to Mythology*, p. 5.

2. A body composed of pieces framed or fitted together; a compound body.

"A staunch and solid piece of *framework*, as any January could freeze together."—*Milton: Liberty of Unlicensed Printing.*

frām'-ing, *pr. par.*, *a.*, & *s.* [Frame, *v.*]

A. & B. *As pr. par. & particip. adj* : (See the verb).

C. *As substantive* :

I. *Ordinary Language* :

1. The act or process of constructing, putting together, or contriving.

2. A framework or frame.

"The *framing* of the vessel is of the ordinary type." —*Daily News*, Sept. 29, 1881.

II. *Technically:*

1. *Join.:* A mode of putting parts of a structure together. Joinery framing is of various descriptions, as square, bead, bead-and-fillet, ogee, &c.

2. *Min.:* An operation upon pounded or stamped ores, by which they are sorted into grades of comparative weight and consequent richness.

framing-chisel, *s.*

Carp.: A heavy chisel for making mortises. It has a socket-shank which receives the wooden handle on which the blows of the mallet are delivered.

framing-table, *s.*

Min.: A table eight feet long and four feet wide, with a ledge around it. At the upper end is the jagging-board, over which the sluices are so distributed that a small stream of water shall carry them gradually down on to the table. The richer portions of the ore rest upon the upper part, and the poorer, lighter portions are carried farther down: light impurities escape with the water. When the table is sufficiently full, it is lifted into a vertical position, so as to tip out its contents, which fall into the vat beneath.

*** frăm'-pal, * frăm'-pel, * frăm'-pōld, * fram-pul,** *a.* [Etym. doubtful.] Fretful, peevish, ill-natured, froward, quarrelsome, ill-tempered.

"Her husband! Alas, the sweet woman leads an ill life with him; he's a very jealousy man: she leads a very *frampold* life with him."—*Shakesp.: Merry Wives of Windsor*, ii. 2.

frăńc, * frăńk (1), *s.* [Fr. *franc.*] [FRANK, *a.*]

* 1. A name given to two coins current formerly in France, the one of gold, and worth about half-a-guinea, the other of silver and worth about three shillings and sixpence.

2. The modern French coin, the unit of value and the unit of account in France. It

FRANC.

is of silver, ·835 fine, and weighs 5 grammes; its value in sterling is strictly 8·8496568 pence, but it is usually reckoned at about 9½d. It is divided into 100 centimes.

*** frăńc,** *a.* [FRANK.]

franc-tireur, *s.*

Fr. Mil.: A sharpshooter or free-shooter; one of a body of men raised in France during the Franco-German war of 1870, and employed in guerilla warfare.

*** frăńc** (2), *** frank** (2), *s.* [FRANK (2), *s.*]

frăn'-çhīse, * fraun-chise, * fran-chyse, * fraun-chyse, *s. & a.* [Fr., from *franchissant*, pr. par. of *franchir* = to make free; *franc* = free.]

A. *As substantive:*

* I. *Ordinary Language:*

1. Freedom; liberty.

"We wolleth for oure *franchise* figghti,
And for our lond." *Robert of Gloucester*, p. 47.

2. A privilege; a right granted by the sovereign to an individual or to a body; an immunity or exemption from ordinary jurisdiction.

"*Franchise* and liberty are used as synonymous terms; and their definition is a royal privilege or branch of the sovereign's prerogative, subsisting in the hands of a subject; the kinds of them are various, and almost infinite. To be a county palatine is a *franchise*, vested in a number of persons. It is likewise a *franchise* for a number of persons to be incorporated and subsist as a body politic. Other *franchises* are to have a manor or lordship; to have waifs, estrays, royal fish: to have a fair or market; or to have a forest, warren, or fishery, endowed with privileges of royalty."—*Blackstone: Comment.*, bk. ii., ch. 2.

3. The district or extent of jurisdiction to which a certain privilege or right extends; the limit of a privilege or immunity.

"In the great *franchises* of the latter . . . the king's writ had no course."—*Hallam.*

4. A sanctuary or asylum for persons liable to be arrested.

"The king's sheriffs are empowered to enter all *franchises* for the apprehension of felons or traitors."—*Hallam.*

5. Frankness; generosity; nobility.

"Here may ye seen, how excellent *franchise*
In woman is whan they hem narwe avise."
Chaucer: C. T., 9,861.

II. *Technically:*

1. *Law:* An incorporeal hereditament, the same as liberty; a royal privilege or branch of the crown's prerogative subsisting in the hands of a subject. It arises either from royal grant or from prescription assumed to have been founded originally on such a grant. For different kinds of franchise see extract from Blackstone under I. 2.

2. *Law, Parliamentary Government, &c.:* The right of voting for a member of Parliament. The Act 8 Henry VI., passed in 1429, limited the county franchise to those who had freehold land or tenement to the value of forty shillings, and 10 Henry VI. made residence in the county in which the vote was to be recorded an essential qualification. The borough franchise varied in different places and was difficult to ascertain. The Acts 2 and 3 William IV. c. 45, passed in 1832, gave the franchise in counties to occupiers who paid £50 rent, and in the borough to those living in premises of the clear annual value of £10. In 1866 Earl Russell proposed the reduction of the borough franchise to £7. Believing that on a sound system of household finance a working man should have an income of nine or ten times the rent he paid, the Earl thought that those whom he proposed to admit as voters would have incomes of about £66 10s. a year. The Conservative party were against the reduction, and a "cave" [CAVE] suggestive of that of Adullam [ADULLAMITE] was formed among the Liberals, the combination thus formed being fatal to the government. Up till this time the mass of the people had shown little interest in the reform proposals, but on finding them withdrawn they became excited, and a procession forcing its way, on July 23, 1866, into Hyde Park by a breach made in the line of railings, after a victory over the numerous police who had been posted to defend the Park, convinced the Government that a settlement of the question could no longer be delayed with safety. A Reform Bill, brought in by the Conservative Government of Lord Derby and Mr. Disraeli, which had succeeded that of Earl Russell, and modified to a very large extent by the Liberal Opposition, received the royal assent on August 15, 1867. It is quoted as 30 and 31 Vict., c. 102. It conferred the parliamentary franchise on every borough householder rated for the relief of the poor directly or indirectly, who had paid his poor rates, and on lodgers who had occupied for a year rooms which, unfurnished and without attendance, would fetch £10 rent. In counties the franchise was given to all owners of landed property worth £5 a year, and occupiers of lands or tenements paying £12 a year of rent.

* **B.** *As adj.:* Enjoying a franchise or privilege; privileged.

"Yet he was fayne to departe and to go to Trecte, a *fraunches* towne for all maner of people, payeng for that they take."—*Berners: Froissart; Cronicle*, vol. ii., ch. clx.

*** frăn'-çhīse, * fraun-chise,** *v.t.* [FRANCHISE, *s.*] To make free; to enfranchise; to give freedom or liberty to.

"Which suffredist passioun
Oonly to *fraunchise* our mortalite."
Lydgate: Minor Poems, p. 249.

*** frăn'-çhīse-ment,** *s.* [Eng. *franchise; -ment.*] A release or setting free from any burden or restriction; freedom; liberty.

"That fate, which did thy *franchisement* inforce,
And from the depth of danger set thee free."
Drayton: Barons' Wars, bk. iii.

*** frăn'-çĭc,** *a.* [Fr. *Francique.*] Of or pertaining to the Franks or their language; Frankish.

frăn-çĭs'-ca, frăn-çĭs'que (que as k), *s.* [Fr. *francisque.*]

FRANCISCA.

Archæol.: The ancient Frankish battle-axe. It differed from the modern axe in the angle at which it was joined with the handle.

"Their weapons were a long sword, a two-edged axe, called a *francisca*, and a javelin."—*H. S. Stuart: Hist. of Infantry*, ch. iv.

Frăn-çĭs'-can, *a. & s.* [Fr. *Franciscain;* Ital. *Francisceno;* Lat. *Franciscanus* = pertaining to St. Francis of Assisi. (See def.)]

A. *As adj.:* Pertaining or relating to St. Francis. [B.]

B. *As substantive:*

1. *Sing.:* A member of the order described under 2.

2. *Pl.:* The followers of St. Francis, who was born in 1182, at Assisi, in Umbria, and spent his youth in dissoluteness; but being affected with serious sickness in his twenty-fourth year, and repenting of his sins, devoted himself to a religious and ascetic life. Hearing accidentally, in 1208, in a church the words of the Saviour (Matt. x. 9, 10), he considered that the essence of the Gospel was absolute poverty, and founded an order on this basis, which ultimately became one of the four, nay, even one of the two, great fraternities of mendicant friars. To manifest his humility he would not allow his followers to be called brethren (in Latin *fratres*), but only little brothers (Italian *fratricelli;* in Latin *fraterculi* or *fratres minores*), a designation which they still retain. Pope Innocent III., in 1210, and a council of Lateran, in 1215, approved of his rules for the government of his order, which enjoined poverty, chastity, and obedience, and in 1223 Pope Honorius III. issued a bull in his favour. He died, at Assisi, in 1226, and in 1230 was canonized by Pope Gregory IX., the anniversary of his death, October 4, being fixed as his festival. Even while he lived his order had become very powerful, and spread over the whole Western Church. In 1219 it is stated that 5,000 friars were present at a chapter which he held. In that year, or more probably in 1224, Franciscans came over to England. From 1228 till 1259 they contended with the Dominicans about precedency. When in 1274 Gregory X. reduced the mendicants to four orders the Franciscans were one of the four. At the suppression of the monasteries in England under Henry VIII., A.D. 1536 to 1538, the Franciscans had sixty-six abbeys or other religious houses. Their dress was a loose garment of a grey colour, reaching to their ankles, and a grey cowl, covered when they went into the streets with a cloak. From the prevalence of grey in their dress they were called Greyfriars. The order, in the course of its history, split into various branches.

FRANCISCAN FRIAR.

frăn-çĭs'-çō-a, *s.* [Named after Francis, Emperor of Austria, a patron of botany.]

Bot.: A genus of Scrophulariaceæ, tribe Salpiglossideæ. By some it is made a synonym of Brunsfelsia, or is merged in that genus. The root, leaves, &c., of *Franciscea uniflora* are used in syphilitic complaints, hence the plant is called by the Portuguese *Mercurio vegetal* (Vegetable Mercury). Its inner bark and herbaceous parts are very bitter. In small doses it is a purgative, emetic, and alexipharmic; in large ones it is an acrid poison. (*Martius.*)

*** frăńc'-īse,** *v.t.* [Eng. *franc* = frank; *-ise.*] To Frenchify.

"He was an Englishman *francised*."—*Fuller: Worthies; Hertford*, i. 435.

*** frăńck,** *v.t.* [Etym. doubtful.] To feed. [FRANKE.]

frăńck'-lĭn, *s.* [FRANKLIN.]

Frăń'-cō-, *pref.* [Lat. *Franc(us)* = a Frank; *o* connective.] French; as, the *Franco*-Prussian or *Franco*-German war of 1870-1.

frăń-cō'-a, *s.* [Named by Cavanilles, after F. Franco, of Valentia, a promoter of botany in the sixteenth century.]

Bot.: The typical genus of the order Francoaceæ (q.v.). It consists of herbaceous plants with lyrately pinnatifid, mostly radical leaves, and racemes of fine flowers. Four or five species are known. Their juice is said to be cooling and sedative. Their roots are used for dyeing black.

frăn-cō-ā'-çĕ-æ, *s. pl.* [Mod. Lat. *francoa*, and Lat. fem. pl. adj. suff. *-aceæ*.]

Bot.: An order of Hypogynous Exogens, alliance Ericales. It consists of stemless herbaceous plants, with lobed or pinnate exstipulate leaves. Stems, scape-like; inflorescence, a raceme; calyx, deeply four-cleft; petals, four, long persistent; stigma, four-lobed sessile; ovary, superior four-celled; ovules many, seeds minute. In 1845, Lindley enumerated two genera, and estimated the known species at five, all from Chili. They are used in medicine and for dyes.

frăn'-cō-lĭn, *s.* [Dimin. of Port. *frango* = a hen.]

Ornithology:

1. *Gen.:* The genus Francolinus (q.v.).

2. *Spec.:* The Common Francolin (*Francolinus vulgaris*). It is found in the south of Europe, in Malta and Sicily, in Asia, and in the north of Africa, feeding, like the common partridges, on insects and seeds. Its flesh is highly esteemed for food. It has a peculiarly loud whistle.

frăn-cō-lī'-nŭs, *s.* [FRANCOLIN.]

Ornith.: A genus of Perdicidæ (Partridges). [FRANCOLIN.]

frăn'-cō-līte, *s.* [From Wheal Franco (def.), and Gr. λίθος (*lithos*) = a stone.]

Min.: A variety of Apatite. It occurs in greyish-green or brown stalactitic matter, or in cubed crystals, at Wheal Franco, near Tavistock, in Devonshire. (*Dana.*)

* **frăn'-ġent,** *a.* [Lat. *frangens*, pr. par of *frango* = to break.] Causing fractures.

frăn-ġĭ-bĭl'-ĭ-tў, *s.* [Fr. *frangibilité*, from Low Lat. *frangibilis* = frangible (q.v.); Ital. *frangibilità*.] The quality or state of being frangible: liableness to be easily broken fragility.

frăn'-ġĭ-ble, * **fran-ge-byll,** *a.* [Low Lat. *frangibilis*, from Lat. *frango* = to break; Fr. & Eng. *frangible;* Ital. *frangibile*.] That may be easily broken; fragile, brittle.

"This was no doubt partly due to the *frangible* character of much of the material in which they wrought."—*Wilson: Prehistoric Man*, ch. vii.

* **frăn'-ġĭ-ble-nĕss,** *s.* [Eng. *frangible; -ness*.] The quality or state of being frangible; frangibility.

frăn'-ġĭ-pāne, *s.* [FRANGIPANI.]

1. A species of pastry made with cream, almonds, and sugar.

2. Frangipani (q.v.).

frăn-ġĭ-pa'-nĭ, *s.* [Named after the Italian Marquis Frangipani.] A species of perfume prepared from or in imitation of the scent of flowers of the *Plumiera rubra*, or Red Jasmine, a West Indian tree.

frăn'-gu-lĭc, *a.* [Eng., &c. *frangul(in); -ic* (*Chem.*).] Contained in or in any way connected with the bark of the berry-bearing Alder, *Rhamnus frangula*.

frangulic acid, *s.*

Chem.: $C_{14}H_8O_4$. It is obtained by boiling the bark of *Rhamnus frangula* with water for an hour, then adding caustic soda, and again boiling for several hours. The liquid is rendered acid with hydrochloric acid, and, boiled again for some hours. The frangulic acid separates out and is purified. It melts at 254°, is slightly soluble in hot, and insoluble in cold water; heated with zinc dust it yields small quantities of anthracene. It is isomeric with alizarin.

frăn'-gu-lĭn, *s.* [(*Rhamnus*) *frangul(a); -in* (*Chem.*).]

Chem.: $C_{20}H_{20}O_{10}$. A glucoside obtained by digesting the bark of *Rhamnus frangula* with alcohol, precipitating with lead acetate, and decomposing the precipitate with H_2S gas. The solution is filtered boiling, and deposits a lemon yellow crystalline mass, which dissolves in alkalies, forming a deep cherry-red solution. Frangulin boiled with hydrochloric acid yields glucose and frangulic acid.

* **frăn'-ion (ion as yŭn),** *s.* [Prob. a corruption of Fr. *fainéant*.] A boon companion; a paramour; a woman of loose character. (*Spenser: F. Q.*, II. ii. 37.) [FAINEANT.]

frănk (1), *a.*, *s.*, & *adv.* [Fr. *franc* = free, from Low Lat. *francus* = free, from O. H. Ger. *franko* = a freeman, a Frank.]

A. *As adjective:*

* 1. Free, unrestrained; unconstrained.

"Thy *frank* election made,
Thou hast power to choose, and they none to forsake."
Shakesp.: All's Well that Ends Well, ii. 3.

* 2. Liberal, free, generous; not niggardly.

"'Tis the ordinary practice of the world to be *frank* of civilities that cost them nothing."—*L'Estrange.*

3. Open, ingenuous, candid, sincere.

"Have not your *frank* and dutiful expressions, that cheerfulness and vivacity in your looks, rendered it much more acceptable?"—*Parl. Hist. Chas. II.* (an. 1660), *Lord Chancellor's Speech.*

* 4. Licentious, forward, bold, without restraint.

* 5. Free; without payment or conditions.

"Thou hast it won; for it is of *frank* gift,
And he will care for all the rest to shift."
Spenser: Mother Hubberds Tale, 531.

B. *As substantive:*

I. (*Of the form* Frank):

1. One of the ancient German tribe or tribes, natives of Franconia, from whom the country of France received its name.

2. A name given by the Turks, Greeks, and Arabs to the English, French, Italians, &c., inhabitants of Western Europe.

"Trust not for freedom to the *Franks*,
They have a king who buys and sells."
Byron: Don Juan, iii. 86.

* **II.** (*Of the form* frank):

1. A franc; a French coin.

2. A letter privileged to pass through the post free of payment.

"You'll have immediately, by several *franks*, my epistle to Lord Cobham."—*Pope: To Swift.*

3. A signature placed on a letter, and entitling it to pass through the post free of payment. The privilege of *franking* letters was enjoyed by all members of Parliament up to 1840, when it was abolished by the same Act which established penny postage.

C. *As adv.:* Freely, frankly, ungrudgingly.

"But, as he got it freely, so
He spent it *frank* and freely too."
Butler: Hudibras, pt. i., c. i.

¶ Crabb thus discriminates between *frank*, *candid*, *ingenuous*, *free*, *open*, and *plain:* "All these terms convey the idea of a readiness to communicate and to be communicated with; they are all opposed to concealment, but under different circumstances. The *frank* man is under no constraint; his thoughts and feelings are both set at ease, and his lips are ever ready to give utterance to the dictates of his heart; he has no reserve: the *candid* man has nothing to conceal; he speaks without regard to self-interest or any partial motive; he speaks nothing but the truth: the *ingenuous* man throws off all disguise; he scorns all artifice, and brings every thing to light; he speaks the whole truth. *Free*, *open*, and *plain* have not so high an office as the first three: *free* and *open* may be taken either in a good, bad, or indifferent sense; but seldomer in the first than in the two last senses. The *frank*, the *free*, and the *open* man all speak without constraint; but the *frank* man is not impertinent like the *free* man, nor indiscreet like the *open* man. The *frank* man speaks only of what concerns himself; the *free* man speaks of what concerns others." (*Crabb: Eng. Synon.*)

* **frank-bank,** * **frank-bench,** *s.* The same as FREE-BENCH (q.v.).

* **frank-ferm,** *s.*

Old Law: Lands or tenements changed in the nature of the fee, by feoffment, &c., out of knight service for certain yearly service.

* **frank-fold,** *s.*

Old Law: Foldage; the right or liberty of folding sheep upon any lands.

* **frănk** (2), * **franc,** *s.* & *a.* [O. Fr. *franc* = a pigsty.]

I. *As substantive:*

1. A pigsty.

"Where sups he? Doth the old boar feed in the old *frank?*"—*Shakesp.: 2 Henry IV.*, ii. 2.

2. An inclosure in which animals are fed to fatten.

"*Frank*, kepynge of fowlys to make fatte. *Saginarium.*"—*Prompt. Parv.*

II. *As adj.:* Fat, puffed up.

"And when they were ones *franke* and fatte, they stode up together proudelye agaynst the Lorde and his worde."—*Bale: Image*, pt. i.

* **frank-fed,** * **franke-fed,** *a.* Fattened up; fatted as in a frank.

"Whereas they that be kept up and crammed in coupes, cages, mewes, and bartons, or otherwise *frank-fed* and fatted, are in greater danger to fall into diseases."—*P. Holland: Plutarch*, p. 574.

frănk (1), *v.t.* [FRANK, *a.*]

1. *Ord. Lang.:* To send or get carried free of expense: as, To *frank* a letter.

"My lord Orrery writes to you to-morrow; and you see I send this under his cover, or at least *franked* by him."—*Swift.*

2. *Carp.:* To form a joint in by franking (q.v.).

* **frănk** (2), * **franke,** *v.t.* [FRANK (2), *s.*]

1. To shut up in a frank or sty.

"He is *franked* up to fatting for his pains."
Shakesp.: Richard III., i. 3.

2. To fatten up; to cram; to feed high.

"Such a land as, through the aboundance of all good things, might feed and *franke* them up."—*P. Holland: Livius*, p. 993.

frănk'-ăl-mōigne (*g* silent), *s.* [Eng. *frank;* Norm. Fr. *almoigne* = alms.]

Old Law: Lit., free alms. A tenure by which a religious corporation holds lands of the donor to them and their successors for ever, on condition of praying for the soul of the donor. It was also called Divine-service (q.v.).

* **frănk'-çhāse,** *s.* [Eng. *frank*, and *chase*.]

Old Law: The liberty or franchise of having a chase; free chase.

frănke, frăncke, *s.* [From the franking or feeding fat of cattle. (*Park: Theatr.*)]

Bot.: The spurry (*Spergula arvensis*).

franke-osier, *s.* [OSIER.]

* **franke-lin,** * **franke-lain,** *s.* [FRANKLIN.]

frăn-kē'-nĭ-a, *s.* [Named from John Franken, a Swedish botanist and professor of medicine at Upsal, who died in A.D. 1661.]

Bot.: Sea-heath. The typical genus of the order Frankeniaceæ (q.v.). Twelve species are known; one is British—*Frankenia lævis.* The stem is pubescent, the leaves revolute at their margin; flowers small and rose-coloured. Found in salt marshes on the south-east coast of England from Yarmouth to Kent, flowering in July and August. It occurs also in continental Europe, the north of Africa, and Asia, as far as India. (*Sir Joseph Hooker*, &c.)

fran-kĕ-nĭ-ā'-çe-æ, *s. pl.* [Mod. Lat. *frankenia*, and Lat. fem. pl. adj. suff. *-aceæ*.]

Bot.: Frankeniads. An order of Hypogynous Exogens, consisting of herbaceous plants or undershrubs, which have very much branched stems, opposite often revolute leaves, with a membraneous sheathing edge, but no stipules; flowers small, axillary, and terminal, generally pink; sepals four to five, pistils four to five; flowers four to five, or twice as many; ovary superior; style filiform; two, three, or four clefts; capsule one-celled, enclosed as the calyx; two, three, or four-valved, with many minute seeds. About twenty-four species are known. They are chiefly from the north of Africa and the south of Europe, and are mucilaginous and slightly aromatic. (*Lindley.*)

frăn-kĕn'-ĭ-ads, *s. pl.* [Mod. Lat. *franken(a)*, and Eng., &c. pl. suff. *-ads*.]

Bot.: The English name given by Lindley to the order Frankeniaceæ (q.v.).

* **frănk'-ēr,** *s.* [Eng. *frank* (1), v.; *-er*.] One who franks a letter, &c.

"He being my general *franker*, both to and fro, I have frequent occasion to insert a hasty note in my consignments to him."—*Southey: Letters*, iv. 170.

* **frănk'-feē,** *s.* [Eng. *frank*, and *fee*.]

frăt-rĭ-çĕl'-lĭ, fra-tĭ-çĕl-lĭ, frăt-rĭ-çĕl'-lĭ-ąnş, *s. pl.* [Low Lat. *fratricelli* = little brothers; *frater* = a brother.]

Ecclesiol. & Church History:

1. *Gen.:* Originally a name assumed in the thirteenth century by the Franciscans by direction of their founder to mark the humble character of their claims.

2. *Spec.:* One of the names claimed in the fourteenth century as a monopoly by the section of the Franciscans who remained true to the rigid rules of their founder when the majority of the order gradually welcomed some relaxation of their stringency. In A.D. 1317 Pope John XXII. ordered their extirpation, and many of them were cruelly put to death. The grievous offence in John's eyes was that they believed that the Pope had no right to relax the rule of St. Francis, thus prescribing limits to the papal authority. They are said to have continued to the Reformation, and embraced its doctrines. (*Mosheim,* &c.)

frăt'-rĭ-çĭd-ąl, *a.* [Eng. *fratricid(e); -al.*] Pertaining to or of the nature of fratricide.

frăt-rĭ-çīde, *s.* [Fr., from Lat. *fratricida* = the murderer of a brother; *fratricidium* = the murder of a brother, from *frater* = a brother, and *cædo* = to kill.]

I. *Ordinary Language:*

frâud, *fraude, *s.* [Fr. *fraude,* from Lat. *fraus* (genit. *fraudis*) = deceit; Sp. Port. & Ital. *fraude.*]

1. An act or course of deception deliberately practised with a view to gaining unlawful or unfair advantage; the obtaining or attempting to obtain goods under false pretences; deception, cheating, deceit.

"The next head of concurrent jurisdiction, that, namely, which the courts of equity early acquired over almost all matters of *fraud;* all matters in the private knowledge of the party, which, though concealed, are binding in conscience, and all judgments at law obtained through such *fraud* or concealment."—*Blackstone: Comment.*, bk. iii., ch. 17.

*2. Falseness, faithlessness, deceit.

"It [love] shall be fickle, false, and full of *fraud.*"
Shakesp.: Venus & Adonis, 1,141.

3. Stratagem, artifice, trick.

"To work in close design, by *fraud* or guile,
What force effected not." *Milton: P. L.*, i. 646.

*4. A snare, a trap.

"To draw the proud king Ahab into *fraud.*"
Milton: P. R., i. 372.

¶ For the difference between *fraud* and *deceit,* see DECEIT.

¶ (1) *Constructive fraud:*

Law: (See extract).

"Besides cases of actual and intentional fraud, the courts of equity recognize what are called *constructive frauds,* or such acts or contracts as, although not originating in any evil design to defraud or injure another, yet have a tendency to deceive, or to violate public or private confidence, and are therefore deemed worthy of repression equally with frauds of the more gross and palpable sort."—*Blackstone: Comment.*, bk. iii., ch. 17.

(2) *Pious fraud:*

Ch. Hist.: A fraud considered to be "pious" because it was planned and carried out for some pious object. From the first to the fifteenth century believers in such frauds existed, if, indeed, they are even yet extinct. Sound ethics, whether distinctively Christian or simply philanthropic, declares that there are no "pious" frauds: all are impious.

(3) *Statute of frauds:*

Law: A statute, 29 Charles II., c. 3, passed in A.D. 1676. It is believed that it was framed by Sir Matthew Hale, Lord Keeper Guilford, and Sir Leoline Jenkins. Among its complex provisions several enacted that important contracts about land, &c., should be in writing, so as to prevent the perjury which occurred when they had to be proved by parole evidence.

***frâud, *fraud-en,** *v.t.* [O. Fr. *frauder,* from Lat. *fraudo,* from *fraus* (genit. *fraudis*) = deceit, fraud; Ital. *fraudare.*] To defraud, to cheat.

Fraun'-hō-fẽr (**au** as **ŏw**), *s.* [A distinguished optician of Munich.] See the compound.

Fraunhofer's lines, *s. pl.*

Optics: Certain dark lines discovered by Wollaston, in 1802, in the solar spectrum, but first described in detail by Fraunhofer. If a pencil of solar rays be admitted through a narrow slit into a dark room, and then the slit be looked at through a prism of flint glass very

free from flaws, the lines will be seen delicately traced in large numbers parallel to the edge of the prism, and at very unequal intervals. Fraunhofer names the most remarkable of them A, a, B, C, D, E, b, F, G, and H. A is at the beginning of the red ray, B in the middle, and C at the boundary between it and the orange, D in the orange, E in the green, F in the blue, G in the indigo, and H in the violet: a is in the red and b in the green. About 3,000 lines have since been discriminated: some are fixed in position, others are variable. The latter are sometimes called atmospheric or telluric lines, being considered by certain physicists to be due to the absorption of the air. The study of these lines has since led to the introduction of the method of analysis called spectral analysis. (*Ganot.*)

frăx′-ĕ-tĭn, *s.* [Lat. *frax(inus)* = an ash tree; *-etin* (*Chem.*).]

Chem.: $C_{10}H_8O_5$. A substance obtained along with glucose by digesting fraxin with dilute sulphuric acid. It crystallizes in colourless needles, soluble in alcohol, and slightly soluble in water. It is soluble in sulphuric acid, forming a yellow solution, dissolves in nitric acid, colouring it purple, which turns red, then yellow, and ultimately becomes colourless. (*Watts: Dict. Chem.*)

frăx′-ĭn, *s.* [Lat. = *frax(inus)* = an ash tree; *-in* (*Chem.*).]

Chem.: $C_{16}H_{18}O_{10}$. Paviin, a glucoside of Fraxetin, which occurs in the bark of *Fraxinus excelsior*, the common ash, also along with Æsculin, in the bark of the horse-chestnut, *Æsculus hippocastanum*. Its dilute aqueous solution has a bluish-green fluorescence. It is identical with paviin. It crystallizes in yellowish needles, easily soluble in hot water.

frăx-ĭn′-ĕ-æ, *s. pl.* [Lat. *fraxinus*, and fem. pl. adj. suff. *-eæ.*]

Bot.: A tribe of Oleaceæ, distinguished by having the fruit samaroid.

frăx′-ĭ-nĕll, *s.* [Fr. *fraxinelle.*] [FRAXINELLA.]

Bot.: *Polygonatum multiflorum.*

frăx′-ĭ-nĕl-la, *s.* [Dimin. of Lat. *fraxinus* = an ash tree; Fr. *fraxinelle* = the Dittany (*Dictamnus*).]

Bot.: A name given to two rutaceous plants, *Dictamnus fraxinella* and *D. albus*, cultivated in gardens for their fragrant leaves and flowers. [DICTAMNUS.]

frăx′-ĭn-ŭs, *s.* [Lat. = an ash tree.]

* **fray-or,** *s.* [Fr. *frayeur.*] That which causes terror.

"A fyre burst out in Mr. John Buchan's closet-window. It continued whill eleven o'clock of the day with the greatest *frayor* and vehemency that ever I saw fyre do."—*Culloden Papers*, p. 27.

frăz′-ĕr-a, *s.* [FRASERA.]

* **frē,** *a.* [FREE, *a.*]

frēak, *s.* [A.S. *frec* = bold, rash; cogn. with Icel. *frekr* = greedy, voracious; Sw. *fräck* = impudent; Dan. *fræk* = audacious; Ger. *frech* = saucy.] A sudden wanton whim or caprice; a fancy, a humour, a vagary.

"For many of their actions and opinions were very wild *freaks* of fancy and humour."—*Glanvill: Essay* 2.

¶ Crabb thus discriminates between *freak* and *whim*: "A *freak* has more of childishness and humour than boldness in it: a *whim* has more of eccentricity than childishness in it. Fancy and fortune are both said to have their *freaks*, as they both deviate most widely in their movements from all rule: but *whims* are at most but singular deviations of the mind from its ordinary and even course." (*Crabb: Eng. Synon.*)

frēak, *v.t.* [From the same root as *freckle* (q.v.).] To variegate; to streak.

"Sables of glossy black, and dark embrowned,
Or beauteous, *freaked* with many a mingled hue."
Thomson: Winter, 814.

* **frēak′-ĭsh,** *a.* [Eng. *freak*; *-ish.*] Addicted to freaks; capricious, whimsical, fanciful, humoursome, grotesque.

"'Tis not enough, that Greek or Roman page,
At stated hours, his *freakish* thoughts engage."
Cowper: Tirocinium, 606.

* **frēak′-ĭsh-nĕss,** *s.* [Eng. *freakish*; *-ness.*] The quality or state of being freakish; capriciousness, caprice, whimsicalness.

"All *freakishness* of mind is checked."
Wordsworth: Rob Roy's Grave.

* **frēak′-sôme,** *s.* [Eng. *freak*; *-some.*] Given to freaks; freakish, capricious.

* **frēam,** *v.i.* [Lat. *fremo.*] To growl or grunt as a boar. (*Bailey.*)

"Hee *freams* and skrawling to the skye brays terribil noyseth." *Stanyhurst: Virgil; Æneid* ii. 234.

* **frēathe,** *v.i.* [Etym. doubtful.] To foam and seethe.

"A flood of pale green foam that hissed and *freathed*."
Alex. Smith: City Poems, p. 139.

frĕc′-kle, * **free-kel,** * **frek-ell,** *s.* [Icel. *freknur* = freckles: Sw. *fräkne*, pl. *fräknar*; Dan. *fregne*, pl. *fregner*; Ger. *fleck*, *flechen* = a spot; Gael. *breac* = spotted, variegated. Cf. *fleck.*]

1. A yellowish or light-brownish spot on the skin, particularly on the parts exposed, as the face, neck, and hands, caused by the sun.

"Women desire to be rid of the *freckles*, spots, and morphew that do injurie to their beautie."—*P. Holland: Plinie*, bk. xxxii., ch. vii.

2. Any small spot or discolouration.

"The farewel frosts and easterly winds now spot your tulips: therefore cover such with mats, to prevent *freckles*."—*Evelyn: Kalendarium Hortense; April.*

frĕc′-kle, *v.t. & i.* [FRECKLE, *s.*]

"That a man may right wel *frede*." *Gower*, ii. 119.

* **fred-stole,** * **freed-stool,** *s.* [A.S. *frith-stól*, from *frith*, Dan. *fred*, Ger. *friede* = peace, and *stól* = stool.] The seat of peace, a name given to a seat or chair near the altar, to which all fled who sought to obtain the privilege of sanctuary.

"He bestowed a *freed-stool* with large privilidges belonging thereunto."—*Fuller: Church Hist.*, II. v. 9.

frēē, * **fre,** * **fred,** *a., adv., & s.* [A.S. *freó*; cogn. with Dut. *vrij*; Icel. *frí*; Sw. & Dan. *fri*; Goth. *freis*; Ger. *frei.*]

A. *As adjective:*

I. *Ordinary Language:*

1. At liberty; not subject as a vassal or slave to another; not a prisoner.

"Tho folwed bond and *fre*." *Tristram*, iii. 78.

2. Not subject to the military or despotic power of any person or government; living under just and equal laws.

* 3. Noble; high-minded; gracious.

"He was ffayre mane and *free*." *Degrevant*, 30.

4. At liberty or with power to make choice for oneself.

"Not *free*, what proof could they have given sincere
Of true allegiance, constant faith, or love."
Milton: P. L., iii. 104.

* 5. Unconcerned; without care.

"Fly whilst thou art blest and *free*."
Shakesp.: Timon of Athens, iv. 3.

6. Not arbitrary or despotic; equal and just to all alike: as, a *free* government.

7. That may or can be used, enjoyed, or taken advantage of by all without charge; open and accessible to all; unappropriated: as, a *free* school; *free* seats.

"Why, sir, I pray, are not the streets as *free*
For me as for you."
Shakesp.: Taming of the Shrew, i. 2.

8. Gratuitous, voluntary; done or given freely, readily, or without importunity or purchase: as, a *free* gift.

9. Exempt, clear.

"Crist was all thwerrt ut of sinne *fre*."
Ormulum, 18,613.

*10. Innocent, guiltless, harmless.

"Make mad the guilty, and appal the *free*,
Confound the ignorant." *Shakesp.: Hamlet*, ii. 2.

11. Clear from, not encumbered or affected with. (Followed by *from*, but *of* was formerly used.)

"Infirmities that honesty is never *free of*."
Shakesp.: Winter's Tale, i. 2.

12. Not obstructed; having a clear passage or channel.

"I breathe *free* breath."
Shakesp.: Love's Labour's Lost, v. 2.

*13. Ready, willing.

"Montano with his *free* duty recommends you thus."
Shakesp.: Othello, i. 3.

14. Unrestrained, licentious, immoderate, excessive; going beyond bounds or to excess.

"Being one day very *free* at a great feast, he suddenly broke forth into a great laughter."—*Hakewill.*

15. Open, candid, ingenuous, frank, unreserved; communicative.

"Will you be *free* and candid to your friend?"
Otway: Orphan, i. 2.

16. Liberal, bounteous, open-handed, not parsimonious or niggardly.

"Alexandrian verses, of twelve syllables, should never be allowed . . . Mr. Dryden has been too *free* of these."—*Pope.*

17. Ready, eager, willing, spirited: as, a *free* horse.

18. Admitted to or invested with certain privileges or immunities. (With *of*.)

"Art thou *of* Bethlem's noble college *free*?"
Dryden: Persius, sat. v.

19. Not stiff; spirited.

"Having played a much *freer* innings than usual."
—*Daily Telegraph*, Sept. 22, 1882.

II. *Technically:*

1. *Botany:*

(1) *Of one organ or structure:* Not adhering to anything else; not adnate to any other body.

(2) *Of two organs or structures:* Apart; not connected.

2. *Chem.:* Not chemically combined with any other body: as, *free* carbonic acid.

¶ *Free* is much used in compounds, the meanings of which are obvious.

***B.** *As adv.:* Freely, readily, willingly.

"I as *free* forgive you as I would be forgiven."
Shakesp.: Henry VIII., ii. 1.

***C.** *As subst.:* A noble, high-minded man or woman.

"The knyght speakes to that *free*
Maydame, wytes nat me." *Degrevant*, 413.

¶ (1) Crabb thus discriminates between *free* and *liberal*: "In all its acceptations *free* is a term of dispraise, and *liberal* that of commendation. To be *free* signifies to act or think at will; to be *liberal* is to act according to the dictates of an enlarged heart and an enlightened mind."

(2) He thus discriminates between *free* and *exempt*: "The condition and not the conduct of men is here considered. *Freedom* is either accidental or intentional; the *exemption* is always intentional: we may be *free* from disorders, or *free* from troubles; we are *exempt*, that is *exempted* by government, from serving in the militia. *Free* is applied to everything from which any one may wish to be *free*; but *exempt*, on the contrary, to those burdens which we should share with others."

(3) He thus discriminates between *free* and *familiar*: "To be *free* is to be disengaged from all the constraints which the ceremonies of social intercourse impose; to be *familiar* is to be upon the footing of a *familiar*, of a relative, or one of the same family." (*Crabb: Eng. Synon.*)

(4) For the difference between *free* and *communicative*, see COMMUNICATIVE: for that between *free* and *frank*, see FRANK.

¶ (1) *To sail free, to go free, or to have a free wind:*

Naut.: To sail somewhat further from the wind than when close-hauled.

(2) *To make free:* To take liberties; to go beyond proper bounds; to help oneself.

free-and-easy, *a. & s*

A. *As adj.:* Unconstrained; easy in manners

B. *As subst.:* A sort of club or social meeting, at which the members smoke, drink, sing, &c., and enjoy themselves without being bound to any rules.

"Clubs of all ranks, from those which have lined Pall Mall and St. James's Street with their palaces, down to the *free-and-easy* which meets in the shabby parlour of a village inn."—*Macaulay: Essays; Gladstone on Church & State.*

free-board, *s.*

1. *Naut.:* So much of the vessel's side as is included between the plank-sheer and the water-line.

"It would be wrong to assume that a low *free-board* alone was the cause of disaster."—*British Quarterly Review* (1873), vol. lvii., p. 115.

2. *Agric.:* Land claimed in some places beyond or without a fence. It is said to be 2½ ft. in extent.

***free-borough men,** *s. pl.*

Old Law: Such great men as did not engage, like the frankpledge men, to become sureties for the good behaviour of themselves and others. [FRANKPLEDGE.]

free-calyx, *s.*

Bot.: A superior calyx. One adherent to the ovary which it renders inferior. (*Lindley.*)

free-central, *s.*

Bot.: Free and in the centre.

Free-central Placentation:

Bot.: Placentation in which one placenta stands in the centre of the ovary like a column. Example, the fruit of Primulaceæ.

free-chant, *s.*

Mus.: A form of recitative music for the Psalms and Canticles, in which a phrase, consisting of two chords only, is applied to each hemistich of the words. The author of the form, Mr. John Crowdy, in his *Free Chant Cadences*, claims for it that it removes all difficulties in dividing the words, and enables the unskilled worshipper to join confidently in the chanting, without the assistance of any marks beyond the colons provided for the purpose in the Prayer Book.

free-charge, *s.*

Elect.: That part of an induced current of electricity which is free to escape through the medium of the atmosphere to surrounding conductors. [FREE-ELECTRICITY.]

free-chase, *s.* [FRANK-CHASE.]

free church, *s.*

Ecclesiol. & Church History:

1. *Pl.* (*Free Churches*): A name often given by English Nonconformists to the Christian denominations in this country free from state patronage and control.

2. *Singular:*

(1) A church free from state control. [1, also ¶ 2, 3.]

(2) A church in which there are no enforced payments. [¶ 1.]

3. *Sing.* (*Spec.*): The Free Church of Scotland (q.v.).

¶ (1) *Free and Open Church Association:*

Ecclesiol. & Ch. Hist.: An association which has for one object to abolish in the Church of England pew rents as well as pews, allowing no ownership in the latter to be claimed by individual members of the congregation, but maintaining the equal right of all parishioners to the free use of seats in churches. It is believed that this will tend to remove one of the causes which seriously diminish the attendance of the working classes at church. To meet the financial loss produced by the abolition of pew rents, the revival of the weekly offertory is advocated. The other object is to have arrangements made to open the churches from morning to night, not simply on Sundays, but on every day, that those who have no privacy for prayer and meditation at home, may have a place of refuge to which they may have recourse at any time. The Society was founded in 1866, has among its patrons two archbishops and many bishops, besides a long list of distinguished vice-patrons. It at times aids churches with pecuniary grants, but only if they are "free."

(2) *Free Church of England:*

Ecclesiol. & Ch. Hist.: An evangelical Protestant denomination founded on the basis of recognising only two orders—the first being presbyters, and the second deacons. "Nevertheless, the first order is divided into two distinct offices—viz., bishops and presbyters, This church maintains the ecclesiastical parity of presbyters, whether episcopally or otherwise ordained." (*Declaration by Convocation of F. C. of England*, 1846.) The governing body is the Convocation, consisting of all the clergy and laity in the several churches. The impulse which gave the church birth was communicated by the Tractarian movement of 1832, a reaction against which created a few "free churches" in the West of England; the Shore controversy (1843 to 1849) and the Gorham case (1849–50) promoted its development. It was enrolled in Chancery by a deed poll in 1863. A primus was consecrated in 1876 by a Bishop of the Reformed Church in America. The bishops are in the Canterbury line of Episcopal succession. (*Bishop Meyers.*)

(3) *Free Church of Scotland; Free Church:*

Ecclesiol. & Ch. Hist.: The name assumed by the large number of ministers and their adherents who left the Scottish Establishment at the "Disruption" of May 18, 1843. [DISRUPTION.] They had seceded in vindication of what they called the "Headship of Christ," *i.e.*, to gain liberty to obey what they deemed the will of their Divine Lord in all Church arrangements. To a large extent they obtained the freedom they sought. Whilst they were established, the first collision with the secular law courts had been in connection with a proposed modification of lay patronage. The Church now constituted itself on the basis of ignoring lay patronage altogether, and giving the communicants of each congregation the right to elect their own pastor. A second collision had arisen through the Church—it appeared illegally—claiming the power to subdivide over-populous parishes, build chapels-of-ease, and give votes in the Church courts to their ministers. Dissevered from the state, it found itself free to do what it pleased in the matter. The "Cardross case," litigated between 1858 and 1861, was important, as raising the question how far the liberty claimed by the Church in its disestablished condition is recognised by the courts. The Court of Law found that in certain circumstances it will entertain a writ for damages against the Church, on the allegation that the Church has violated its own rules, in a case of discipline, to the prejudice of the civil interests of the party dealt with. They found, however, that with a view to damages, the party in this case must aver and establish malice on the part of the Church. The judges based their decision on the ground that the Church's rules constitute a contract between the members of the body. They did not appear to contemplate the idea of interfering with the Church's discipline otherwise than by enforcing damages when found to be due. The case was ultimately abandoned by the pursuer or plaintiff.

When the Disruption took place, the financial difficulties which the secessionists had to face were very formidable. Wherever the Free Church had adherents, which was in nearly every parish, fresh places of worship had to be built in lieu of those lost; at least small stipends to be provided for the ministers whose stipends (whether provided by the State or their parishioners) were gone. All the Scottish established missionaries to the Jews or the Gentiles, having joined the seceding party, had to be provided for. After a certain breathing-time, theological colleges had also to be built, day schools and manses (in English, parsonages) provided in connection with the several churches. All was at last successfully accomplished, and great advance made, both at home and abroad. One part of the financial arrangements which has attracted most notice, was the Sustentation Fund (q.v.).

From 1863 to 1873 negotiations were carried on for an amalgamation with the United Presbyterians, most of whom were opposed (which the Free Churchmen theoretically were not) to the principle of establishments, but these were brought to an end by the action of a resolute minority opposed to union. In 1876, the Reformed Presbyterians, or Cameronians, joined the Free Church. The idea being entertained by some statesmen and others that the abolition of patronage would lead to the return of many Free Churchmen to the Scottish Establishment, a Bill for the purpose was introduced into Parliament by the Duke of Richmond, and, strongly supported by the Duke of Argyle, received the Royal assent in 1874. Its effects on the Free Church have hitherto (till 1883) been but trifling.

On March 31, 1844, ten and a half months after the disruption, the Free Church had 722 congregations and sanctioned stations. It had raised for all purposes £366,719 14s. 3d. On March 31, 1883, it had 1,861 congregations

or sanctioned stations, with 314,027 communicants. From March 18, 1882, to March 31, 1883, it raised £580,659 13s. 0½d., of which there was subscribed to the Sustentation Fund £170,358 4s. 7d.

free-city, *s.* A city or town of the German Empire, independent in its government and franchise, and virtually forming an independent state by itself. They were formerly many in number, but only three now exist—viz., Hamburg, Lübeck, and Bremen.

free-companies, *s. pl.*

Hist.: The name given to bodies of disbanded soldiers who ravaged France after the Peace of Bretigny, concluded on May 8, 1360. They were called also Free Lances and Condottieri.

free-course, *s.*

Maritime law: The state of having the wind from a favourable quarter.

free-electricity, *s.*

Elect.: The portion or amount of electricity which, to restore disturbed equilibrium, can pass from a battery to an adjacent conductor, or from one conductor to another. [FREE-CHARGE.]

free-fishery, *s.*

Old Law: The exclusive right of fishing in a public river. It was a royal franchise, and was distinguished from a several and a common of fishery, the former derived from the owner of the soil, the latter common to all. Other definitions have been given. The Great Charter and its confirmations prohibited free fishery. (*Blackstone*, &c.)

free-fugue, *s.*

Mus.: A fugue in which the answer and general treatment are not according to strict rules. [FUGUE.]

free-gills or **lamellæ,** *s. pl.*

Bot.: The lamellæ or gills of an agaricus, when they do not adhere to the stipes. (*Lindley.*)

free-grace, *s.*

Theol.: The exact expression, "free grace," does not occur in Scripture, but a near approach to it does in the words "being justified freely by his grace" (Rom. iii. 24). Its import is a gift conferred, not on account of merit in the recipient, but simply of grace—*i.e.*, of free favour, with unmerited kindness. The gift specially referred to is the gift of salvation through the merits of the Saviour.

* **free-lance,** *s.*

1. *Lit.:* A member of one of those companies of knights who, after the Crusades, wandered about offering their services to the highest bidder. The name was specially applied to those belonging to the Free Companies (q.v.).

2. *Fig.:* A controversialist whose pen is used independently, so that no party can calculate on his aid; or one who sells his pen to the highest bidder, careless of the views he advocates.

free-love, *s.* The doctrine that the affections should be free to fix on any object to which they are drawn. In its extreme form, it sets aside marriage, and all vows of sexual fidelity for life, or even for a limited period, giving free scope to every passing caprice of the affections. It is in conflict with the Bible, with the generally-accepted canons of ethics, and with the laws of every civilized country in the world.

free-parts, *s.*

Music: Additional parts to a canon or fugue, having independent melodies, in order to strengthen or complete the harmony.

free-pass, *s.* A pass or ticket entitling the holder to travel or to enter an exhibition, theatre, &c., free of charge.

free-port, *s.*

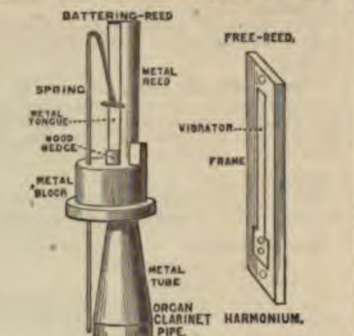
Commerce:

1. A port where ships of all nations may load or discharge cargo free of duty, provided the goods are not carried into the adjoining countries.

2. A port where all kinds of goods are received from ships of all nations at equal rates.

free-reed, *s.*

Music: An elastic tongue, usually of brass, and playing in a long rectangular opening in a plate to which one end of it is riveted. The name is given to distinguish it from the



FREE-REED.

reed which batters against the seat, as in the clarinet, some organ-pipes, the bassoon, and oboe. These battering-reeds are usually of wood. The free-reed is used in the accordeon, and similar instruments, and in most of the reed-pipes of organs.

* **free-services,** *s. pl.*

Feud. Syst.: Such services which it was not derogatory to a freeman to perform—*e.g.*, serving under his lord in war.

free-ship, *s.*

Law: A neutral ship. (*Wharton.*)

free-shooter, *s.* A franc-tireur (q.v.).

* **free-socage,** *s.*

Law: A kind of tenure of land. [SOCAGE.]

free-soil, *a.* A term applied to the principles of a party in the United States who advocated the non-extension of slavery.

free-soiler, *s.* A member or supporter of the free-soil party.

free-soilism, *s.* The principles of the free-soil party.

free-spirits, *s. pl.*

Ecclesiol. & Ch. Hist.: The same as BRETHREN OF THE FREE SPIRIT (q.v.).

free-states, *s. pl.* Those states of the Union in which slavery never existed, or in which it was abolished before the Civil War.

free-stuff, *s.*

Carp.: Timber free from knots; clear-stuff.

free-style, *s.*

Music: Composition not absolutely according to the strict rules of counterpoint.

free-templar, *s.* A member of a temperance organization which broke off from the Good Templars, its distinctive tenet being that each lodge should be free and independent, and not subordinate to a grand lodge.

free templary, free templarism, *s.* The distinctive views held by the Free-Templars. [FREE TEMPLAR.]

free-trade, *s.*

Political Econ., Comm., Hist., & Ord. Lang.: Trade exempt from all artificial restraints, the free exchange of commodities at home and abroad. Its great principle or aim is to buy in the cheapest market and sell in the dearest one; and it seeks the removal of all legislative impediments, whether in this or other countries, to the realisation of its programme. Even those who denounce the cardinal principle of free-trade on account of its apparent selfishness, habitually carry it out in practice. Other things being equal, they buy at a shop where the article they require is priced lower than at the shops adjacent; in other words, they buy in the cheapest market. When they put an article of their own up to auction, they direct that it shall be knocked down to the highest bidder, in other words they sell in the dearest market. It is a moot point whether it is expedient to protect a new manufacture in a colony into which it has just been introduced, and then strike off all protection when it has passed its infancy. Some free-traders have also thought that, in the case of a foreign bounty, so large as to enable one receiving it to sell an article absolutely below prime cost, some temporary protection might be given to a home manufacturer whom this was designed to ruin; the majority would carry out rigid free-trade, and all who hold the doctrine believe that the exceptions to its operation should be as few as possible.

The departure from free-trade most difficult, nay, hopeless to avoid, is that which arises from the necessity of apportioning taxation to the resources of the several classes of society. Theoretically there should be no indirect taxes. Every one should be free to export or import whatever he likes, and then pay by an income tax levied on the resources which he has made during the year; but, practically speaking, an income tax cannot be levied on the great mass of people, who, if they do not pay indirect taxes, will be exempt from public financial burdens altogether. Every such tax more or less violates free trade.

Taxes for the purpose of protecting native industry once abounded. Each was really a pauper dole; nor were the recipients of the gift benefited by the ill-judged liberality.

Early in 1776, Adam Smith, formerly a Glasgow professor, but then living in his native town of Kirkcaldy, published his celebrated work, *Inquiry into the Nature and Causes of the Wealth of Nations.* In this comprehensive treatise, free-trade is clearly advocated. It took about fifty years for the views enunciated to act on the Government, but they did so at last. The great contest took place in connection with the Corn Laws, an Act for the abolition of which became law on June 26, 1846. The principles of free-trade were carried out in the immediately succeeding years. They are now nominally assented to by both the great political parties in the State, and are being slowly learned by foreign nations, their adoption by any one producing prosperity far beyond that enjoyed under the protectionist system. [BOUNTY, CORN-LAWS, EXPORT, IMPORT, NAVIGATION-LAWS.]

free-will, *s. & a.*

A. *As substantive:*

I. *Ordinary Language:*

1. The power of directing our own actions without any restraining or constraining influence or power.

"We have a power to suspend the prosecution of this or that desire; this seems to me the source of all liberty; in this seems to consist that which is improperly called *free-will.*"—*Locke.*

2. Voluntariness, spontaneity.

"I make a decree, that all they of the people of Israel in my realm, which are minded of their own *free-will* to go up to Jerusalem, go with thee."—*Ezra* vii. 13.

II. *Technically:*

1. *Metaph.:* The power which the will has, or is supposed to have, to adopt either of two courses open to it, just as it pleases. From the philosophical point of view, however, this does not make the will really free. If it be under the control of intellect so clear, and so much preponderating over passion, that of two courses open to it, it uniformly chooses the more eligible, then it is compelled by its very constitution so to act, and can that which is compelled be called free? If differently constituted, with feeble intellect and dominant passion, it cannot resist a certain temptation in its path, and therefore is what is popularly called the "slave" of a certain vice, the question may be asked, "Is a slave free?" From the philosophic view, there is a scheme of causation as perfect in the moral as in the material world, the wills of an infinite number of individuals constituting links of the chain. To reconcile "liberty" with "necessity" has long been attempted, but with limited success, though both are true. A first step towards its settlement is taken when it is shown, as Hume clearly does in his *Essay on Liberty and Necessity*, that the dispute carried on for ages on these subjects is only one about words, for the advocate for liberty grants all that the necessitarian asks, and the necessitarian all that is claimed by the advocate for liberty. A standard work on the subject is Jonathan Edwards's *Inquiry into the Freedom of the Will* (1754).

2. *Theol.:* The same difficulty exists in re-

conciling the omnipotence of God and the freedom of man's will with its attendant responsibility (Rom. ix. 19, 20). Christians in general accept both doctrines, though two antagonistic views—the Calvinistic and the Arminian—are entertained on the subject. The doctrine of the Church of England may be seen in the Tenth Article. [ARMINIAN, CALVINISM, FIVE POINTS.]

"Others . . . reasoned high
Of providence, foreknowledge, will and fate;
Fix'd fate, *free-will*, fore-knowledge absolute,
And found no end." *Milton: P. L.*, bk. ii. 560.

B. *As adj.:* Given freely; with free-will.

"Accept, I beseech thee, the *free-will* offerings of my mouth, O Lord."—*Ps.* cxix. 108.

freē, *v.t.* [FREE, *a.*]

1. To set free or at liberty; to release from slavery, captivity or confinement; to manumit.

"Canst thou no other master understand,
Than him that *freed* thee by the pretor's wand?"
Dryden: Persius, sat. v.

2. To deliver from any despotic government or authority; to liberate; to deliver.

"He recovered the temple, *freed* the city, and upheld the laws which were going down."—2 *Maccabees* ii. 22.

3. To disentangle or clear from any encumbrance or obstruction; to disengage; to remove any encumbrance or obstacle from: as, To *free* the feet from fetters.

4. To clear or set free from anything ill; to rid.

"William, *freed* from an enemy which had given himself and his father so many alarms, renewed his ill-treatment of his brothers."—*Burke: Abridg. Eng. Hist.*, bk. iii., ch. iii.

5. To exempt as from any oppressive condition or duty.

* 6. To remove; to take or do away; to clear.

"We may again . . .
Free from our feasts and banquets bloody knives."
Shakesp.: Macbeth, iii. 6.

* 7. To acquit, to absolve; to clear from any stain or charge.

"I *free* you from it." *Shakesp.: Henry VIII.*, ii. 4.

* 8. To frank; to cause to pass free of charge.

"Please to *free* this letter to Miss Lucy Porter in Lichfield."—*Johnson: To Mrs. Thrale* (June, 1775).

* 9. To open so as to allow free passage through.

"This master key
Frees every lock and leads us to his person."
Dryden: Don Sebastian, iv. 1.

¶ Crabb thus discriminates between to *free*, to *set free*, to *deliver*, and to *liberate*: "To *free* is properly to make *free*, in distinction from *set free*; the first is employed in what concerns ourselves, and the second in that which concerns another. . . . We are *delivered* or *liberated* from that which others have imposed upon us; the former from evils in general, the latter from the evil of confinement. . . . When applied in a spiritual sense *free* is applied to sin; *set free* is employed for obligation and responsibility; *deliver* is employed for external circumstances." (*Crabb: Eng. Synon.*)

freē'-bĕnçh, *s.* [Eng. *free*, and *bench.*]

Law: The right which a widow has in her husband's copyhold lands, corresponding to dower in the case of freeholds.

* **freē'-boôt, * free-boote,** *s.* [FREEBOOTER.] Robbery.

"Lined themselves upon *freeboote*."—*Stapylton: Juvenal*, sat. viii. 124. (Note.)

freē'-boôt-ẽr, *s.* [Dut. *vrijbuiter*; Ger. *freibeuter.*] One who wanders about for the sake of plunder; a pillager, a plunderer, a robber.

"The *freebooter* was exalted into a hero of romance."—*Macaulay: Hist. Eng.*, ch. xiii.

* **freē'-boôt-ẽr-ȳ,** *s.* [Eng. *free*; *-bootery.*] The act, practices, or occupation of a freebooter; plunder taken by a freebooter.

† **freē'-boôt-ĭng,** *s. & a.* [Eng. *free*; *boot(y)*; *-ing.*]

A. *As subst.:* The act of plundering or pillaging; freebootery.

"William spoke strongly to him about the *freebooting* which was the disgrace of the colonies."—*Macaulay: Hist. Eng.*, ch. xxv.

B. *As adj.:* Following the profession of a freebooter; plundering, pillaging.

* **freē'-boôt-ȳ,** *s.* [Eng. *free*, and *booty.*] Plunder or pillage by freebooters; freebootery.

freē'-born, *a.* [Eng. *free*, and *born.*] Born in a state of freedom; inheriting liberty; not a slave by birth.

"She caught the last—
Last glorious drop his heart had shed,
Before its *freeborn* spirit fled!"
Moore: Paradise & the Peri.

* **freē'-çhăp-ęl,** *s.* [Eng. *free*, and *chapel.*] A chapel founded by the king, and by him exempted from the jurisdiction of the ordinary. The king may also license a subject to found such a chapel, and by his charter exempt it from the ordinary's visitation.

* **freē'-cost,** *s.* [Eng. *free*, and *cost.*] Freedom from cost, charge, or expenses.

"To hate and despise the absurdity of being kind upon *freecost*, as not so much as to tell a friend what it is o'clock for nothing."—*South.*

freed, *pa. par.* or *a.* [FREE, *v.*]

* **freē'-dĕn-ĭ-zęn,** *s.* [Eng. *free*, and *denizen.*] A free citizen or denizen of a city or town. [*Freedom of a city.*]

* **freē'-dĕn-ĭ-zęn,** *v.t.* [FREEDENIZEN, *s.*] To make a denizen or citizen; to make free of a city.

"No worldly respects can *freedenizen* a Christian here, and of *peregrinus* make him *civis.*"—*Bp. Hall.*

freēd'-măn, *s.* [Eng. *freed*, and *man.*] A man born a slave and manumitted.

"The *freedman* jostles, and will be preferred:
First come, first served, he cries."
Dryden: Juvenal, sat. i.

freē'-dôm, * freo-dom, * fre-dom, * fre-dome, * free-dam, *s.* [A.S. *freódóm*; O. Fris. *frídóm*; Dut. *vrijdom.*]

1. The state of being free; liberty; exemption from servitude, confinement, or restraint.

2. Exemption from subjection to any power; independence.

"The last of Lambro's patriots there
Anticipated *freedom* share."
Byron: Bride of Abydos, ii. 20.

3. Power or liberty of enjoying franchises or privileges.

"This prince first gave *freedom* to servants, so as to become citizens of equal privileges with the rest, which very much increased the power of the people."—*Swift.*

4. Exemption from restraint; license.

"I will that all the feasts and sabbaths shall be all days of immunity and *freedom* for the Jews in my realm."—1 *Maccabees* x. 34.

5. Exemption from necessity, fate, or any constraining power or influence.

"In this then consists *freedom*—viz. in our being able to act or not to act, according as we shall choose or will."—*Locke: On Human Understanding*, bk. ii., ch. xxi.

6. Privileges, franchises, immunities.

"Let the danger light
Upon your charter and your city's *freedom.*"
Shakesp.: Merchant of Venice, iv. 1.

7. License; excess; violation of the rules of good-breeding; a liberty.

8. Ease or facility in doing anything: as, He draws with *freedom.*

* 9. A free unconditional grant.

¶ For the difference between *freedom* and *liberty*, see LIBERTY.

¶ *Freedom of a city:* Immunity from county jurisdiction, and the privilege of corporate taxation and self-government held under a charter from the Crown. This freedom is enjoyed of right, subject to the provisions of the charter, and is often conferred as an honour on princes and other distinguished individuals. The freedom of a city carries the parliamentary franchise.

freedom-fine, *s.* A payment made on being admitted to the *freedom* of a city, guild, or incorporation.

* **freed-stool,** *s.* [FREDSTOLE.]

freē'-fĭsh-ẽr, freē-fĭsh'-ẽr-man, *s.* [Eng. *free*, and *fisher*, *fisherman.*] One who has an exclusive right to fish in certain waters.

"Who are your lordship's *freefishermen.*"—*C. Kingsley.* (*Webster.*)

* **freē'-fĭsh-ẽr-ȳ,** *s.* [Eng. *free*, and *fishery.*] *Law:* The exclusive right of fishing in certain waters. It was a crown franchise and forbidden by Magna Charta and its confirmations.

* **freē'-foọt-ĕd,** *a.* [Eng. *free*, and *footed.*] Not restrained in marching.

"We will fetters put upon this fear,
Which now goes too *freefooted.*"
Shakesp.: Hamlet, iii. 3.

freē'-hand, *a.* [Eng. *free*, and *hand.*] Executed with the hand alone, without instruments: as, *freehand* drawing.

"The study and practice of *freehand* drawing gives accuracy to the eye, and refines the perceptive faculties."—*Cassell's Technical Educator*, i. 48.

freē'-hand-ĕd, *a.* [Eng. *free*; *hand*; *-ed.*] Open-handed, free, generous, liberal.

"He was as *freehanded* a young fellow as any in the army."—*Thackeray.* (*Ogilvie.*)

freē'-heart-ĕd, *a.* [Eng. *free*, and *hearted.*]

1. Open, frank, unreserved.

"Love must *freehearted* be and voluntary;
And not enchanted, or by fate constrained."
Davies.

2. Free, liberal, generous, bounteous.

"In that mansion used to be
Freehearted Hospitality."
Longfellow: Old Clock on the Stairs.

freē'-heart-ĕd-lȳ, *adv.* [Eng. *freehearted*; *-ly.*] In a freehearted, liberal, or open manner; frankly; liberally.

freē'-heart-ĕd-nĕss, *s.* [Eng. *freehearted*; *-ness.*] The quality of being freehearted; liberality; frankness.

freē'-hōld, *s. & a.* [Eng. *free*, and *hold.*]

A. *As substantive:*

Law: An estate or real property held in fee-simple or fee-tail; the tenure by which such an estate is held. Anciently it was one of the two chief tenures known as tenure in free socage, and was the only free method for laymen to hold property. During feudal times the freeholder had to render some small services of an honourable kind: now these are abolished. A freehold estate must possess immobility, in other words must consist either of land or of some interest arising out of land annexed to it. Secondly, it must be of indeterminate duration.

"No alienation of lands holden in chief should be available, touching the *freehold* or inheritance thereof, but only where it were made by matter of record."—*Bacon: Office of Alienation.*

B. *As adj.:* Held in fee-simple or fee-tail; of the nature of a freehold.

"He determined, therefore, to postpone for a short time the confiscation of the *freehold* property of refractory clergymen."—*Macaulay: Hist. Eng.*, ch. vi.

freē'-hōld-ẽr, *s.* [Eng. *freehold*; *-er.*]

1. *Eng. Law:* The possessor of a freehold.

"The main strength of the opposition lay among the small *freeholders* in the country, and among the merchants and shopkeepers of the towns."—*Macaulay: Hist. Eng.*, ch. i.

2. *Scots Law:* Formerly a person holding of the crown, but now applied to all who, before the passing of the Reform Bill of 1832, had a property qualification entitling them to vote for or be elected members of parliament.

* **free-lac, * freo-lac,** *s.* [A.S. *freólác.*] Freeness, frankness.

"Edmodnesse and thelemodnesse and *freolac* of heorte."—*Ancren Riwle*, p. 40.

freē'-lĭv-ẽr, *s.* [Eng. *free*, and *liver.*] One who lives freely and highly; one who indulges his appetites.

freē'-lĭv-ĭng, *a. & s.* [Eng. *free*, and *living.*]

A. *As adj.:* Living freely or highly; given to indulgence of the appetites.

B. *As subst.:* Indulgence of the appetites.

* **freel-tee,** *s.* [FRAILTY.]

freē'-lȳ, *adv.* [A.S. *freólice*; M. H. Ger. *vrîliche.*] [FREE, *a.*]

1. In a free manner or state; with full liberty, without dependence.

2. Without restraint or hindrance.

"Thou shalt live as *freely* as thy lord."
Shakesp.: Twelfth Night, i. 4.

3. Plentifully, copiously; to excess.

"You would drink *freely.*"
Shakesp.: 2 Henry IV., iv. 2.

4. Without sample or reserve; openly, frankly.

"To tell men *freely* of their foulest faults."—*Dryden: Essay upon Satire.*

5. With full licence; at one's own will or discretion.

"To eat acorns with swine, when we may *freely* eat wheat-bread among men."—*Ascham: Scholemaster.*

6. Voluntarily, willingly, readily; of one's own accord.

7. Honestly, sincerely, heartily, gladly.

"That noble lady
Or gentleman that is not *freely* merry,
Is not my friend." *Shakesp.: Henry VIII.*, i. 4.

8. Frankly, liberally; without cost or charge.
"*Freely* ye have received, *freely* give."—*Matt.* x. 8.

freē'-mạn, * fre-man, * freo-man, *s.* [Eng. *free*, and *man*.]

1. One who is free; one who is not a slave, vassal, or dependant; one who enjoys liberty.
"And brought the *freeman's* arm to aid the *freeman's* laws." *Scott: Marmion*, i. (Introd).

* 2. One who has been freed; a freedman.

3. One who has been admitted or is entitled to a franchise or particular privilege, immunity, or right.
"What this union was is expressed in the preceding verse, by their both having been made *freemen* on the same day."—*Addison.*

freemen's roll, *s.* A roll upon which the names of those who have been admitted to the freedom of a town or city are inscribed.

freē'-măr-tĭn, *s.* [Etym. doubtful.]
Physiol.: A cow-calf born as a twin with a bull-calf, which in this case has all the parts of a perfect animal; whilst the cow-calf is a hermaphrodite and barren. [Cow-calf.]

freē-mā'-sŏn, *s.* [Eng. *free*, and *mason*.] A member of a society for the promotion of freemasonry.

freē-mạ-sŏn'-ĭc, *a.* [Eng. *freemason*; *-ic*.] Of or pertaining to freemasonry; resembling freemasonry.

freē-mā'-sŏn-rỹ, *s.* [Eng. *free*, and *masonry*.] An association of "free and accepted masons," a secret society, the more extravagant friends of which claim for it an antiquity extending back to the building of Solomon's Temple, if not even to the time when the Tower of Babel was erected. It is said that it was introduced into England about A.D. 676, that the Grand Lodge at York was founded in 926, and freemasonry was introduced into Scotland in 1140. Some, regarding at least the earlier of these dates as imaginary, allege that it did not come into existence till about the time of the Crusades; and that when it arose, it was simply the masonic guild, or, as it would now be called, trades' union. As the masons moved from place to place seeking employment upon cathedrals, abbeys, or other ecclesiastical edifices then being erected, they had secret signs by which they recognised each other, and proved that that they were real proficients in the art which they preferred and not mere pretenders.

At first the Church looked on the Society with favour, but ultimately became unfriendly. In 1424 it was prohibited by the Act 3 Henry VI., c. 1, which, however was never enforced. It is said that freemasonry did not take root in France till the sixteenth century. The Grand Lodge of England was founded in 1717, that of Ireland in 1730, and that of Scotland in 1736. A knowledge of ordinary masonry is not now requisite to membership. Though the Society still lays foundation stones with full masonic honours, yet its professors do not so much profess architectural skill as virtue and benevolence. In this country princes do not feel it beneath them to accept the highest dignities of the Society. Abroad it is less popular. In 1738, the Pope published a bull of excommunication against freemasons, and freemasonry was included among the errors condemned by the Syllabus in 1864.

* **freē'-mĭnd-ĕd,** *a.* [Eng. *free*, and *minded*.] Having the mind free from care, trouble, or perplexity; without care or trouble.
"To be *freeminded*, and cheerfully disposed at hours of meat, sleep, and exercise, is one of the best precepts of long lasting."—*Bacon.*

1. The quality or condition of being free or at liberty; freedom, liberty.

2. Openness, candour, unreservedness, frankness.
"*Freenesse* of speech is when we speake boldly and without feare euen to the proudest of them."—*Wilson: Arte of Rhetorique*, p. 202.

3. Generosity, liberality, bounty.
"I hope it will never be said that the laity, who by the clergy are taught to be charitable, shall in their corporations exceed the clergy itself, and their sons, in *freeness* of giving."—*Sprat.*

frē'-ĕr, *s.* [Eng. *free*, v.; *-er*.] One who frees, sets free, or delivers; a liberator, a deliverer.
"Bacchus, thou art *freer*
Of cares and overseer."
Ben Jonson: Ipedic. of King's Letter.

freē'-schoôl, *s.* [Eng. *free*, and *school*.]

1. A school endowed or supported by funds, in which pupils are taught without charge.
"If there were a possibility of having even our *free-schools* kept a little out of town."—*Goldsmith: The Bee*, No. 4.

2. A school to which pupils are admitted without restriction.

* **freē'-shĭp, * fre-shipe, * fre-scipe,** *s.* [A.S. *freóscipe*.] Freedom.

freē'-thĭńk-ĕr, *s.* [Eng. *free*, and *thinker*.] A name often assumed by those who, disbelieving in revelation, feel themselves free to adopt any opinion in religious or other matters which may result from their own independent thinking. The name was specially claimed by those who in the seventeenth and eighteenth centuries took part on the antichristian side in the Deistic Controversy—viz., Lord Herbert of Cherbury, Toland, Lord Shaftesbury, Collins, Woolaston, Tindal, and Viscount Bolingbroke. The word Freethinker occurs in a letter about Toland, from Mr. Molyneux to Locke, on April 6, 1697; and a work published by Anthony Collins, in 1713, is called *A Discourse on Freethinking*.

freē'-thĭńk-ĭńg, *s. & a.* [Eng. *free*, and *thinking*.]

A. *As subst.:* Unbelief, scepticism; the adoption of the principles of a freethinker (q.v.).

freight (as **frāt**), * **fraight, * fraght, * fraughte, * freyt, * freythe,** *s.* [A later form of *fraught* (q.v.); Dut. *vracht*; Sw. *frakt*; Dan. *fragt*; O. H. Ger. *freht, freit*; Port. *frete* = a cargo.]

1. That with which a ship is loaded; a load, a cargo.
"All gaily decked in gorgeous state,
Sailed a proud barge of richest *freight*."
Lloyd: Arcadia.

2. The money due or paid for the transportation of goods.
"They rather desired to lose wages, *fraight*, and all, than continue and follow such desperate fortunes."—*Hacklyt: Voyages*, vol. iii., p. 87.

3. A load, or cargo.
"You sail . . . wafts the royal youth,
A *freight* of future glory to my shore."
Thomson: Britannia, 12.

¶ Crabb thus discriminates between *freight*, *cargo*, *burden*, and *lading*: "A captain speaks of the *freight* of his ship as that which is the object of his voyage, by which all who are interested in it are to make their profit; the value and nature of the *freight* are the first objects of consideration: he speaks of the

lading as the thing which is to fill the ship; the quantity and weight of the *lading* are to be taken into the consideration: he speaks of the *cargo* as the thing which goes with the ship, and belongs as it were to the ship; the amount of the *cargo* is that which is first thought of: he speaks of the *burden* as that which his vessel will bear; it is the property of the ship which is to be estimated. The ship-broker regulates the *freight:* the captain and the crew dispose the *lading:* the agent sees to the disposal of the *cargo:* the ship-builder determines the *burden:* the carrier looks to the *load* which he has to carry." (*Crabb: Eng. Synon.*)

French-sardine, *s.* A young pilchard.

French School, *s.*

Paint.: This school has been so different under different masters, that it is difficult to characterize it. Some of its artists have been formed on the Florentine and Lombard styles, others on the Roman, others on the Venetian, and a few of them have distinguished them-

selves by a style which may be called their own. Speaking in general terms of this school, it appears to have no peculiar character, and can only be distinguished by its aptitude to imitate easily any impressions; and it may be added, speaking still in general terms, that it unites in a moderate degree the different parts of the art, without excelling in any one of them. Modern French artists have especially excelled as painters of the nude figure.

French sixth, *s.*

* 1. To crowd, to fill.
"Watering the ground and with our sighs the air
Frequenting." *Milton: P. L.,* x. 1,091.
2. To visit or resort to frequently or habitually.
"Christians, of course, did not *frequent* such places in St. Augustine's time."—*Tylor: Early Hist. Mankind,* ch. iii.
¶ Crabb thus discriminates between to *frequent,* to *resort* to, and to *haunt:* "*Frequent* is more commonly used for an individual who often goes to a place; *resort* and *haunt* for a number of individuals. A man is said to *frequent* a public place; but several persons may *resort* to a private place. *Frequent* and *resort* are indifferent actions; but *haunt* is always used in a bad sense." (*Crabb: Eng. Synon.*)

* **frē-quĕnt'-ą-ble,** *a.* [Eng. *frequent; -able.*] Accessible.

Prior: Hans Carvel.
* 2. A cool, refreshing drink, or liquor.
3. A painting executed by the process described under II.
"His *frescos* not pleasing he returned to Rome."—*Walpole: Anecdotes of Painting,* vol. i., ch. viii.
II. *Art:* A kind of painting performed on fresh plaster, or on a wall covered with mortar not quite dry, and with water-colours. The plaster is only to be laid on as the painting proceeds, no more being done at once than the painter can despatch in a day. The colours, being prepared with water, and applied over plaster quite fresh, become incorporated with the plaster, and retain their beauty for a great length of time. The art, which is employed generally for large pictures on walls or ceilings, was understood by the ancients. The Romans cut out plaster paintings on brick walls at Sparta, packed them up in wooden cases, and transported them to Rome. Fresco painting was first made of real importance by the Italians, in the sixteenth century. It is a very common error in this country with antiquaries and writers in general to term the ancient paintings frequently found on church walls, &c., *frescoes;* but there is scarcely an instance of a genuine *fresco* among them. They are distemper paintings on plaster, and quite distinct in their style, durability, and mode of manipulation. (*Weale, Fairholt,* &c.)

frĕs'-cō, *v.t.* [FRESCO, *s.*] To paint or decorate in fresco, as walls.

frĕsh, * **fresch,** * **freshe,** * **freche,** * **fressche,** * **fressh,** * **fersch,** * **fersch,** * **fresse,** * **freasche,** *a., adv.,* & *s.* [A.S. *fersc;* cogn. with Dut. *versch;* Sw. *frisk;* Dan. *fersk, frisk;* Icel. *ferskr* = fresh, *friskr* = frisky, brisk; Ger. *frisch;* M. H. Ger. *vrisch, virsch;* O. H. Ger. *frisg;* Ital., Sp., & Port. *fresco;* O. Fr. *fres, freis;* Fr. *frais, fraîche.*] [FRISK.]

1. A freshet; a stream or spring of fresh water.

"I'll not show him
Where the quick *freshes* are."
Shakesp.: Tempest, iii. 2.

2. A flood; an inundation; an overflowing.

"The *freshes*, when they take their ordinarie course of ebbe, doe grow strong and swift."—*Hacklyut: Voyages*, iii. 673.

3. A day of open weather; a thaw; open weather.

4. (*Pl.*): The minglings of fresh and salt water in bays or rivers; the increased current of an ebb-tide caused by a flood of fresh water flowing into the sea. (*American.*)

¶ Crabb thus discriminates between *fresh*, *new*, and *recent*: "The *fresh* is properly opposed to the stale, as the *new* is to the old: the *fresh* has undergone no change: the *new* has not been long in being. Meat, beer, and provisions in general, are said to be *fresh*: but that which is substantial and durable, as houses, clothes, books, and the like, are said to be *new*. *Recent* is taken only in the improper application; the other two admit of both applications in this case: the *fresh* is said in relation to what has lately preceded; *new* is said in relation to what has not long subsisted; *recent* is used for what has just passed in distinction from that which has long gone by." (*Crabb: Eng. Synon.*)

¶ Obvious compounds: *Fresh-blowing, fresh-blown, fresh-coloured, fresh-washed, fresh-looking, &c.*

"The nobility, as *freshwater* soldiers which had never seen but some light skirmishes, made light account of the Turks."—*Knolles: Historie of the Turkes.*

freshwater-formation, *s.*

Geol.: A stratum or a series of strata dedeposited in freshwater. If this is done by a river they are fluviatile; if by a lake they are lacustrine. Most freshwater strata belong to the latter category. In such a stratum, there are no echini, no corals and no foraminifera. There are probably shells few in species, but abundant in individuals, of forms like those of modern freshwater or land shells. All univalve shells of land and freshwater species, except *Melanopsis*, the aperture of which is distinctly notched, and *Achatina*, which has a slight indentation, have entire mouths. Of bivalves none but those with two muscular impressions are freshwater; if a shell with a single impression be found, the stratum is almost certainly marine. Freshwater strata are generally more limited in area than those deposited in the sea. (*Lyell.*)

freshwater-mussels, *s. pl.*

Zool.: A name for the mollusca of the family Unionidæ (q.v.).

freshwater-shrimp, *s.*

frĕs-ĭ'-sōn, *s.* [A word of no etymology.]

Logic: An arbitrary name for a mode in the fourth figure of syllogisms, in which figure the Middle Term is the predicate of the Major and the subject of the Minor Premiss. Taking X to represent the Major Term, Y the Minor, and Z the Middle, a syllogism in Fresison would stand thus:

(frEs) No X is Z.
(I) Some Z is Y.
(sOn) ∴ Some Y is not X.

That is, from a Universal Negative and a Particular Affirmative, a Particular Negative is arrived at.

frĕt (1), * **frete,** * **fret-en,** * **freet-en,** *v.t. & i.* [A.S. *fretan* (pa. t. *fræt*), a contraction

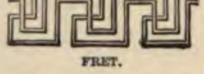
2. A machine mounted on a stand with a treadle to give the reciprocating motion to the gig-saw.

frĕt (3), *s.* [O. Fr. *frete* = a ferrule; *freter* = to cross, to interlace.]



FRET.

1. *Arch.:* An ornament formed by small bands or fillets, intersecting each other at right angles, used in classical architecture. It is susceptible of many modifications, and is still often employed.

2. *Her.:* A bearing composed of bars crossed and interlaced.

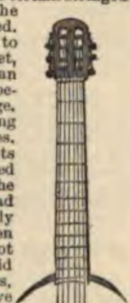
* **frĕt** (4), *s.* [Lat. *fretum* = a strait, a channel.] A channel.

FRET.

"We first advertise, it [Euripus] generally signifieth any strait, *fret*, or channel of the sea, running between two shores."—*Browne: Vulgar Errours*, bk. vii., ch. xiii.

frĕt (5), *s.* [Etym. doubtful; perhaps a particular use of O. Fr. *frete* = a ferrule.] [Fret, (3), *s.*]

Music: A small piece of wood or ivory placed upon the finger-board of certain stringed instruments, to regulate the pitch of the notes produced. By pressing the string down to the finger-board behind a fret, only so much of the string can be set in vibration as lies between the fret and the bridge. Frets are, therefore, nothing more or less than little bridges. The Egyptian lutes had frets made of camel-gut, tied or glued round the finger-board. All the viols contained in a chest had frets, and some of the early forms of the violin were even furnished with them. But not only do they prevent the rapid fingering of difficult passages, but they also entirely deprive the violin of one of its most charming qualities, that of slurring or *portamento*, an attempt to produce which will, on a fretted instrument, result in a well-defined chromatic scale. Another reason for the abandonment of fretted violins was that, in extreme keys, the intervals could not be tempered.



FRET OF GUITAR.

"I did but tell her she mistooke her *frets*. . . .
Frets call you these? (quoth she) I'le fume with them:
And with that word she stroke me on the head."

Your manly genius, a mere *fribble.*"
Lloyd: On Rhyme.

***frĭb'-ble,** *v.i. & t.* [From Central Fr. *friboler* = to flutter, flit to and fro without fixed purpose like a butterfly. (*Wedgwood.*) For *fripple*, from O. Fr. *fripper* = to rub up and down (*Skeat.*).]

A. *Intransitive:*

1. To trifle; to act frivolously.

"Though cheats, yet more intelligible,
Than those that with the stars do *fribble.*"
Butler: Hudibras, pt. ii., c. iii.

2. To totter.

"How the poor creature *fribbles* in his gait."—*Tatler*, No. 49.

B. *Transitive:*

1. To do or utter in a frivolous, trifling manner.

"And what is worse, they speak but
What they list of it, and *fribble* out the rest."
Middleton: Mayor of Quinborough, v. i.

2. To frizzle.

"The mistress said to me, the minister had a block-head whereon he was wont to dress and *fribble* his wig."—*The Steam-boat*, p. 297.

frĭb'-blẽr, *s.* [Eng. *fribbl(e)*, v.; *-er.*] A trifler; a fribble.

"A *fribbler* is one who professes rapture and admiration for the woman to whom he addresses, and dreads nothing so much as her consent."—*Steele: Spectator*, No. 288.

***frī'-bŏrg, *free-borg, fri-burgh,** *s.* [A.S. *frēoborh, friborh*, from *frio, fri* = free, and *borh* = a pledge, security.]

Old Law: The same as FRANKPLEDGE (q.v.).

"As touching the king's peace, every hundred was divided into many *freeborgs* or tithings consisting of ten men, which stood all bound one for the other; and did amongst themselves punish small matters in their court for that purpose called the lete."—*Spelman: Ancient Government of England.*

***frĭc'-āçe, *fric-a-sie, *fric-a-cy,** *s.* [FRICASEE.]

1. The act of rubbing.

"You make them smooth and sound
With a bare *fricace* of your medicine."
Ben Jonson: Alchemist, iii. 2.

2. Meat sliced and dressed with strong sauce.

"Their stinking cheese, and *fricacy* of frogs."
King: Art of Cookery.

frĭ-can-deau' (deau as dō), *fri-can-del, *fri-can-do, *s.* [O. Fr. *fricandel;* Fr. *fricandeau.*]

Cook.: A dish prepared of veal, spices, &c.

frĭc-as-seē', *s.* [Fr. *fricassée*, pa. par. fem. sing. of *fricasser* = to fricassee, from Lat. *frico* = to rub; Sp. *fricasé;* Port. *fricassé;* Ital. *fricassea.*]

Cook.: A dish made by cutting chickens or other small animals into pieces, and dressing them in a frying-pan or similar vessel with strong sauce.

"Soups and olios, *fricassees* and ragouts."—*Swift: Tale of a Tub*, § 7.

frĭc-as-seē', *v.t.* [FRICASSEE, *s.*]

1. *Literally:*

Cook.: To dress in manner of a fricassee.

*2. *Fig.:* To mince finely and disguise under some strong cover.

"Common-sense and truth will not down with them unless they be hashed and *fricassed.*"—*Echard: Observations* (1696), p. 63.

***frĭ-cā'-tion,** *s.* [Lat. *fricatio*, from *fricatus*, pa. par. of *frico* = to rub; Sp. *fricacion.*] The act of rubbing one thing against another; friction.

"The like, saith Jorden, we observe in canes and woods, that are unctuous and full of oyle, which will yield fire by *frication* or collision."—*Browne: Vulgar Errours*, bk. iii., ch. xxi.

frĭc'-a-tĭve, *s. & a.* [Lat. *fricatus*, pa. par. of *frico* = to rub.]

A. *As substantive:*

Philol.: A term applied to certain letters, as *f, v, s, z*, &c., produced by the friction of the breath issuing through a narrow opening of the organs of articulation.

"Next to the mutes in regard to degree of closure are the class of so-called *fricatives*, defined as containing a rustling or friction of the breath through a narrowed aperture as their main element."—*Whitney: Life & Growth of Language*, p. 64.

B. *As adj.:* Produced by the friction of the breath issuing through a narrow opening.

"The cavity may be so narrowed, at one and another point, that the friction of the breath, as driven out through the aperture, forms the conspicuous element in the audible product; this, then, is a sound of very different character, a *fricative* consonant."—*Whitney: Life & Growth of Language*, p. 61.

***frĭc'-a-trĭçe,** *s.* [Lat. *frictrix.*] A harlot.

frĭc'-kle, *s.* [Etym. doubtful.] A bushel-basket.

frĭc'-tion, *s. & a.* [Fr., from Lat. *frictio*, from *frictus* = a contract. pa. par. of *frico* = to rub.]

A. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

(1) The act of rubbing two bodies together; the act of rubbing one body with another.

"*Frictions* make the parts more fleshie, and full, as we see both in men, and in the currying of horses, &c."—*Bacon: Natural History*, § 877.

(2) In the same sense as II.

2. *Fig.:* A slight disagreement or diversity of opinions; an absence or loss of smoothness in the relations between two parties.

"The causes of complaints which have been so frequent of late, and which indicate a very undesirable amount of *friction* between English captains and shipping agents and the local staff."—*Daily Chronicle*, July 17, 1883.

II. *Physics:* The resistance which any body meets with in moving over another body. No body is quite smooth, all have elevations and depressions, and when one moves over another some of the projecting points of the one are sure to enter the cavities of the other, and render movement more difficult. Friction is greater when a body previously at rest first begins to move. A horse which finds a difficulty in getting a heavy cart well in motion, owing to inertia largely produced by friction, will draw it without symptoms of distress when it has been for some time started. The larger and heavier the body the greater the friction. Friction is a retarding force in nature. It gives stability to bodies which else would be easily moved. It generates heat, and is one of the chief means of developing electricity. [FRICTIONAL ELECTRICITY.]

¶ *Coefficient of friction for two surfaces:*

Physics: The rates or proportions between the force required to move one of these surfaces over the other, and the pressure between the two surfaces.

B. *As adj.:* Pertaining to or implying friction; frictional.

friction-balls, *s. pl.* Properly, anti-friction balls. Balls placed beneath a traversing object to relieve friction. Some forms of swing-bridges are thus supported.

friction-block, *s.* A block of wood pressing tightly on to any revolving body, so as to cause friction.

friction-brake, *s.*

Mech.: A form of dynamometer invented by Prony, in which a pair of friction-blocks are screwed to a journal rotating at a given speed, and tightened to such an extent that the unweighted lever will remain horizontal between the studs.

friction-clutch, *s.*

Mach.: A device for connecting two shafts by bringing a piece on one shaft into contact with a piece of another shaft, which revolves with such force that the former partakes of the motion of the latter. It consists of a shell or box fixed on the end of a driving-shaft, fitted by a conical piece which slides on a feather or raised part of the end of another shaft, so that it can be engaged at pleasure by the cone being forced into the shell by a lever or screw. This apparatus is very useful for driving machines, the parts of which are subject to violent strains, as the pressure upon the clutch can be regulated so as to allow it to slip when the strain is abnormal.

friction-cones, *s. pl.*

Mach.: A form of friction-coupling in which the connecting portions have respectively a conical disc and a hollow cone, which become frictionally adherent by contact.

friction-coupling, *s.*

Mach.: [FRICTION-CLUTCH].

friction-gear, friction-gearing, *s.*

Mach.: Wheels for transmitting power by means of parallel ridges or teeth of the driver on the rims which gear into corresponding grooves on the follower. They are very convenient for use in machines that require to be put in or out of gear rapidly; compressed masses of paper are also used as frictional driving surfaces.

friction-hammer, *s.*

Mach: A hammer deriving its name from its being lifted by means of the friction of revolving rollers, which nip the hammer-rod.

friction-powder, *s.* [FRICTION-PRIMER.]

friction-primer, *s.*

Ord.: A small brass tube filled with gunpowder, and having a smaller tube containing friction composition inserted at right angles near the top. The composition is ignited by means of a roughed wire inserted in the smaller tube, which is rapidly drawn out by a lanyard having a hook at the end. The composition consists of two parts sulphuret of antimony and one part chlorate of potassa, moistened with gum water and dried.

friction-pulley, *s.*

Mach.: [FRICTION-CLUTCH].

friction-rollers, *s. pl.*

Mach.: A bearing formed of two rollers, whose circumference supports a rotating axle instead of a bush or block, in order to substitute the friction of rolling for that of sliding, which is considerably less for similar pressure. Similarly, cylinders, or round logs, are commonly placed under heavy weights, which have to be moved any short distance along the ground, so as to diminish the friction.

friction-tube, *s.*

Ord.: A tube containing a composition which is ignited by friction, and which is placed in the vent of a gun to fire the charge when the lanyard is pulled. [FRICTION-PRIMER.]

friction-wheel, *s.*

Mach.: A wheel, the motion of which is caused by the friction of a moving body, or, conversely, which communicates motion to a body by frictional contact. In one variety, one wheel being driven becomes a motor to the other, their perimeters being in contact. The surface is usually clothed with leather, rubber, or some sufficiently elastic material which does not polish too readily, and thus induce slipping. By grooving the perimeters of the wheels, the contact may be made more intimate, as the surface engaged is increased, and the elastic material of the respective faces caused to bind. In another form a collar fastened to the central shaft has four pivoted arms. When the rim turns in one direction, the arms turn on their pivots, leaving the rim and failing to transfer the motion to the shaft. When the rim turns in the contrary direction, the arms catch against it and are rotated by the contact, turning the shaft also. Another form has an upper india-rubber wheel with a V-edge, clamped between two metallic plates. By screwing up the nut which holds the parts together, the disc is made to expand radially, and thus increase the tractive power on the lower driving-wheel. The term friction-wheel is often, but erroneously, applied to wheels which diminish friction; these are properly called anti-friction wheels.

frĭc'-tion-al, *a.* [Eng. *friction*; *-al.*] Of or pertaining to friction; produced by or resulting from friction.

frictional electricity, *s.*

Elect.: Electricity developed by rubbing bodies, as distinguished from dynamic electricity, that developed by means of a voltaic pile or battery. [ELECTRICITY.] (*Ganot.*)

frictional-gearing, *s.* [FRICTION-GEAR.]

Frictional-gearing-wheels:

Mach.: [FRICTION-WHEEL].

frĭc'-tion-al-lȳ, *adv.* [Eng. *frictional*; *-ly.*] As regards friction.

frĭc-tion-lĕss, *a.* [Eng. *friction*; *-less.*] Free from or without friction.

Frī'-daȳ, *s.* [A.S. *Frige dæg* = Friga's day, Friday; Icel. *Frjadagr*; Dan. & Sw. *Fredag*; Dut. *Vrijdag*; Ger. *freitag*; O. H. Ger. *Friatag.*]

Calendar: The sixth day of the week, dedicated by the Scandinavians, the Anglo-Saxons and others to the goddess Friga (q.v.). It is remarkable that in India the corresponding day is dedicated not to a god, but to a goddess, corresponding to Venus.

* **friday-faced,** *a.* Mortified, melancholy.

"What a *friday-faced* slave it is!"—*Wily Beguil'd.*

* **frĭdġe** (1), *v.t.* [Etym. doubtful.] To rub, to fray.

"You might have *fridged* the outside of them all to pieces."—*Sterne: Tristram Shandy*, ii. 116.

* **frĭdġe** (2), *v.i.* [Etym. doubtful; probably from A.S. *frician* = to dance, or connected with *freak* (q.v.).] To move hastily or rapidly; to dance about.

"The little motes or atoms that *fridge* and play in the beams of the sun."—*Halliwell: Melamprovœa.*

* **frĭd-stōle,** *s.* [FREDSTOLE.]

fried, *pa. par.* or *a.* [FRY, *v.*]

fried-chickens, *s.* Chicken broth with eggs dropped in it, or beaten up and mixed with it.

friĕnd, * **frend,** * **frende,** * **freond,** *s.* [A.S. *freónd*, orig. the pr. par. of *freón*, *freógan* = to love; cogn. with Dut. *vriend*; Ger. *freund*; O. H. Ger. *fruint*; Goth. *frijonds* = a friend; Icel. *frændi*; Da. *frænde*; Sw. *frände* = a kinsman.]

1. An intimate acquaintance or associate; one who is attached to another by sentiments of affection, respect, and esteem.

"Want gives to know the flatterer from the *friend.*"
Dryden: Wife of Bath's Tale, 486.

2. A near relation, more particularly a parent.

"She is promised by her *friends* unto a gentleman."
Shakesp.: Two Gentlemen of Verona, iii. 1.

3. One not hostile; one of the same nation, party, or kin; a supporter or companion in arms.

"'Who comes so fast in silence of the night?'
'A *friend.*'" *Shakesp.: Merchant of Venice*, v. 1.

4. One who is reconciled with another. (Followed by *with.*)

"And *friends* with Cæsar."
Shakesp.: Antony & Cleopatra, ii. 5.

5. A companion; an associate; an attendant.

"It stood upon the choice of *friends.*"
Shakesp.: Midsummer Night's Dream, i. 1.

* 6. A lover, a paramour, a sweetheart.

7. One who is favourable, supports or promotes a cause, object, or institution; a favourer; a suporter; a promoter.

"Aurora riding upon Pegasus sheweth her swiftness, and how she is a *friend* to poetry and all ingenious inventions."—*Peacham.*

8. A term of familiar address or salutation.

"*Friend*, how camest thou in hither."—*Matt.* xxii. 12.

9. A Quaker; a member of the society of Friends. [¶ (4).]

¶ (1) *A friend in* or *at Court:* One who has influence in any quarter to help another in time of need.

"A *friend i' the Court* is better than a penny in purse."—*Shakesp.: 2 Henry IV.*, v. 1.

(2) *Friends of God:*

Ecclesiol. & Ch. Hist.: A sect which flourished in Germany and Switzerland in the fourteenth century. It was a secret unorganized brotherhood for the cultivation of spiritual religion.

(3) *Friends of the People:*

Hist.: A society formed in London in 1792 to advocate reform.

(4) *Society of Friends:*

Ecclesiol. & Ch. Hist.: A religious sect, better known as Quakers, which, however, is a nickname. [QUAKER.] Their founder was George Fox, an illiterate man, but of considerable natural ability, born at Drayton in Leicestershire in July, 1624. He was apprenticed to a shoemaker, but could not settle steadily down to any secular occupation, the whole bent of his mind being towards religion. In 1647, at the age of twenty-three, he first began to preach independently of all other denominations, and by the following year had gained many adherents. When he went to the church of an ordinary clergyman, he had at first no scruple in rising to correct what he deemed erroneous in the doctrine of the preacher. Three instances of this are recorded, all of date 1649. In later years Fox did not disturb public worship. He professsed to be commanded by the Lord not to use the ordinary forms of salutation, and to substitute "thee" and "thou" for the more courteous "you" in conversation. He deemed it sinful to take oaths (those of supremacy and allegiance, for instance), or to pay or sanction the payment by his followers of tithes, and thus naturally encountered vehement hostility from both the civil and ecclesiastical authorities. The rougher section of the common people were also his foes. But he unflinchingly propagated his opinions in England, on the continent of Europe, and in America till his death, on Jan. 13, 1691. The Friends, like their originator, had much to suffer, and nobly bore their trials. In the reign of Charles II., Robert Barclay, a Scotch knight, was a zealous follower of Fox. In that of James II., William Penn, the founder of what may be called the Quaker state of Pennsylvania, with its capital, Philadelphia, high in the favour of the king, procured them some toleration. After the Revolution of 1688 the sect was not molested, and by 7 & 8 William III., c. 34, were allowed to make a solemn affirmation instead of an oath. They have since rendered services to the cause of education, of liberty, and of humanity. They hold the Divinity of Christ, his atonement, and other doctrines generally called evangelical. They give the title of the Word of God to Christ alone, and not to the Scriptures. They hold that every man coming into the world is endued with a measure of light, grace, or good Spirit of Christ. They are opposed to all forms in worship, which divert the attention of the mind from the secret influence of the unction from the Holy One. They believe that the ministry should be unpaid, and decline to pay tithes. They believe the sacraments of baptism and the Lord's Supper to be shadows and unnecessary now that the substance has been attained. They are opposed to taking oaths and war. They disown the heathen names of the days of the week, the observance of times, vain amusements, and compliments. For many years the Friends, both male and female, affected a peculiar style of dress of extreme plainness of shape and colour, but this custom has been gradually discontinued. They have monthly and quarterly meetings, and a yearly one. In 1882 they had in England and Wales 317 places of worship, 254 recorded ministers, and about 400 unrecorded, with about 12,000 church members.

(5) *To be friends with any one:* To be in a relation of friendship with.

(6) *To make friends:* To become reconciled.

* **friĕnd,** * **frend,** *v.t.* [FRIEND, *s.*] To act as a friend towards; to befriend; to favour; to support.

"The people who favoured and *friended* still the name of Constantius."—*P. Holland: Ammianus Marcellinus*, p. 177.

* **friĕnd'-ĕd,** * **frend-ed,** *a.* [Eng. *friend*; *-ed.*]

1. Having friends; befriended, supported.

"O where have I been all this time? how *friended*,
That I should lose myself thus desperately?"
Beaum. & Flet.: Maid's Tragedy, iv.

2. Well disposed; inclined to love or act as a friend.

"Not *friended* by his wish to your high person."
Shakesp.: Henry VIII., i. 2.

***friĕnd'-ĕss, *frend-esse,** *s.* [Eng. *friend; ess.*] A female friend or relation.

"Clepe thou prudence thi *frendesse.*"—*Wycliffe: Proverbs* vii. 4. (*Pursey.*)

***friĕnd'-fŭl, *frend-ful, *frend-fulle, *frende-full,** *a.* [Eng. *friend; ful(l).*] Friendly; kindly disposed; loving.

"Y wolde that God schewe hym silf *frendful* to me bi'signes and werkis, as a spouse to the spousesse."—*Wycliffe: Song of Solomon* i. 1. (Margin.)

***friĕnd'-ĭng,** *s.* [Eng. *friend; -ing.*] The state or quality of being a friend; friendliness, friendship, favour.

"To express his love and *friending* to you."
Shakesp.: Hamlet, i. 5.

friĕnd'-lĕss, *frend-les, *a.* [A.S. *freóndleás;* Dut. *vriendloos;* Ger. *freundlos.*] Destitute of or without friends; forlorn; forsaken.

"*Friendless,* homeless, hopeless, they wandered from city to city." *Longfellow: Evangeline,* ii.

***friendless-man,** *s.*

Old Law: An outlaw.

friĕnd'-lĕss-nĕss, *s.* [Eng. *friendless; -ness.*] The quality or state of being friendless.

***friĕnd'-lĭ-hood, *frende-ly-hede,** *s.* Eng. *friendly; -hood.*] Friendliness; friendship.

"As by way of *frendelyhede.*" *Gower,* ii. 286.

friĕnd'-līke, *a.* [A.S. *friéndlic;* O. Fris. *friondlik;* O. H. Ger. *friuntlih;* M. H. Ger. *vruintlich;* Ger. *freundlich.*] Like a friend; friendly.

"That true faith, wherever it is, worketh and frameth the heart to *friendlike* dispositions unto God, and brings forth *friendlike* carriage in the life towards God."—*Goodwin: Works,* vol. v., pt. ii., p. 48.

friĕnd'-lĭ-lȳ, *adv.* [Eng. *friendly; -ly.*] In a friendly manner; like a friend.

"Tell me if it is not better to be suppressed: freely and *friendlily.*"—*Pope: To Warburton,* Nov. 1742.

friĕnd'-lĭ-nĕss, *s.* [Eng. *friendly; -ness.*]

1. A disposition to friendship; a readiness to act as a friend; good-will, good-nature.

"Why, either, were you ignorant to see't?
Or, seeing it, of such childish *friendliness*
To yield your voices." *Shakesp.: Coriolanus,* ii. 3.

2. An act or exertion of benevolence.

"Let all the intervals be employed in prayers, charity, *friendliness,* and neighbourhood."—*Taylor.*

friĕnd'-lȳ, *a.* & *adv.* [A.S. *freóndlic* (a.), *freóndlice* (adv.).] [FRIENDLIKE.]

A. *As adjective:*

1. Having the qualities, temper, and disposition of a friend; good-natured, kind; willing and ready to act as a friend.

"And they the wiser, *friendlier* few confessed
They deemed him better than his air expressed."
Byron: Lara, i. 7.

2. Characterized by friendliness; kind.

"Warmest and *friendliest* welcome
Gave they, with words of cheer, and she sat and feasted among them."
Longfellow: Evangeline, ii. 4.

3. Amicable; becoming friends: as, To live on *friendly* terms.

4. Not hostile; on good terms; disposed to peace: as, a *friendly* power or state.

5. Favourable, propitious, salutary.

"To life so *friendly,* or so cool to thirst."
Milton: Comus, 678.

6. Favouring, befriending, fortunate.

B. *As adv.:* In the manner of a friend; like friends.

"Let's drink together *friendly.*"
Shakesp.: 2 Henry IV., iv. 2.

¶ (1) *Friendly societies:* Societies formed with the view of assisting any one of their members who may be sick, infirm, or old, or who may have to meet the expense of a funeral in his family; or for providing a certain amount of support for his widow and family on his death. To obtain money for those objects, there is a fixed scale of contributions binding on all the members. Friendly societies existed among the Anglo-Saxons. It is doubtfully stated that one was founded in London in A.D. 1715. An Act for the encouragement of such institutions was passed in A.D. 1793. Many other Acts have since been passed to encourage friendly societies, and protect their members. These were consolidated into one by the Act 18 & 19 Vict. c. 63, passed in 1855, which has itself since been amended four times, —viz., in 1858, 1866, 1875, and 1876. Before any friendly society can be established, the rules must be transmitted to the Registrar of Friendly Societies, and receive his approval.

(2) *Friendly suit:*

Law: A suit instituted between two parties who are not really at variance, to obtain a judicial decision upon a certain point.

***friĕnd'-măn, *frend-man,** *s.* [Eng. *friend,* and *man.*] One who is friendly or well-disposed; a friend.

"The *frendmen* him biwepeth."—*O. Eng. Homilies,* ii. 183.

***friend-rede, *freond-rede,** *s.* [A.S. *freóndræden.*] The state or relation of a friend; friendship.

"Four thousand mark ysende
For to been of his *freondrede.*"
Alisaunder, 1,487.

friĕnd'-shĭp, *frend-schip, *frend-shepe, *frend-shipe, *fren-ship, *freond-scipe, *freond-schipe, *s.* [A.S. *freóndscipe:* cogn. with O. Sax. *friundskepi;* O. Fris. *friondskip, friundschup;* O. H. Ger. *fruintscaf;* M. H. Ger. *vriuntscaft;* Dut. *vriendschap;* Sw. *frändskap;* Dan. *frändscab;* Ger. *freundschaft.*]

1. The condition, disposition, or relation of a friend; an attachment to a person from feelings of esteem, regard, affection, or respect; mutual attachment; friendliness; close intimacy.

"No firmer *friendships* than the fair have shown."
Cowper: The Valediction.

2. Favour; personal kindness; an act or exercise of benevolence; a kind service.

"His *friendships,* still to few confined,
Were always of the middling kind." *Swift.*

3. Kind disposition; good-will.

"You have no cause to hold my *friendship* doubtful."
Shakesp.: Richard III., iv. 4.

* 4. Assistance, help, friendly aid.

"Gracious my lord, hard by here is a hovel.
Some *friendship* will it lend you 'gainst the tempest."
Shakesp.: Lear, iii. 2.

5. Close acquaintance.

"With spiders I had *friendship* made."
Byron: Prisoner of Chillon, xiv.

* 6. Affinity, conformity, aptness to unite or combine.

"We know those colours which have a *friendship* for each other."—*Dryden: Dufresnoy.*

¶ For the difference between *friendship* and *love,* see LOVE.

***friĕnd'-sŏme, *fren-some,** *a.* [Eng. *friend; -some.*] Friendly, kind, gracious.

"*Frendsome* es thi merci."
E. Eng. Psalter, Ps. lxviii. 17.

***friend-stead,** *a.* [Eng. *friend,* and *stead.*] Possessing a friend; befriended.

"I am sure, while Christ lives, I am well enough *friendstead.*"—*Rutherford: Lett.,* pt. i., ep. 144.

frī'-ĕr (1), *s.* [Eng. *fry,* v.; *-er.*] One who or that which fries.

***frī'-ĕr** (2), *s.* [FRIAR.]

Frĭēse, *s.* [Dut. *Friese* = a Frieslander.] The language of Friesland; Frisian.

Frĭēs'-land, *s.* & *a.* [Dut.]

A. *As substantive:*

Geog.: A province in the Netherlands, on the N.E. side of the Zuyder Zee.

B. *As adj.:* Of or belonging to the province described under **A.**

Friesland-oat, *s.*

Hort.: A large variety of the common oat (*Avena sativa*).

frĭēs'-ĭc, frĭēs'-ĭsh, *a.* [FRISIAN.]

frĭēze (1), ***frize** (1), ***freeze,** *s.* [O. Fr. *frize,* a word of doubtful origin.]

Arch.: The central portion of the entablature of a temple or other building, which among the ancients was generally highly enriched by sculpture. The Elgin Marbles which originally ornamented the frieze of the Parthenon at Athens, are among the finest works of sculpture the world has ever produced. (*Milton: P. L.,* i. 716.)

FRIEZE-FRONT OF PARTHENON, ATHENS.

frieze-panel, *s.* One of the upper panels of a six-panel door.

frieze-rail, *s.* The one next to the top rail.

frĭēze (2), ***frize** (2), *s.* & *a.* [Fr. *frise,* prob. from O. Fr. *frise* = Friesland; Dut. *Vries* = a Frieslander; *Vriesland* = Friesland.]

A. *As substantive:*

Fabric: A coarse woollen cloth, having a rough or shaggy nap on one side. It is still extensively manufactured and worn in Ireland, where the word is pronounced *frize.*

"Here Vanity assumes her pert grimace,
And trims her robes of *frieze* with copper lace."
Goldsmith: The Traveller.

B. *As adj.:* Made of the material described in A.

"Woven after the manner of deep, *frieze* ruffes."—*P. Holland: Plinie,* bk. viii., ch. xlviii.

***frĭēzed,** *a.* [Eng. *friez(e)* (1); *-ed.*] Made rough or shaggy like the nap of frieze.

"Our mantles, *friezed* deep both within and without."—*P. Holland: Plinie,* bk. viii., ch. xlviii.

frĭē'ze-līke, *a.* [Eng. *frieze* (1); *-like.*] Resembling a frieze.

"I have seen the figure of Thalia, the comick muse, sometimes with an entire headpiece and a little *frieze-like* tower."—*Addison: On Italy; Rome.*

***frĭēz'-ĕr,** *s.* [Eng. *friez(e)* (2); *-er.*] One who or that which friezes.

frĭēz'-ĭng, *a.* [Eng. *friez(e)* (2); *-ing.*] Adapted, intended, or employed for making frieze: as, a *frieze* machine.

Frĭg'-ą, Frĭg'-gą, Frey-a, *Frie, *s.* [O. Icel. *Frigg;* in A.S. *Frig;* cogn. with *frig, free* & *frige* = wooing, courtship.] [FREE, FRIEND.]

1. *Myth.:* The old Scandinavian goddess of love, corresponding to the Roman Venus, and the Greek Aphroditê. She was the wife of Odin. [FRIDAY.]

2. *Astron.* (*Of the form* Frigga): An asteroid, the 77th found. It was discovered by Peters on Nov. 12, 1862.

frĭg'-ąte, *frĭg'-ąt, *frig-ot, *s.* [Fr. *frégate,* from Ital. *fregata* = a frigate; Sp. *fragata;* prob. for **fargata,* a contracted form of Lat. *fabricata,* fem. sing. pa. par. of *fabrico* = to build.]

I. *Ordinary Language:*

1. In the same sense as II.

*2. Any small vessel on the water.

"Behold the water work and play
About her little *frigat,* therein making way."
Spenser: F. Q., II. vi. 7.

II. *Naut.:* Originally a Mediterranean vessel propelled by sails and oars; afterwards a ship of war, between a sloop or brig and a ship of the line. Such vessels generally carried from thirty to fifty guns on the main deck and on a raised quarter-deck and forecastle. They were usually employed as cruisers or scouts.

FRIGATE.

The name is now given to a vessel of war having an upper flush deck, and one covered gun-deck. The armament is from twenty-eight to forty-four guns. The grade is below a ship of the line and above a corvette. The rating of iron-clads is different, the guns being larger and fewer in number.

"The plan of the allies was that seventy ships of the line and about thirty *frigates* and brigantines should assemble."—*Macaulay: Hist. Eng.,* ch. xx.

¶ *Double-banked frigate:*

Naut.: A frigate carrying guns on two decks and having a flush upper-deck.

frigate-bird, *s.*

Ornith.: Tachypetes, a genus of natatorial birds, family Pelecanidæ, and specially *Tachypetes Aquilus.* They have a long and forked tail, and an expansion of wings sometimes reaching ten or twelve feet. They abound on both the Atlantic and Pacific coasts of tropical America, building their nests in trees, and laying one or two eggs. They are called also Man-of-War birds. Both names are derived from their swiftness and raptorial habits.

frigate-built, *a.*

Naut.: Having a quarter-deck and forecastle raised above the main-deck.

frĭg-a-toôn′, *s.* [Ital. *fregatone.*]

Naut.: A Venetian vessel with a square stern, no foremast, but only a mainmast and mizenmast.

* **frĭg-ĕ-făc′-tion,** *s.* [Lat. *frigefacio* = to make cold; *frigus* = cold, and *facio* = to make.] The act or process of making cold.

* **frĭg-ĕ-făc′-tĭve,** * **frig-i-fac-tive,** *a.* [Frigefaction.] Tending to make cold; cooling.

"Towards what part the *frigefactive* virtue of cold bodies does operate the furthest and most strongly."—*Boyle: Works*, vol. ii., p. 524.

* **frĭg′-ĕr-āte,** *v.t.* [Lat. *frigeratus*, pa. par. of *frigero* = to make cold; *frigus* (genit. *frigoris*) = cold.] To cool.

* **frĭg′-ĕr-a-tŏr-ȳ,** *s.* [Lat. *frigeratory*, pa. par. of *frigero* = to make cool or cold; *frigus* = cold.] A cooling-chamber; a chamber maintained at a low temperature for the preservation of meat or vegetables.

Frĭg′-ga, *s.* [Friga.]

* **frĭg′-gle,** *v.i.* [A variant of wriggle (q.v.).] To wriggle.

"To cut off the *friggling* tail of that hydra."—*Ward: Sermons*, p. 173.

frīght (*gh* silent), * **freyhte,** * **fryght,** *s.* [Prop. *fyrght*, from A.S. *fyrhto, fyrhtu* = fright; *fyrht* = timid; *áfyrhtan* = to affright; O. Sax. *foroht, foraht, forht* = fright; Dan. *frygt* = fright; *frygte* = to fear; Sw. *fruktan* = fright; *frukta* = to fear; Goth. *faurhtei* = fright; *faurhtjan* = to fear; Ger. *furcht* = fright; *fürchten* = to fear; O. H. Ger. *forhta, forohta, forahta* = fright; Dut. *vrucht* = fright. For the shifting of the *r*, cf. *bird* for *brid, brimstone* for *burnstone*, &c.]

1. A sudden and violent fear or alarm; a state of terror caused by a sudden appearance of danger.

"They start, they tremble in a deadly *fright*,
And round the room precipitate their flight."
Fawkes: Horace, sat. ii., 6.

2. Anything which causes or is calculated to cause alarm or fright; colloquially applied to a person who presents a ridiculous or shocking appearance in person or dress.

"Wilson was thinking, 'I never saw such a mortal *fright* as the new governess.'"—*Mrs. H. Wood: East Lynne*, pt. iii., ch. ii.

* **frīght** (*gh* silent), *v.t.* [A.S. *fyrhtan.*] [Frighten.] To frighten, to alarm, to affright, to scare.

"Tarquinius thinking it good to take the time, and follow hard upon them whiles they were *frighted*, marched on still forward."—*P. Holland: Livius*, p. 27.

frīght′-en (*gh* silent), *v.t.* [A.S. *fyrhtan, afyrhtan* = to affright; O. S. *forhtian*; O. H. Ger. *forahtan, forhtan*; Goth. *faurhtjan*; O. Fris. *fruchta*; Low Ger. *fruchten*; Ger. *fürchten*; Sw. *frukta*; Dan. *frygte* = to fear.] To throw into a state of fright; to alarm, to scare, to terrify, to dismay.

"The lightning flies, the thunder roars,
And big waves lash the *frightened* shores."
Prior: The Lady's Looking-glass.

¶ Crabb thus discriminates between to *frighten* and to *intimidate*: "Between *frighten* and *intimidate* there is the same difference as between *fright* and *fear*; the danger that is near or before the eyes *frightens*; that which is seen at a distance *intimidates*: hence, women are oftener *frightened*, and men are oftener *intimidated*: noises will *frighten*; threats may *intimidate*: we may run away when we are *frightened*; we waver in our resolution when we are *intimidated*: we fear immediate bodily harm when we are *frightened*; we fear harm to our property as well as our persons when we are *intimidated*: *frighten*, therefore, is always applied to animals, but *intimidate* never." (*Crabb: Eng. Synon.*)

* **frīght′-en-a-ble** (*gh* silent), *a.* [Eng. *frighten*; *-able.*] That may or can be easily frightened.

frīght′-fụ̂l (*gh* silent), *a.* [Eng. *fright*; *-ful(l).*]

* 1. Full of or feeling fear; afraid, timid, scared.

"See how the *frightful* herds run from the wood."
Browne: Britannia's Pastorals, bk. ii., s. 3.

2. Causing or inspiring fright or alarm; terrible, dreadful, fearful.

"Death was denounced; that *frightful* sound,
Which even the best can hardly bear."
Dryden: Threnodia Augustalis, 196, 197.

¶ A limitation in intensity like that which has taken place in the meaning of the adj. *frightful* has also arisen in the words *dreadful* and *fearful*.

¶ For the difference between *frightful* and *fearful*, see Fearful.

frīght′-fụ̂l-lȳ (*gh* silent), *adv.* [Eng. *frightful*; *-ly.*]

1. In a manner to cause fright or alarm; dreadfully, terribly, fearfully.

"This will make a prodigious mass of water, and looks *frightfully* to the imagination; 'tis huge and great."—*Burnet: Theory of the Earth.*

2. In an extremely shocking or disagreeable degree or manner; shockingly.

"His features were *frightfully* harsh."—*Macaulay: Hist. Eng.*, ch. xix.

frīght′-fụ̂l-nĕss, **fright-ful-nesse** (*gh* silent), *s.* [Eng. *frightful*; *-ness.*]

*1. The state of feeling fright or fear; terror, alarm.

"Those few horses that remaine are sent forth for discovery, they find nothing but monuments of *frightfulnesse*, pledges of security."—*Bp. Hall: Contempl.; Samarians Famine Relieved.*

2. The quality or state of being frightful; the power or quality of impressing terror.

"All this serveth chiefly to cover the *frightfulness* of mortality."—*Nelson: Life of Dr. Bull.*

* **frīght′-lĕss** (*gh* silent), *a.* [Eng. *fright*; *-less.*] Free from fright; fearless.

* **frīght-ĭ-hoọd** (*gh* silent), * **fright-i-hed,** *s.* [Eng. *frighty*; *-hood.*] Fright, terror, alarm.

"Al he it listnede in *frigtihed*."
Genesis & Exodus, 2,222.

* **frīght′-ĭ-lȳ** (*gh* silent), * **frigt-i-like,** *adv.* [Eng. *frighty*; *-ly.*] In fear, in terror.

"Jacob abraid and seide *frigtilike*."
Genesis & Exodus, 1,617.

* **frīght′-ȳ** (*gh* silent), * **frigti,** *a.* [Eng. *fright*; *-y.*]

1. Afraid, fearful.

"Tho wurthen he *frigti*."
Genesis & Exodus, 667.

2. Frightful, terrible.

"Of him kumen folc *frigti*."
Genesis & Exodus, 983.

* **frīght′-mĕnt** (*gh* silent), *s.* [Eng. *fright*; *-ment.*] The state of being frightened or alarmed; fright, terror, alarm.

"All their *frightments* are but idle dreams."
J. Webster. (*Webster.*)

frĭg′-ĭd, *a.* [Lat. *frigidus* = cold, from *frigeo* = to be cold; *frigus* = cold; cogn. with Gr. ῥῖγος (*rhigos*) = cold; Ital. & Sp. *frigido.*]

I. *Lit.:* Cold, cool; wanting heat or warmth.

"There is also a great difference betwixt the degrees in coldness in the air of *frigid* regions and of England."—*Boyle: Works*, ii. 509.

II. *Figuratively:*

1. Cold; wanting in warmth of feeling or zeal; stiff, cool, forbidding; as, a *frigid* manner.

2. Dull, lifeless; without animation or spirit.

"Bleak level realm, where *frigid* styles abound."
Parnell: To Lord Viscount Bolingbroke.

* 3. Without natural heat or vigour; impotent.

¶ For the difference between *frigid* and *cool*, see Cool.

frigid zones, *s. pl.*

Math. & Geog.: The two cold zones or imaginary belts encircling the world. The former contains what mathematicians would call the small circle of the earthly sphere, having the North Pole for its centre and the Arctic circle (23° 28′ distant) for its circumference. Similarly the latter has the South Pole for its centre, and the Antarctic circle (23° 28′) for its circumference. Within these limits there is but one day and one night in the year, each nominally six months in duration, but the day is really considerably longer than the normal amount owing to the influence of refraction in keeping the sun above the horizon. The intense cold of winter covers every land within the limits with glaciers and congeals immense expanses of every sea. The heat of summer, on the contrary, is much above what might be expected, for, though the solar beams are very oblique, yet, continuing for half a year without intervals of night, they produce great effects. It is a geological problem how plants, now found fossil in the polar latitudes, managed to pass undestroyed through the long winter. The Frigid is called also the Frozen Zone.

* **frĭg-ĭ-där′-ĭ-ŭm,** *s.* [Lat.]

Anc. Arch.: An apartment not warmed artificially, in which the cold bath was placed. The term is now applied to the cooling room in a Turkish-bath.

frĭ-gĭd′-ĭ-tȳ, *s.* [Lat. *frigiditas*, from *frigidus* = cold; Fr. *frigidité*; Ital. *frigidità.*]

I. *Lit.:* Coldness; absence or want of heat or warmth.

"Ice is water congealed by the *frigidity* of the air."—*Brown: Vulgar Errours*, bk. ii., ch. i.

II. *Figuratively:*

1. Coldness, coolness; a want or absence of warmth of feeling or zeal.

2. Dullness; want or absence of animation, life, or spirit.

"He [Bishop Hall] falls down to that wretched poorness and *frigidity*, as to talk of Bridge street in heaven, and the hostler of heaven."—*Milton: Apology for Smectymnuus.*

*3 Want of natural heat or vigour; impotence.

"The *frigidity* of decrepit age is as much its enemy, by reason of its dulling moisture."—*Glanvill: Scepsis Scientifica.*

frĭg′-ĭd-lȳ, *adv.* [Eng. *frigid*; *-ly.*] In a frigid, cold, dull or lifeless manner; without warmth, animation, or life.

"If in the Platonical philosophy there are some things directing to it [*sc.* a communion with God,] yet they are but *frigidly* expressed."—*Bates: Harmony of the Divine Attributes*, ch. xvii.

* **frĭg-ĭd′-nĕss,** *s.* [Eng. *frigid*; *-ness.*] Coldness, coolness, dullness, frigidity.

* **frĭg′-ŏr-ĭf′-ĭc,** * **frig-ŏr-ĭf′-ĭck,** *a.* [Lat. *frigorificus*; from *frigus* (genit. *frigoris*) = cold, and *facio* = to make; Fr. *frigorifique.*] Causing or generating cold.

"And when the *frigorifick* power was arrived at the height, I several times found that water thinly placed on the outside, whilst the mixture within was nimbly stirred up and down, would freeze in a quarter of a minute by a minute watch."—*Boyle: Works*, vol. iii., p. 147.

* **frĭg-ŏr-ĭf′-ĭc-al,** *a.* [Eng. *frigorific*; *-al.*] The same as Frigorific (q.v.).

frĭll, *s.* [Frill, *v.*]

1. The ruffling of a hawk's feathers when frilling with cold.

2. A pleated or fluted edging; as of linen on the bosom of a shirt, &c., or of paper for table decoration.

"Though the ruffle had vanished,
A *frill* like a fan had by no means been banished."
Barham: Ingoldsby Legends; Aunt Fanny.

frill-lizard, *s.*

Zool.: The Australian reptile, genus Chlamydosaurus. It has an erectile membranous plaited frill on its neck.

frĭll, *v.i. & t.* [Fr. *friller* = to shiver with cold; from *frilleux* = cold; from Lat. * *frigidulosus*, from *frigidulus*, a dimin. from *frigidus* = cold.]

* **A.** *Intrans.:* To shake, to shiver with cold. (Said of hawks.)

B. *Trans.:* To furnish or decorate with a frill.

frĭlled, *a.* [Eng. *frill*; *-ed.*] Furnished or decorated with a frill or frills.

frĭll′-ĭng, *s.* [Eng. *frill*; *-ing.*] A species of plaited or fluted edging or trimming of fine linen. The gathered or plaited edge is sewn to a band, and the crimped or ruffled edge forms a collar, a cuff, or an ornament to a shirt-front.

Frî-mäire′, *s.* [Fr.]

Calendar & Hist.: A term meaning frosty or sleety, but freely translated by an English wit freezy. Adopted, in October, 1793, by the French Convention, for the third month of the republican year. It commenced on Nov. 21, and ended on Dec. 20.

frĭt-ĭl-lā'-rĭ-ạ, *s.* [From Lat. *fritillus* = a dice-box, which the chequered petals resemble.]

Bot.: A genus of Liliaceæ, tribe Tulipeæ. The bulbs are often clustered, the leaves sessile, not sheathing, the flowers drooping, the perianth campanulate, anthers attached to the filament above the base in front, the style three-cleft at the apex, the capsule three-celled, three-valved oblong, seeds many, flat. About thirty species are known. One is *Fritillaria Meleagris*, the Common Fritillary or Snake's-head, found, though rarely, in England in moist meadows; the flowers are tesselated with dull purple, occasionally almost colourless.

frĭt'-ĭl-lạr-ȳ, *s.* [FRITILLARIA.]

1. *Bot.:* The English name of the genus Fritillaria (q.v.).

2. *Entomology:*

(1) Various butterflies divided by Stainton into Large and Small Fritillaries. The genus Argynnis, or the sub-family Argynnidi, ranked under the family Nymphalidæ. *Argynnis Paphia* is the Silver-washed Fritillary, *A. Aglaia* the Dark-green Fritillary, *A. Leathonia*, the Queen of Spain Fritillary, *A. Selene* the Small Pearl-bordered Fritillary. All these species are British.

"The white admirals and silver-washed *fritillaries* flit around every bramble-bed." — *C. Kingsley: Two Years Ago,* ch. xxiii.

(2) The genus Nemeobius, one of the Erycinidæ. *Nemeobius Lucina* is the Burgundy Fritillary; this also is British. (*Stainton.*)

* **frĭt'-ĭ-năn-çȳ,** *s.* [Lat. *fritinnio* = to twitter.] A chirping or twittering as of an insect.

"The note or *fritinancy* thereof is far more shrill than the locust, and its life short."—*Browne: Vulgar Errours,* bk. v., ch. iii.

1. A small piece of meat, apples, &c., fried in batter.

"Keep it from pasty baked or flying,
From broiling steak, or *fritters* frying."
Swift: To Dr. Sheridan; On his Art of Punning.

2. A small piece; a fragment; a bit.

"If you strike a solid body that is brittle, as glass or sugar, it breaketh not only where the immediate force is, but breaketh all about into shivers and *fritters*."—*Bacon: Natural History.*

3. A cheesecake. (*Ainsworth.*)

frĭt'-tẽr, *v.t.* [FRITTER, *s.*]

1. *Lit.:* To cut meat, &c., into small pieces to be fried.

2. *Fig.:* To break up into small particles, pieces, or fragments.

¶ *To fritter away:* To waste away by little and little, frivolously, or in trifles.

"How prologues into prefaces decay,
And these to notes are *frittered* quite *away*."
Pope: Dunciad, i. 277, 278.

frĭtt'-ĭng, *pr. par.* or *a.* [FRIT, *v.*]

fritting-furnace, *s.*

Glass-mak.: A reverberatory furnace in which the materials for making glass are calcined (fritted) as a process preliminary to melting. The object is to effect a partial union of the silicic acid and alkali, to avoid volatilization of the latter in the subsequent vitrification. The materials (sand, chalk, soda-ash, and cullet) being introduced into the furnace, the temperature is gradually raised for three hours. The pasty mixture is stirred, and the temperature increased to incipient fusion. The stuff is then raked out and transferred to the melting-pot, or is placed in cast-iron trays, cut into blocks with a spade, and stored away as frit-bricks.

frĭtzsche'-ite, *s.* [Named after Fritzche who analyzed it.]

Min.: A vitreous or pearly reddish-brown or hyacinth mineral, its hardness 2 to 2·5, its sp. gr. 3·50. It has in its composition oxide of uranium, protoxide of manganese, vanadic acid, phosphoric acid and water. Found in Bohemia and Saxony. (*Dana.*) The *Brit. Mus. Cat.* makes it a variety of Calcouranite.

* **frĭv'-ạll,** *a.* [FRIVOLOUS.]

* **frĭv'-ōle,** *v.t.* [Fr. *frivole* = frivolous.] To annul, to set aside; to declare frivolous.

"Gif thir jugis *frivole* his appellacioun, and convict him, than sall his hede be coverit, his body skurgit, and eftir all hingit on ane unhappy tre."—*Bellenden: Livius,* p. 45.

* **frĭv'-ō-lĭsm,** *s.* [Fr. *frivol(e)* = frivolous; Eng. suff. *-ism.*] Frivolity, frivolousness.

frĭ-vŏl'-ĭ-tȳ, *s.* [Fr. *frivolité*, from *frivole* = frivolous (q.v.). The French word *frivolité* does not appear in either editions of the *Dictionary of the Academy*, as if it had not rooted itself in the language till after their publication. (*Trench: English Past & Present,* pp. 38, 39.) The seventh edition (1878), in which it finds a place, had not been published when Trench wrote.] The quality or state of being frivolous, insignificant or trifling; frivolous or trifling behaviour; unbecoming levity of manner or disposition.

"Upon his eye sate something of reproof,
That kept at least *frivolity* aloof."
Byron: Lara, i. 7.

frĭv'-ō-loŭs, * **frĭv'-ĭ-loŭs,** *a.* [Lat. *frivolus* = silly, trifling; properly, rubbed away, broken as sherds, from *frio* = to rub; Fr. *frivole*; Ital. & Sp. *frivolo.*]

frŏg (1), * **frogge,** * **frugge,** * **froge,** *s.* [A.S. *froga;* Dan. & Sw. *frø;* Ger. *frosch.*]

Zoology:

1. *Sing.:* The English name of the amphibious genus Rana, and particularly of the species *Rana temporaria*, or Common Frog. The genus Rana is distinguished from its congeners by having the tongue and tympanum distinct, the skin smooth, and the toes without claws; they are, however, pointed, and the hinder feet are united almost to the tips by a membrane. The species are numerous; they are widely distributed over the globe, many inhabiting tropical regions. The common frog is too well known to require description. It is found at the genial period of the year, burying itself at the approach of winter, in the mud at the bottom of ponds, and reappearing early in spring. In the month of March it lays its eggs, which are enveloped in a gelatinous material, in water, where they float. Each female deposits from six to twelve hundred eggs a year. By April they have greatly increased in size and are becoming hatched. The immature frogs which come forth are called tadpoles. They have tails, no legs, breathe by gills, and are aquatic. Six or eight weeks later the legs are fully developed, the tail is absorbed, and they quit the water, remaining, however, in its vicinity to the last. The common frog is found in most parts of Europe, in the northern parts of Asia, in the North of Africa, and in North America. *Rana esculenta* is the Eatable frog, rare in England, but common on the European continent. *R. pipiens* is the Bull-frog of North America, and *R. clamitans* the Grunting or Argus Frog.

2. *Pl.* Frogs: The family Ranidæ, of which Rana is the type. They have a thick body, destitute of a tail; feet four, long, muscular, and adapted for leaping; the larva elongate, fish-like, tailed, and without legs; the gills four on each side. The family does not include the Tree Frogs, which are ranked as Hylidæ (q.v.).

"Yield me an hostry mongst the croking *frogs.*"
Spenser: F. Q., V. x. 23.

2. *Farr.:* A kind of tender horny substance growing in the middle of a horse's foot, dividing into two branches, which run like a fork towards the heel.

"The heel broad, the *frog* thin and small."—*Southey: The Doctor*, ch. cxliii.

¶ According to Prof. Skeat, the word in sense 2 is a corruption of *fork;* if so, that sense should be referred to FROG (3) (q.v.).

frog-cheese, *s.*

Bot.: One of the larger puff-balls when young. (*Berkeley.*)

frog-crab, *s.*

Zool.: The crustaceous genus Ranina, one species of which can climb trees.

frog-current, *s.*

Elect.: The name given by Matteuci to animal electricity.

frog-eater, *s.* A term of contempt for a Frenchman.

frog-fly, *s.* The same as FROGHOPPER (q.v.).

frog-orchis, *s.*

Bot.: Habenaria or *Gymnadenia viridis.* It has several leaves, and green flowers with a short spur. It is found in hilly meadows in the northern parts of Britain, also in Northern Europe and Asia, and in North America.

frog-plate, *s.*

1. An accessory to the compound microscope in which the web of a frog's foot is exposed on the stage, to exemplify the circulation of the blood.

2. The same as FROG (3) (q.v.).

frog-shell, *s.*

Zool.: The molluscous genus Ranella (q.v.). It belongs to the family Muricidæ.

frog-spit, frog-spittle, *s.*

Zool.: The spittle-like substance seen enveloping the larva of the Cuckoospit froghopper (*Aphrophora spumaria*).

frog's-foot, *s.*

Bot.: The genus Lemna.

frog's-march, *s.*

1. A crawling on hands and knees.

"He had had a *frog's-march*—that is to say, on hands, belly, and knees."—*Sir S. Lakeman: What I saw in Kaffir-Land*, p. 20.

2. The being carried by two or four men face downwards, a method often employed by policemen with violent drunken men. (*Slang.*)

"Treating a refractory tojer to the *frog's-march*, by carrying him, face downwards, to the station."—*Daily Telegraph*, Nov. 29, 1882.

frŏg (2), *s.* [Port. *froco* = a flock of wool or of silk; Lat. *flocous.*]

1. *Ord. Lang.:* Lace wrought round a button-hole.

"With tabby lined, and *frogs* complete."
Anstey: Pleaders' Guide, lect. vii.

2. *Military:*

(1) A button or toggle of spindle-shape, and covered with silk or other material, which is passed through a loop on the opposite side of the breast of a military cloak or overcoat, serving to fasten the two breasts together.

(2) The loop of a bayonet or sword scabbard.

"In a kind of *frog* on either side of this [belt] hung a little saw and hatchet."—*Defoe: Robinson Crusoe*, p. 158 (ed. 1858).

frŏg (3), *s.* [A corrupt. of *fork*, from the shape.]

Rail. Engin.: A section of rail at a point where rails diverge, or one track leads to two branches. A cross-frog is one placed at a rectangular intersection of railroad tracks.

frŏg (4), *s.* [Etym. doubtful.] A young horse, more than one, but less than two years old.

frŏg (5), *s.* [Etym. doubtful.] A flying shower of sleet or snow. (*Scotch.*)

frŏg (1), *v.t.* [FROG (2), *s.*] To fasten or ornament with a frog.

"City clerks in *frogged* coats." *Lytton.*

frŏg (2), *v.i.* [FROG (5), *s.*] To snow or sleet at intervals. (*Scotch.*)

frŏg′-bĭt, *s.* [A translation of Lat. *Morsus ranæ* as the name of the best-known species (see def.). Why so called is uncertain.]

Bot.: The genus Hydrocharis (q.v.), and specially *H. morsus ranæ*, which is found in ponds and ditches in Britain. It has orbicular, reniform leaves, and flowers in July and August.

¶ *American frog bit:*

Bot.: The genus Linnobium.

* **frŏg′-ēr-ĭ,** *s.* [Eng. *frog; -ery.*] A place where frogs abound.

frŏg′-fĭsh, *s.* [Eng. *frog*, and *fish.*]

Ichthyology:

1. The genus Batrachus, which belongs to the family Lophiidæ. They have a horizontally-flattened head, broader than the body, a deeply-cleft mouth, which is often furnished with filaments, the operculum and suboperculum spinous, the anterior dorsal fin short, and supported by three spinous rays. They keep themselves hidden in the sand, like the fishing frog, *Lophius piscatorius*, and surprising their prey, inflict dangerous wounds with their spinous rays. *Batrachus grunniens* (the *Cottus grunniens* of Linnæus), so called from grunting when it is caught, is found in America.

2. The genus Chironectes (q.v.), also belonging to the Lophiidæ.

3. A name for the Fishing Frog (q.v.).

frŏgged, *pa. par.* or *a.* [FROG, *v.*]

frŏgg′-ĭng, *s.* [FROG, *v.*] A kind of braid on a coat.

frŏg′-grass, *s.* [Eng. *frog*, and *grass.*]

Bot.: (1) *Salicornia herbacea;* (2) *Juncus bufonius.*

* **frŏg′-gĭ,** *a.* [Eng. *frog; -y.*] Abounding in frogs.

* **frŏg′-hood,** *s.* [Eng. *frog; -hood.*] The state or condition of a frog.

"To have his *froghood* called in question."
Smart: The Duellist.

frŏg′-hŏp-pērs, *s. pl.* [Eng. *frog*, and *hopper.*]

Entom.: The sub-section Cicadellina, or the family Cercopidæ, ranked under the Homopterous sub-order of Insects. The name froghopper refers partly to the form of their body, partly to their leaping powers, which are great; this power arises from the length of their hind legs. The Common Froghopper is *Aphrophora spumaria;* another species often met with in gardens is *A. bifasciata.* The larva of these insects, which resembles that of the parent in most respects except in the want of wings, envelops itself in a froth resembling human spittle. All must have often observed this on plants.

frŏg′-lĕt-tŭçe, frog's lettuce, *s.* [Eng. *frog*, and *lettuce.*]

Bot.: Potamogeton densus.

* **frŏg′-lĭng,** *s.* [Eng. *frog;* dim. suff. *-ling.*] A little frog.

"The wormlings of the earth, nor the *froglings* of the water."—*Jarvis: Don Quixote*, pt. i., bk. iii., ch. iv.

frŏg'-wŏrt, *s.* [Eng. *frog*, and *wort*.]

Botany:

1. A name sometimes given to the genus Ranunculus (q.v.). (*Paxton.*)

2. Several species of Orchis, specially *O. mascula* and *O. Morio.* (*Holdich; Britten & Holland.*)

*** frŏlṣe, * froyse,** *s.* [FRAISE.]

frŏl'-ĭc, * frŏl'-ĭck, * frol-icke, *a.* & *s.* [Dut. *vrolijk;* Ger. *fröhlich*, from *froh* = joyous, glad; O. Sax. *fráh;* O. H. Ger. *fro;* O. Fris. *fro.*]

*** A.** *As adjective:*

1. Gay, merry, frisky, frolicsome, full of pranks or mirth; dancing about.

"The gambols of each *frolic* child." *Scott: Marmion*, i. (Introd.)

2. Accompanied with merriment.

"Belshazzar was gulping down his *frolick* cups and taking his fill of earthly pleasures."—*Bp. Beveridge*, vol. ii., ser. 137.

B. *As substantive:*

1. A wild prank; a merry, frolicsome flight.

"Make 'em an appointment 'twixt jest and earnest; 'twill look like a *frolick*."—*Vanbrugh: Provoked Wife*, iii.

2. A scene of gaiety or mirth; a merry-making.

* 3. A plaything.

"With such fruit as a *frolick* in her hand."—*Fuller: Pisgah Sight*, IV. vii. 40.

¶ Crabb thus discriminates between *frolic*, *gambol*, and *prank*: "The *frolic* is a merry, joyous entertainment; the *gambol* is a dancing, light entertainment; the *prank* is a freakish, wild entertainment. Laughing, singing, noise, and feasting, constitute the *frolic* of the careless mind; it belongs to a company: conceit, levity, and trick, in movement, gesture, and contrivance, constitute the *gambol;* it belongs to the individual; adventure, eccentricity, and humour, constitute the *prank;* it belongs to one or many. One has a *frolic;* one plays a *gambol*, or a *prank*. *Frolic* is the diversion of human beings only; *gambol* and *prank* are likewise applicable to the brutes: a kitten plays its *gambols;* a horse, a monkey, and a squirrel, will play its *pranks*." (*Crabb: Eng. Synon.*)

frolic-gambol, *s.* A frolic, a gambol, a frisk.

"Even bearded knights, in arms grown old,
Share in his *frolic-gambols* bore."

1. Carved work resembling fruit; a fruit-piece.

2. A confection of fruit.

frû-tĕs'-çence, *s.* [Eng. *frutescen(t); -ce.*]

Bot.: Shrubbiness; the state of existing as a shrub.

frû-tĕs'-çent, *a.* [Abbreviated from Lat. *fruticescens* = becoming bushy, pr. par. of *fruticesco.*]

Bot.: Shrubby, as distinguished from herbaceous and arboreal.

"By this means a *frutescent* character may be given to the smallest herbs, as is done with the tree mignonette."—*Lindley: Horticulture.*

frutescent celandine, *s.*

Bot.: *Bocconia frutescens.*

***frût'-ĭc-al, *frût'-ĭc-all,** *a.* [Lat. *frutex* (genit. *fruticis*); Eng. adj. suff. *-al.*] Of the nature of a shrub; shrubby.

frût'-ĭc-ant, *a.* [Lat. *fruticans* (genit. *fruticantis*), pr. par. of *fruticor* = to become bushy; *frutex* = a bush.] Full of shoots.

"These we shall divide into the greater and more cedunous, *fruticant*, and shrubby."—*Evelyn: Sylva* (Introd. § 2.)

frût'-ĭ-çĭst, *s.* [Lat. *frutex*, genit. *fruticis* = fruit; suff. *-ist.*]

Bot.: One who is in favour of classifying plants according to their fruit; a fruitist.

"On this question the botanical world was divided into factions of Corollists and *Fruticists*."—*Earle: Eng. Plant Names*, p. xxxvii.

***frût'-ĭ-coŭs, frût'-ĭ-cōse,** *a.* [Lat. *fruticosus*, from *frutex* (genit. *fruticis*) = a shrub.] Of or pertaining to shrubs; of the nature of a shrub; shrubby.

fruticose lichens, *s. pl.*

Bot.: Lichens having the thallus more or less arborescent in form.

frû-tĭc'-u-lōse, *a.* [Mod. Lat. *fruticulosus*, from Lat. *fruticulus* = a small shrub, dimin. of *frutex* = a shrub.]

Bot.: Of or belonging to a small shrub.

frȳ, *fri-en, *frye, *freye, *v.t. & i.* [Fr. *frire*; Prov. *frigir, frire*, from Lat. *frigo* = to roast; cogn. with Port. *frigir*; Sp. *freir* = to roast, fry; Gr. φρύγω (*phrugō*) = to parch; Skt. *bhrajj* = to boil, fry.]

A. To dress food by heating or roasting in a pan over a fire; to cook in a frying-pan.

"Take brede and *frye* hit in grece thou schalle."
Liber Cure Cocorum, p. 28.

B. *Intransitive:*

I. *Literally:*

1. To be dressed in a pan over a fire; to be cooked in a frying-pan.

2. To be roasted in any way.

"Thenne to *frye* in oure owne gres."
Richard Cœur de Lion, 4,407.

3. To understand or to be expert in the cooking of food by frying.

*4. To suffer the action of heat.

***II.** *Figuratively:*

1. To melt with heat.

"Spices and gums about them melting *fry*,
And phœnix-like, in that rich nest they die."
Waller: Of a War with Spain, 83.

2. To be agitated, to boil, to foam.

"Ye might have seen the frothy billows *fry*."
Spenser: F. Q., II. xii. 45.

3. To ferment, as in the stomach.

"To keep the oil from *frying* in the stomach, drink mild beer after it."—*Bacon: Natural History.*

4. To suffer torment, to burn.

"My blandishments were fewel to that fire
Wherein he *fry'd*."
Drayton: Legend of Pierce Gaveston.

5. To ferment in the mind.

"What kindling motions in their breasts do *fry*?"
Fairfax.

frȳ (1), *s.* [Fry, *v.*]

1. *Lit.:* That which is fried; a dish prepared for table by frying.

"This came from
The Indies, and eats five crowns a day in *fry*,
Ox-livers, and browne paste."
Mayne: City Match, iii. 1.

*2. *Fig.:* A state of mental ferment or agitation.

frȳ (2), ***fri, *frie, *frye,** *s.* [Icel. *frœ, frjó* = spawn, fry; Dan. & Sw. *frö*; Goth. *fraiw* = seed; Fr. *frai* = spawn, fry; O. Fr. *fray, fraye*.]

*1. Seed, offspring.

"To the and to thi *fry*
My blessyng graunt I."
Towneley Mysteries, p. 24.

2. A swarm or crowd, particularly of small young fishes.

"Forthwith the sounds and seas, each creek and bay,
With *fry* innumerable swarm."
Milton: P. L., vii. 400.

3. A swarm or crowd of young people; young people, in contempt.

"Out of the *fry* of these rakehell horseboys, growing up in knavery and villainy, are their kern continually supplied and maintained."—*Spenser: View of the State of Ireland.*

"A heape of hurtes, a *frie* of foul decaies."
Mirrour for Magistrates, p. 56.

5. The young of the salmon at a certain stage of development.

frȳ (3), *s.* [Etym. doubtful.] A kind of sieve.

"He dresseth the dust from malt by running it through a fan or *fry*."—*Mortimer: Husbandry.*

frȳ'-ing, *pr. par., a., & s.* [Fry, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* The act of cooking in a frying-pan; the state of being fried.

frȳ'-ing-păn, *s.* [Eng. *frying*, and *pan*.] A pan, with a long handle, in which food is fried.

¶ *Out of the frying-pan into the fire:* From one evil into another still greater.

"Some, though they shun the *fryingpan*,
Do leap into the fire."
Bunyan: Pilgrim's Progress, pt. ii.

fû', *a.* [Full.]

***fū'-age (age** as **ĭg),** *s.* [Fumage.]

fū'-ar, *s.* [Feuar.]

***fŭb, *fŭbs,** *s.* [Etym. doubtful. Perhaps connected with *fob* (q.v.).] A fat, chubby child.

"That same foule deformed *fubs*."
Rub and a Great Cast (1614), Ep. 44.

***fŭb,** *v.t.* [Fob, *v.*] To delude, to cheat; to put off with false excuses.

"I have borne, and borne, and borne, and have been *fubbed* off and *fubbed* off from this day to that day."—*Shakesp.: 2 Henry IV.*, ii. 1.

***fŭb'-bĕr-ȳ,** *s.* [Eng. *fub*, v.; *-ery*.] Cheating, swindling, deception.

"O no; but dream the most fantastical,
O heaven! O *fubbery, fubbery*."
Marston: Malcontent, i. 3.

fŭb'-bȳ, *a.* [Eng. *fub*, s.; *-y*.] Fat, plump, chubby.

"Say, for instance, of the boys of Fiammengo that they are *fubby*."—*Nicholls: Literary Anecdotes*, ix. 339.

fŭb'-sȳ, *a.* [Fubby.] Short and stuffy.

"Seated upon the widow's little *fubsy* sofa."—*Marryatt: Snarleyow*, vol. i., ch. viii.

fū-cā'-çĕ-æ, *s. pl.* [Lat. *fuc(us)*; and fem. adj. pl. suff. *-aceæ*.]

Bot.: An order of Thallogens, alliance Algales. It consists of plants inhabiting salt, or more rarely fresh water. Frond of one or many cells, often divided into a trunk or leaf-like blade. Propagation by spores, contained in superficial cells, consisting of bladdery vesicles. The spores, which are simple, are external, which distinguishes them from those of Confervæ. The order has no geographical limits. Some species are eatable; these and others may also be burnt into kelp. Endlicher enumerated eighty-one genera, and estimated the known species at 452. The order is divided into the suborders Vaucheriæ, Halysereæ, and Fuceæ (q.v.).

***fū'-cāte, *fū'-cāt-ĕd,** *a.* [Lat. *fucatus*, pa. par. of *fuco* = to stain.] [Fucus.]

1. *Lit.:* Painted, stained.

2. Disguised; having an appearance calculated to deceive.

"In vertue may be nothing *fucate* or counterfayte."—*Sir T. Elyot: Governour*, bk. iii., ch. iii.

fū'-çĕ-æ, *s. pl.* [Lat. *fuc(us)*, and fem. pl. adj. suff. *-eæ*.]

Bot.: A sub-order of Fucaceæ (q.v.). The frond is polysiphonous, often with bladdery vesicles, seated in hollow conceptacles formed of a folding in of the frond, pierced by a pore, and surrounded by flocks; conceptacles scattered, or collected upon a receptacle. The suborder contains the tribes or families Lemanidæ, Fucidæ, and Cystoseiridæ.

fûch'-sĕ-æ, *s. pl.* [Mod. Lat. *fuchsia*, and Lat. fem. pl. adj. suff. *-eæ*.]

Bot.: A tribe of Onagraceæ, type Fuchsia (q.v.).

fûch'-si-a (more generally as **fū'-shĭ-a**), *s.* [So named from the discoverer, Leonard Fuchs, a German botanist.]

Bot. & Hortic.: A genus of Onagraceæ, tribe Fuchseæ, of which it is the type. Calyx funnel-shaped, four-parted, with the four petals set in its mouth alternately; stamens exserted; style one long, stigma capitate. More than fifty species are known; most from the warmer parts of America, Mexico, Peru, Chili, &c., except two from New Zealand. These beautiful plants are now common in gardens, conservatories, and flower-pots in windows. *Fuchsia fulgens* was introduced into England in 1837. About thirty-six other species are also cultivated here. The hybrids generated by intercrossing them now amount to some hundreds. Though they will grow in any light rich soil, yet they prefer a mixture of loam and peat. Young cuttings will root freely in sand or soil. If placed under a glass it must occasionally be removed for a time to give air and prevent undue damp.

¶ *Australian Fuchsia, Native Fuchsia:*

Bot.: The genus Correa.

fûch'-site, *s.* [Named after a mineralogist, Fuchs.]

Min.: A variety of Muscovite. It is sometimes called Chrome-mica, from containing nearly 4 per cent. of oxide of chrome. (*Dana.*)

fûch'-sĭne, *s.* [Eng. *fuch(sia)*; suff. *-ine*.]

Chem. & Comm.: [Rosaniline].

fū'-çĭ-dæ, *s. pl.* [Lat. *fuc(us)*, and fem. pl. adj. suf. *-idæ*.]

Bot.: A tribe or family of the suborder Fuceæ (q.v.). The conceptacles are not collected upon a receptacle. (*Lindley.*)

fū-çĭv'-ŏr-oŭs, *a.* [Lat. *fucus* (genit. *fuci*) = seaweed; *voro* = to eat, to feed on, and Eng. adj. suff. *-ous*.] Living on seaweed, a term applied to the Sirenia. The Dugong (q.v.) feeds on seaweed growing on large flats exposed at low water.

fū'-coid, *a. & s.* [Lat. *fuc(us)* = seaweed, and Gr. εἶδος (*eidos*) = form, appearance.]

I. *As adjective:*

1. Resembling a fucus or one of the Fucaceæ.

2. Containing plants or plant-impressions like those made by the larger seaweeds. (See the compounds.)

II. *As substantive:*

Palæont., Geol., &c.: An obscure fossil plant, like a fucus, or the impression of one.

"There the lowest beds have only been found to contain *fucoids* and a rare graptolite."—*Murchison: Siluria*, ch. ii.

fucoid-bed, *s.*

Geol.: The name given by Sir Roderick Murchison to a bed in the cliffs at Ludlow. It consists of a greenish-grey argillaceous sandstone, made up of a multitude of small wavy, rounded, stem-like forms, which resemble entangled seaweeds. They are of Upper Ludlow age. (*Murchison: Siluria*, ch. vi.)

fucoid sandstones, *s. pl.*

Geol.: The rendering of the name given in Sweden to sandstones with impressions like those of seaweeds. They lie at the base of the Cambrian strata. (*Lyell: Student's Elements of Geol.*)

fu-coid'-al, *a.* [Eng., &c. *fucoid*; *-al*.]

Bot.: The same as Fucoid, *a.* (q.v.).

"Bear also their *fucoidal* impressions blent with graptolites."—*H. Miller: Footprints of the Creator*, ch. xi.

fū'-cŭs, *s.* [Lat. = a seaweed, a rock lichen; Gr. φῦκος (*phukos*) = seaweed, seawrack, tangle.]

***I.** *Ord. Lang.:* A paint, a dye; any false or deceptive show. (*Lit. & fig.*)

"How do I look to-day?
Excellent, clear, believe it. This same *fucus*
Was well laid on." *Ben Jonson: Sejanus*, ii. 1.

II. *Botany:*

*1. *Formerly:* A very comprehensive genus of Algæ established by Linnæus. He included under it most of the more solid seaweeds, and enumerated fifty-four species.

2. *Now:* A more restricted genus, type of the order Fucaceæ (q.v.). It includes those social algæ which have a flat and compressed frond, sometimes with air vessels on or in the branches, and receptacles, filled with mucus,

FUCUS NODOSA.

traversed by a network of jointed filaments. It contains various common algæ, such as *Fucus nodosus, F. serratus, F. vesiculosus*, &c. These are used for the manufacture of kelp. In the Scottish islands, horses, cattle, and sheep are fed in the winter months on *F. vesiculosus*, as are pigs in Gothland. *F. serratus* is used for the same purpose in Norway. *F. vesiculosus* is sometimes ten feet long, *F. giganteus*, according to Capt. Cook, 360 feet. It is found near Terra del Fuego.

***fū'-cŭs,** *v.t.* [Fucus, *s.*] To paint.

fū'-cŭs-ăm-īde, *s.* [Eng., &c. *fucus*, and *amide*.]

Chem.: $C_{15}H_{12}N_2O_3$. Obtained by the action of ammonia on fucusol. It crystallizes from hot alcohol in groups of long needles,

fū'-cŭs-ĭne, *s.* [Eng., &c. *fucus*; *-ine* (*Chem.*).]

Chem.: $C_{15}H_{12}F_2O_3$. An organic base prepared by boiling fucusamide with aqueous potash for twenty minutes. It forms a

yellowish resin which melts into a brown oil; this is digested with nitric acid, the resin separates out, and the nitrate of fucusine crystallizes out: this is decomposed by a slight excess of ammonia, then the fucusine crystallizes out in small laminæ united in stellate groups.

fū'-cŭs-ŏl, *s.* [Eng., &c. *fucus*; Lat. *ol(eum)* = oil.]

Chem.: Fucusaldehydes, $C_5H_4O_2$, or $C_4H_3O \cdot CO \cdot H$. Obtained by distilling seaweed, *Fucus nodosus*, &c., with dilute sulphuric acid, and washing the distillate with water. Fucusol is a colourless oily fluid which boils at 172°, and rapidly turns dark coloured on keeping. Fucusol is converted by ammonia into fucusamide.

fŭd, *s.* [Welsh *ffwtog* = a short tail, a scut.]

1. *Ord. Lang.*: The scut, or tail of a hare, rabbit, &c.

2. *Cloth.*: Woollen waste; the refuse of the new wool taken out in the scribbling process, which is mixed with the mungo for use. [MUNGO, SHODDY.]

fŭd'-dẽr, *s.* [FOTHER.]

fŭd'-dle, *v.t.* & *i.* [Prob. a form of *fuzzle* or *muddle* (q.v.).]

A. *Transitive*:

1. To make stupid with drink; to muddle.

"The table floating round,
And pavement faithless to the *fuddled* foot."
Thomson: Autumn, 537.

2. To spend in drink; to lay out on drink.

B. *Intrans.*: To drink till one gets stupid; to drink to excess.

"Rhyme all the day and *fuddle* all the night."
Pitt: Horace, bk. ii., ep. 19.

* **fŭd'-dle,** *s.* [FUDDLE, *v.*] Drink.

"They have had their dose of *fuddle*."—*Bailey: Erasmus*, p. 125.

* **fuddle-cap,** *s.* A drunkard or boon companion.

"True protestant *fuddle-caps*."—*T. Browne: Works*, iii. 93.

fŭd'-dlẽr, *s.* [Eng. *fuddl(e)*; *-er*.] One who drinks to excess; a drunkard; a sot.

fŭdġe, *interj.* & *s.* [Prov. Fr. *fuche*, *feuche*, an interjection of contempt, from Low Ger. *futsch* = begone.]

A. *As interj.*: An exclamation of contempt: nonsense! stuff! humbug!

"At the conclusion of every sentence (Mr. Burchell) would cry out, *Fudge!*"—*Goldsmith: Vicar of Wakefield*, ch. xi.

B. *As substantive*:

1. Nonsense, humbug, stuff: as, That is all *fudge*.

"Her ladyship's proposition was what was called bosh . . . or *fudge* in plain Saxon."—*Thackeray: Rebecca & Rowena*, ch. i.

2. A wilful exaggeration; a falsehood.

"Very well; very genteel young man—prepossessing appearance—(that's a *fudge!*)—highly educated; usher in a school—eh?—*Lytton: Godolphin*, bk. ii., ch. vii.

fŭdġe, *s.* [A word occuring only in the compound.]

fudge-wheel, *s.*

Shoe-making: A tool to ornament the edge of a sole.

* **fudge,** *v.t.* [FUDGE, *interj.*]

1. To make up, to fabricate as a false story.

2. To interpolate; to foist in.

"That last 'suppose' is *fudged* in."—*Foote: The Bankrupt*, iii. 2.

* **fueille-morte,** *s.* [FEUILLEMORT.]

fū'-ĕl, * **few-el,** * **few-ell,** * **fu-elle,** * **fwaill,** *s.* [O. F. * *fouaille*, from Low Lat. *foallia* = fuel, from *focale* = fuel, the right of cutting fuel; Lat. *focus* = a hearth, a fire-place; Norm. Fr. *foualle*, *fouoyle*, *fuayl*.]

1. *Lit.*: The materials with which a fire is fed; the combustible matter, such as wood, coal, peat, &c., supplied to fires.

"Hard-faring race,
They pick their *fuel* out of every hedge."
Cowper: Task, i. 565.

2. *Fig.*: Anything which serves to feed or increase flame, heat, passion or excitement.

"He yields, not he to man nor Fate!
Thou add'st but *fuel* to my hate."
Scott: Lady of the Lake, v. 14.

¶ *Artificial fuel*: Agglomerated peat, saw-dust, coal-dust, and slack, one or more of them in various combinations, bound together by heavy pressure, with cements, clay, coal-tar, or the residuum of starch-manufacture.

fuel-dryer, *s.* A kiln for drying blocks of artificial fuel. The trays supporting the blocks of fuel run upon rollers upon the angle-iron bars secured in the walls. The walls have perforations to allow the escape of the vapours resulting from the drying of the blocks.

fuel-feeder, *s.* A device for feeding fuel in graduated quantities to a furnace, either for metallurgical purposes or for steam-boilers. [MECHANICAL STOKER.]

fuel-press, *s.* A machine for compressing coal-dust and a cementing material into a block.

* **fū'-ĕl,** *v.t.* [FUEL, *s.*]

I. *Literally*:

1. To feed with fuel or combustible matter.

"But first the *fuelled* chimney blazes wide!"
Thomson: Autumn, 502.

2. To store or supply with fuel or firing.

"Some are plainly œconomical, as that the seat be well watered and well *fuelled*."—*Wotton: Architecture*.

II. *Fig.*: To feed; to nourish.

"For more corruption needful is,
To *fuel* such a fever long."
Donne.

* **fū'-ĕl-lẽr,** *s.* [Eng. *fuel*; *-er*.] One who or that which supplies fuel.

"To retain fire unconsumed, Sir H. Plats hath obliged the *fueller*."—*Boyle: Works*, iv. 420.

fū'-ĕl-lĭṅg, *pr. par.*, *a.*, & *s.* [FUEL, *v.*]

A. & **B.** *As pr. par. & particip. adj.*: (See the verb).

C. *As subst.*: The act of feeding with fuel; fuel, firing.

fû-ēr'-ō, *s.* [Sp.]

Spanish Law:

1. A code, a charter, a grant of privileges.

2. A custom having the force of law.

5. To answer as a purpose or design.

"All we find possessing earth, sea, air, . . .
Fulfil the purpose, and appear designed."
Cowper: Tirocinium, 93.

¶ (1) Crabb thus discriminates between to *fulfil*, to *accomplish*, and to *realize*: "To *fulfil* is literally to fill quite full, that is, to bring about *full* to the wishes of a person; to *accomplish* is to bring to perfection, but without reference to the wishes of any one; to *realize* is to make *real*, namely, whatever has been aimed at. The application of these terms is evident from their explications: the wishes, the expectations, the intentions, and promises, of an individual, are appropriately said to be *fulfilled*; national projects, or undertakings, prophecies, and whatever is of general interest, are said to be *accomplished*; the fortune, or prospects of an individual, or whatever results successfully from specific efforts, is said to be *realized*." (*Crabb: Eng. Synon.*)

(2) For the difference between to *fulfil* and to *execute*, see Execute; for that between to *fulfil* and to *keep*, see Keep.

***full-fortuned,** *a.* At the height of prosperity.

***full-fraught,** *a.* Fully laden or stored with accomplishments.

"And thus thy fall hath left a kind of blot,
To mark the *full-fraught* man, and best endued,
With some suspicion." *Shakesp.: Henry V.,* ii. 2.

full-grown, *a.* Having attained full size or age.

"So beauty lures the *full-grown* child,
With hue as bright, and wing as wild."
Byron: Giaour.

***full-hearted,** *a.* Full of courage and confidence.

"The enemy, *full-hearted,*
Lolling the tongue with slaughtering."
Shakesp.: Cymbeline, v. 3.

***full-hot,** *a.* Heated to the utmost; very fiery.

"Anger is like
A *full-hot* horse who being allowed his way
Self-mettle tires him."
Shakesp.: Henry VIII., i. 1.

***full-laden,** *a.* Fully loaded; weighted to the full.

"It were unfit that so excellent a reward as the Gospel promises should stoop down, like fruit upon a *full-laden* bough, to be plucked by every idle and wanton hand."—*Tillotson.*

full-length, *a. & s.*

A. *As adj.:* Embracing or extending the whole length: as, a *full-length* portrait.

B. *As subst.:* A full-length portrait.

***full-manned,** *a.* Fully manned or furnished with men, as a ship with sailors.

***full-mouth,** *s.* A chatterer.

"Some propheticall *full-mouth.*" — *Greene: Menaphon,* p. 54.

***full-mouth,** *adv.* In full cry.

"She was coming *full-mouth* upon me."—*Farquhar: The Inconstant,* ii.

***full-mouthed,** *a.*

1. Pertaining to or issuing from a full mouth.

"Had Boreas blown
His *full-mouthed* blast, and cast thy houses down."
Quarles: Jonah.

2. Having a full or strong voice or sound; spoken *ore rotundo.*

"A *full-mouthed* diapason swallows all." *Crashaw.*

3. Festive, joyous.

"*Full-mouthed* Easter near."
Quarles: Emblems, v. 7.

***full-orbed,** *a.* Showing a full or complete disc, as a full moon.

"Now reigns
Full-orbed the moon, and with more pleasing light."
Milton: P. L., v. 42.

***full-out,** *adv.*

1. *Ord. Lang.:* Quite, altogether.

"Being *full-out* as evil, if not worse."—*Andrewes: Works,* ii. 351.

2. *Printing:* Not indented; occupying the full width of a page or column.

full-pitch, *s.*

Cricket: A ball delivered by the bowler so far up the wicket that it falls inside the popping-crease.

***full-replete,** *a.* Completely full or filled.

"*Full-replete* with choice of all delights."
Shakesp.: 1 Henry VI., v. 3.

***full-sailed,** *a.* Absolute, unlimited: as, *full-sailed* confidence. (*Massinger.*)

full-score, *s.*

Music: A score in which all the parts for voices and instruments are displayed. [SCORE.]

full-service, *s.*

Music:

1. A setting of the Canticles for voices in chorus, with or without organ accompaniment.

2. An office in which music is used to the fullest extent allowed by the rubrics.

***full-souled,** *a.* Magnanimous, noble-hearted; of a noble disposition.

***full-speak,** *v.t.* To declare plainly and fully; to show openly.

"His eye *full-speaks*
His ardent soul, and from his couch at once he breaks."
Thomson: Castle of Indolence, ii. 31.

full-split, *adv.* With the greatest violence or impetuosity. (*American.*)

full-spread, *a.*

1. Spread to the utmost extent.

"How easy 'tis, when destiny proves kind,
With *full-spread* sails to run before the wind."
Dryden: Astræa Redux, 64.

*2. Fat, corpulent.

"Waked by the crowd, slow from his bench arose
A comely *full-spread* porter, swoln with sleep."
Thomson: Castle of Indolence, i. 24.

full-stop, *s.*

I. *Ordinary Language:*

1. *Lit. & Gram.:* A period; a symbol used to denote the longest pause in reading.

2. *Fig.:* A finish, an end, a complete stop.

II. *Music:*

1. In lute playing, a full chord followed by a pause.

2. A chord in which all available fingers are occupied in stopping the strings.

***full-summed,** *a.* Complete in all its parts.

"The king of birds nested within its leaves, thick feathered, and with *full-summed* wings fastening his talons east and west."—*Howell: Vocal Forest.*

***full-winged,** *a.*

1. Having perfect or powerful wings.

2. Ready for flight; eager.

***fŭll** (1), *v.t. & i.* [FULL, *a.*] [FILL, *v.*]

A. *Transitive:*

1. To fill.

"Fiftene scipen gode *fulled* mid vliaghen."
Layamon, ii. 79.

2. To fulfil.

"That the saidis persons sall mak na payment of the said soume quhill the poyntis of the said decreet be *fullit* efter the forme of the samyn, and of the indenturis maid tharapone."—*Act. Dom. Conc.* (1492), p. 247.

B. *Intrans.:* To become full; to come or arrive at the full: as, The moon *fulls.*

"Whanne hir guttes *fullen.*" *P. Plowman,* 5,715.

fŭll (2), *v.t. & i.* [A.S. *fullian* = to whiten, to purify, to baptize, from Lat. *fullo* = to cleanse clothes, to full cloth; O. Fr. *fouller* = to full cloth; *fouler* = to trample on, to press; Ital. *follare.*]

A. *Transitive:*

*1. To cleanse cloth from its oil or grease.

2. To thicken in a mill, as cloth; to make thick and compact by pressure.

"Clooth that cometh fro the wevying is noght comly to were,
Til it be *fulled* under foot or in fullyng stobbes."
P. Plowman, 10,527.

†**B.** *Intrans.:* To become fulled or felted.

fŭll'-age (age as ĭj), *s.* [Eng. *full* (2), v.; *-age.*] Money paid for the fulling or cleansing of cloth.

***fŭl'-ham, *fŭl'-ham,** *s.* [From *Fulham,* a suburb of London, which was a notorious resort of blacklegs in the reign of Queen Elizabeth.]

1. False dice: of these there were two sorts, the one, called high, intended to throw the high numbers from five to twelve; the other, called low, to throw from one to four.

"For gourd and *fullam* holds
And high and low beguile the rich and poor."
Shakesp.: Merry Wives of Windsor, i. 3.

2. Any sham, fraud, or makebelieve.

fŭl'-lĕr (1), *s.* [Eng. *full; -er.*]

Forging:

1. A tool, sometimes known as a creaser, struck by the hammer or placed in the hardy hole of the anvil, and employed to swage down or spread the iron by a series of parallel indentations. The tools are known respectively as the top and bottom fuller.

2. A tool having grooves, and forming a die or swage into which iron is driven by the hammer to confer a shape. Used in forming the fullering of horseshoes.

fuller-hammer, *s.*

Forg.: The hammer used in striking the fuller.

fŭl'-lĕr (2), ***ful-lare,** ***ful-lere,** *s.* [Eng. *full* (2), v.; *-er;* O. Fr. *fouleur;* Dut. *voller.*] One whose occupation is to full cloth.

"The clothiers have put off
The spinsters, carders, *fullers,* weavers."
Shakesp.: Henry VIII., i. 2.

fuller's-earth, *s.*

1. *Min.:* (1) Smectite (q.v.); it is an argillaceous earth, used by fullers to absorb the oil or grease with which woollen cloth has been treated during previous manufacture. (2) Kaolinite (q.v.).

2. *Geol.:* A stratum belonging to the Lower Oolite of Bath, lying in that locality just below the Great Oolite, while in the North of England it is wholly absent. Its characteristic fossil is an oyster (*Ostrea acuminata*). In all about sixty mollusca are found in the Fuller's Earth, fifty being Lamellibranchiate Bivalves, ten Brachiopoda, three Gasteropods, and seven or eight Cephalopoda. (*Lyell.*)

fuller's-herb, *s.*

Bot.: The genus Saponaria (q.v.). It is called also Soapwort.

fuller's-teazel, *s.*

Bot.: *Dipsacus Fullonum,* probably only a variety of *D. sylvestris.* The flower heads are used for raising the nap on cloth which is being fulled. [FULLING, TEASEL.]

fuller's-thistle, fuller's-weed, *s.*

Bot.: *Dipsacus Fullonum.*

fŭl'-lĕr, *v.t.* [FULLER (1), *s.*] To form a groove or channel in as by a fuller hammer.

fŭl'-lĕr-ў, *s.* [Eng. *full* (2), v.; *-ery.*] A place where the process of fulling is carried on.

***fŭl'-lĭ-lў, *ful-la-lie, *ful-le-ly,** *a.* [Eng. *fully; -ly.*] Fully.

"Bot quhow ony historiall narratioun culd haue correspondit to sue inuisibill kirk, I can nocht *fulalie* perceaue."—*Tyrie: Refutation,* fo. 89, a.

fŭll'-ĭng, *pr. par., a., & s.* [FULL (2), *v.*]

A. & B. *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* A process by which cloth made of a felting fibre is condensed, strengthened, and thickened, with a loss of width and length. [FELT.] In felting, the fibres—wool, for instance—slip past each other, and their toothed edges interlock, so that a continuation of the process causes them to be more and more intimately associated. The cloth is folded or rolled, and treated with soapy water. It is then beaten with wooden mallets, by which the serrated edges are forced past each other and the fibres closely commingled. Precautions are taken in some cases to prevent adherence of the folds of cloth by felting together. For this purpose cotton cloth is sometimes put between the folds of woollen cloth. Fulling and felting are dependent upon the same principle. Felted cloth is made by associating the fibres, and is not woven. Woven cloth exposed to the fulling or felting action is said to be milled. Repetition of the process constitutes it double-milled or treble-milled, as the case may be. Each milling thickens and solidifies the cloth while diminishing its quantity.

fulling-mill, *s.* A mill for fulling cloth. The modern fulling-mill consists of an iron framework supporting the shanks of heavy wooden mallets, which are raised by projecting cams on a tappet wheel. The mallets being raised to their full height are released, and drop by gravity on the cloth, which is contained in an iron trough beneath. Soap is added as a detergent, grease in any form tending to mar the felting action of the fibres. The end of the trough is curved, so that the cloth is turned round and round by the action of the mallets.

"By the large hammers, like those used for paper and *fulling-mills,* they beat their hemp."—*Mortimer: Husbandry.*

fŭll′-mart, ful-mar (2), *s.* [FOUMART.]

fŭl′-lŏn-īte, *s.* [Named after Mr. Fullon, a brother-in-law of its discoverer, Mr. Armstrong.]

Min.: The same as Onegite (q.v.).

fŭl-lȳ, * **ful-liche,** * **ful-like,** *adv.* [A.S. *fullice;* O. Sax. *fulliho;* O. H. Ger. *follicho;* M. H. Ger. *volliche;* Ger. *vollig.*]

1. In a full manner; so as to leave no vacuity.

2. Completely; without deficiency or diminution; entirely; without lack or defect; perfectly.

"Behold Achilles' promise *fully* paid."
Pope: Homer; Iliad xxiii. 222.

fŭl′-mar (1), *s.* [Etym. doubtful; cf. *fulmar* (2).] [FOUMART.]

Ornith.: Fulmarus glacialis, a sea-bird which breeds in the Island of St. Kilda and elsewhere. It is abundant in the Arctic seas, attending whaleships for the sake of the blubber to be obtained when whales are being cut up.

fŭl′-mar (2), *s.* [FOUMART.]

fŭl′-mar-ŭs, *s.* [Latinized from Eng., &c. *fulmar* (1) (q.v.).]

Ornith.: Fulmar, a genus of natatorial (swimming) birds, family Procellaridæ, subfamily Procellarinæ. [FULMAR (1).]

* **fŭl′-mĕn,** *s.* [Lat.] A thunderbolt, lightning.

* **fŭl′-mĭn-ant,** *a.* [Lat. *fulminans,* pr. par. of *fulmino* = to lighten.] [FULMINATE *v.*] Thundering; making a noise like thunder; fulminating.

"The dread clergy, *fulminant* in ire."
Colman: Vagaries Vindicated, p. 194.

fŭl′-mĭn-āte, *v.i.* & *t.* [Lat. *fulminatus,* pa. par. of *fulmino* = to thunder, to lighten; *fulmen* (genit. *fulminis*) = thunder, lightning, a contr. for *fulgimen,* from *fulgeo* = to shine; Fr. *fulminer;* Sp. & Port. *fulminar;* Ital. *fulminare.*]

A. *Intransitive:*

I. *Literally:*

* 1. To thunder; to make a noise like thunder.

"I cannot *fulminate* nor tonitruate words
To puzzle intellects." *T. Randolph.*

2. To make a loud, sudden noise or crack; to explode with a loud noise or report; to detonate.

"Water and wind-guns afford no *fulminating* report."—*Browne: Vulgar Errours,* bk. iii., ch. v.

* **II.** *Fig.:* To thunder out censure, threats, or denunciations; especially applied to ecclesiastical censures sent out by the Pope.

"If the Pope had not run into the proposition he would have *fulminated* upon this occasion."—*Burnet: Hist. Reformation* (an. 1531).

B. *Transitive:*

* **I.** *Lit.:* To cause to explode.

II. *Figuratively:*

1. To utter or send out with threats, denunciations, or censure; to thunder out.

"An excommunication is not greatly regarded here in England, as now *fulminated;* so this constitution is out of use among us in a great measure."—*Ayliffe: Parergon.*

* 2. To denounce violently.

"Those branches of baleful prerogative, which they had so often *fulminated.*"—*Warburton: Works,* vol. x., ser. 19.

fŭl′-mĭn-āte, *s.* [FULMINATE, *v.*]

Chem.: A salt of Fulminic acid (q.v.).

Fulminate of mercury: Mercuric fulminate, fulminating mercury. It is prepared by dissolving one part of mercury in 12 parts of nitric acid; the solution is mixed with an equal volume of alcohol when cold. The mixture is then gently heated on a water-bath. Red vapours are given off of nitrogen oxides and CO_2, and a large quantity of nitrous ether, aldehyde, and other products. When the liquid becomes turbid it is allowed to cool, and the salt separates out; it is purified by recrystallization from boiling water. It forms white needles, which, when heated to 186°, explode, also by friction or percussion when dry. It is used for charging percussion caps; one kilogram of mercury will make fulminate sufficient for 40,000 caps. Fulminates have been regarded as methyl cyanide in which one atom of hydrogen has been replaced by NO_2, and two atoms of hydrogen by mercury or silver. The action of chlorine on mercuric fulminate under water forms chloropicrin, $CCl_3(NO_2)$, mercuric chloride $HgCl_2$, and cyanogen chloride CnCl; the formula of methyl cyanide is $N{\equiv}C-CH_3$, of silver fulminate $N{\equiv}C-C(NO_2)Ag_2$, and of mercuric fulminate is $N{\equiv}C-C.(NO_2)Hg$, if this view of the constitution of these bodies is correct. Hot nitric acid decomposes mercuric fulminate, yielding carbonic acid, acetic acid, and mercuric nitrate. Hydrochloric acid converts it into mercuric chloride and mercurous oxalate. When boiled with an aqueous solution of potassium chloride, it is converted into potassium fulminurate.

Fulminate of silver is obtained by heating nitrate of silver with strong nitric acid and alcohol till the liquid boils up. It is very dangerous to prepare. It crystallizes in small, white, opaque needles; it is very poisonous, and explodes by friction or percussion, or when heated. It is soluble in aqueous ammonia, and deposits the fulminate unaltered. When silver fulminate is digested with water and metallic copper or zinc, the silver is replaced and copper fulminate or zinc fulminate is obtained. When fulminate of copper is mixed with ammonia, and a stream of H_2S gas is passed through the solution, the copper is completely precipitated, and the filtered solution contains hydrosulphocyanic acid, HCNS, and urea, $CO{<}^{NH_2}_{NH_2}$.

Fulminate of gold was discovered by a monk in the fifteenth century. This substance, which explodes more rapidly and with greater local force than gunpowder, is made by precipitating a solution of chloride of gold by an excess of ammonia.

fŭl′-mĭn-āt-ĭng, *pr. par., a., & s.* [FULMINATE, *v.*]

A. *As pr. par.:* (See the verb).

B. *As adjective:*

1. *Lit.:* Thundering; explosive.

2. *Fig.:* Thundering out censures, threats, or denunciations.

C. *As substantive:*

1. *Lit.:* The act of exploding; explosion.

2. *Fig.:* The thundering or hurling out censures, threats, or denunciations.

fulminating-pane, *s.*

Elect.: A simple form of condenser, consisting of a glass plate fixed in a wooden frame with a piece of tinfoil on each side of the glass, with which, however, they are not quite in contact. This portion of the glass is generally covered with an insulating layer of shellac varnish. One of the sheets of tinfoil is connected with a ring on the frame by a strip of tinfoil, whilst a chain from it unites it with the ground. To charge it, its insulated side is connected with an electrical machine. If then the knob of the discharger is pressed against the lower surface of the frame whilst the other knob is brought near the upper coating, an electric spark will be emitted.

* **fŭl-mĭn-ā′-tion,** *s.* [Lat. *fulminatio,* from *fulminatus,* pa. par. of *fulmino;* Fr. *fulmination;* Sp. *fulminacion;* Ital. *fulminazione.*]

I. *Lit.:* The act of thundering, fulminating, or detonating; explosion.

II. *Figuratively:*

1. The act of thundering or hurling out censures, threats, or denunciations.

2. A violent censure, threat, or denunciation.

"By force of arms and with Papall curses and *fulminations.*"—*Camden: Elizabeth* (an. 1590).

* **fŭl′-mĭn-ą-tōr-ȳ,** *a.* [Fr. *fulminatoire;* from Lat. *fulminatus,* pa. par. of *fulmino.*] Sending forth thunders or fulminations; thundering.

* **fŭl′-mĭne,** *v.t.* & *i.* [Fr. *fulminer;* from Lat. *fulmino.*]

A. *Transitive:*

1. To shoot or dart as lightning.

"As it had been a flake
Of lightning through bright heaven *fulmined.*"
Spenser: F. Q., III., ii. 5.

2. To fulminate; to utter threateningly or violently. (Followed by *out.*)

"Warming with her theme
She *fulmined out* her scorn of laws Salique."
Tennyson: Princess, ii. 117.

B. *Intrans.:* To thunder, to fulminate; to speak with resistless power or energy.

"Shook the arsenal and *fulmined* over Greece."
Milton: P. R., iv. 267.

fŭl-mĭn′-ĕ-oŭs, *a.* [Lat. *fulmineus;* from *fulmen* (genit. *fulminis*) = thunder, lightning.] Of or pertaining to thunder; of the nature of thunder.

fŭl-mĭn′-ĭc, *a.* [Fr. *fulminique.*]

Chem.: Of or pertaining to, or capable of detonation.

fulminic-acid, *s.*

Chem.: $C(NO_2)H_2{\cdot}CN$. Fulminic acid has not been obtained in a free state. Its salts, of which the chief are those of silver and mercury, are called fulminates.

fŭl-mĭn-ūr′-ątes, *s.pl.* [Eng. *fulminur(ic); -ate* (*Chem.*).]

Chem.: Salts of fulminuric acid. They are obtained by boiling fulminate of mercury with alkaline chlorides. The other fulminates are obtained by double decomposition. When a solution of fulminuric acid is boiled with a solution of a cupric salt in excess of ammonium, the liquid, on cooling, deposits purple crystals of cuprammonium fulminurate, which are nearly insoluble in water.

fŭl-mĭn-ūr′-ĭc, *a.* [Eng. *fulmin(ic); -uric* (*Chem.*).]

fulminuric-acid, *s.*

Chem.: $C_3H_3N_3O_3$ Isocyanuric acid. It is obtained by decomposing the lead salt with H_2S gas or the silver salt with hydrochloric acid. It forms a crystalline mass soluble in hot water and in alcohol. When boiled with strong mineral acids it is decomposed, ammonia being formed and CO_2 liberated. Fulminuric acid, heated to 145°, explodes. It is monobasic, and forms salts called fulminurates. By the action of a mixture of strong nitric and sulphuric acids, fulminuric acid is converted into trinitro-acetonitril $C(NO_2)_3{\cdot}CN$.

fŭl-nĕss, * **ful-nesse,** *s.* [Eng. *full; -ness.*]

1. The quality or state of being full or filled.

2. The quality or state of abounding in any quality, whether good or bad.

3. Repletion, satiety.

"He felt the *fulness* of satiety."
Byron: Childe Harold, i. 4.

4. Completeness; such a state as leaves nothing to be desired.

"In thy presence is *fulness* of joy."—*Psalm* xvi. 11.

5. Completion; full extent, space, or duration.

"When the *fulness* of time was come, God sent forth his son."—*Galatians* iv. 4.

* 6. Plenty, affluence, wealth.

"To lapse in *fulness*
Is sorer than to lie for need."
Shakesp.: Cymbeline, iii. 4.

7. Copiousness, amplitude, extent.

"There wanted the *fulness* of a plot, and variety of characters to form it as it ought."—*Dryden.*

8. Strength, volume, body, or force.

"Thence the wort is strained, purified, and filtered, and passed into a copper with 20 per cent. of malt-flour, to impart *fulness* and flavour."—*Standard,* Oct. 18, 1881.

9. A struggling perturbation or swelling.

"A principal fruit of friendship is the ease and discharge of the *fulness* of the heart."—*Bacon: Essays: Of Friendship.*

¶ Crabb thus discriminates between *fulness* and *plenitude:* "Although *plenitude* is no more than a derivative from the Latin for *fulness,* yet the latter is used either in the proper sense to express the state of objects that are *full,* or in the improper sense to express great quantity, which is the accompaniment of *fulness;* the former only in the higher style and in the improper sense: hence we say in the *fulness* of one's heart, in the *fulness* of one's joy, or the *fulness* of the Godhead bodily; but the *plenitude* of glory, the *plenitude* of power." (*Crabb: Eng. Synon.*)

fŭl′-sŏme (1), * **ful-som,** * **ful-sum,** *a.* [Eng. *ful(l);* suff. *-some.*]

* 1. Rich, fertile, productive.

"The seven *fulsum* yeres faren."
Genesis & Exodus, 2,188.

* 2. Filled out; not lank and lean, or shrivelled.

"His lean, pale, hoar, and withered corpse
Grew *fulsome,* fair, and fresh."
Golding: Ovid; Metamorphoses xii.

* 3. Causing a surfeit; cloying.

"Honey [that of sound doctrine] which never *fulsome* is, yet fills
The widest souls."
Beaumont, in *French's Select Glossary,* p. 82.

* 4. Lustful, wanton.

"He stuck them up before the *fulsome* ewes." *Shakesp.: Merchant of Venice*, i. 3.

5. Offensive from excess of praise.

"She accordingly magnified in *fulsome* phrase that prerogative which was constantly employed to defend and to aggrandise her."—*Macaulay: Hist. Eng.*, ch. ii.

6. Disgusting, nauseous, offensive.

"Now this is *fulsome*, and offends me." *Cowper: Task*, ii. 455.

* 7. Rank; offensive to the smell.

"Of rank and *fulsome* smell."—*Bacon.*

* 8. Tending to obscenity.

"A certain epigram, which is ascribed to the emperor, is more *fulsome* than any passage I have met with in our poet."—*Dryden: Juvenal.* (Dedic.)

* **fûl-sôme** (2), *a.* [A. S. *fûl* = foul; suff. *-some.*] Disgusting, foul, gross.

"The *fulsomeste* freke that fourmede was evere." *Morte Arthure*, 1,059.

* **fûl′-sôme-hood, * ful-sum-hed,** *s.* [Eng. *fulsome* (1); *-hood.*] The quality of being fulsome; fertility, richness.

"Of win and olie *fulsumhed.*" *Genesis & Exodus*, 1,547.

fûl′-sôme-lȳ, * ful-sum-li, *adv.* [Eng. *fulsome* (1); *-ly.*]

1. Plentifully, freely; in plenty.

"Thann were spaeli spices spended al aboute, *Fulsumli* at the ful to eche freke ther wine." *William of Palerne*, 4,324.

2. Rankly, offensively.

"*Fulsomely* and loathsumely smelling."—*Newton: Herball to the Bible* (1587).

3. So as to disgust or nauseate; nauseously, rankly.

"*Fulsomely* described in the very words of the most modest among all poets."—*Dryden: Juvenal.* (Dedic.)

fûl′-sôme-nĕss, * ful-som-nes, * ful-som-nesse, *s.* [Eng. *fulsome* (1); *-ness.*]

* 1. Richness, plenty.

"Bochous schewed ther his *fulsomnes* Off holsome wynes to every maner wighte." *Lydgate: Minor Poems*, p. 14.

* **fu-mā′-dō,** *s.* [Sp., pa. par. of *fumar* = to smoke; Lat. *fumo.*] A smoked fish.

"Fish that serve for the hotter countries, they used at first to fume, by hanging them upon long sticks one by one, drying them with the smoke of a soft and continual fire, from which they purchased the name of *fumadoes.*"—*Carew: Survey of Cornwall.*

* **fūm′-age (age as ĭg),** *s.* [Lat. *fumus* = smoke.] A tax on every fire-place; hearth-money. (*Blackstone: Comment.*, bk. i., ch. 7.)

fūm′-ar-ātes, *s.* [Eng. *fumar(ic)*; *-ate.*]

Chem.: Salts of fumaric acid. Most of the fumarates are soluble in water; the silver salt is insoluble; they are insoluble in alcohol. Fumarate of ammonium or sodium gives a pale brown-red precipitate with ferric chloride, insoluble in excess of ammonium fumarate.

fu-mär′-ĭ-a, *s.* [Sp. & Port. *fumaria.* Sir Joseph Hooker believes the etymology doubtful. Generally said to be from Lat. *fumus* = smoke, referring to the smell of the plant. More probably because it was believed to be the "smoke of the earth."] [FUMITORY.]

Bot.: The typical genus of the Fumariaceæ (q.v.). The fruit is roundish, one-seeded, the seed not crested. Four species are British—(1) *Fumaria capreolata*, with four sub-species, called by Watson, a colonist; (2) *F. officinalis*, a common weed; (3) *F. densiflora* and (4) *F. parviflora*, with two sub-species. [FUMITORY.]

fu-mär-ĭ-ā′-çe-æ, *s. pl.* [Mod. Lat. *fumaria* (q.v.); Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: Fumeworts. An order of Hypogynous Exogens; alliance Berberales. It consists of herbs with brittle stems and a watery juice; leaves usually alternate, multifid, often with tendrils; sepals two, deciduous; petals four, cruciate, very irregular; stamens four, distinct, hypogynous, or six, in two parcels; ovary free, one-celled, style filiform; fruit either an indehiscent one or two-seeded nut or a succulent indehiscent polyspermous pod. They are a little bitter, and act as diaphoretics and aperients. The order is divided into two tribes, Hypecoeæ and Fumarieæ (q.v.). About 100 species are known. They are from the temperate and warmer parts of the Northern hemisphere, and from South Africa.

fu-mär-ĭ-ĕ′-æ, *s. pl.* [Mod. Lat. *fumari(a)*; Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: A tribe of Fumariaceæ, containing the genera with the stamens distinct in place of diadelphous.

fūm′-a-rōle, * fo-mer-ill, * fo-mer-al, *s.* [Low Lat. *fumerale*; Lat. *fumariolum*; Ital. *fumarolo*, from *fumo* = Lat. *fumus* = smoke.]

1. *Ord. Lang.:* A louvre or ventilator in a roof to let out smoke, &c.

"Lovir or *fomerill. Fumarium.*"—*Withals.*

2. *Geol.:* A hole in a volcanic or other region whence smoke issues.

fu-mär′-ĭc, *a.* [Mod. Lat. *fumar(ia)*; *-ic*]. Pertaining to or derived from Fumitory (q.v.).

fumaric acid, *s.*

Chem.: $C_4H_4O_4$, or $\begin{matrix} C-CO{\cdot}OH. \\ \| \\ C-CO{\cdot}OH. \end{matrix}$ A dibasic diatomic acid, which occurs in Fumitory (*Fumaria officinalis*), in Iceland Moss, and in species of Boletus. It can be obtained by the dry distillation of malic acid, when maleic acid distils over, leaving fumaric acid in the retort, and the crystalline mass is washed with cold water to remove unaltered malic acid; also obtained by heating malic acid for a long time at 150°. It is formed when dibromsuccinic acid is heated with potassium iodide solution; also by heating with baryta the product obtained by the action of ClO_2 on benzene C_6H_6. Fumaric acid crystallizes in colourless prisms, which are only slightly soluble in cold water, soluble in hot water, alcohol, and in ether. It sublimes at 200°, but a great part is converted into water and maleic anhydride. Fumaric acid is converted by sodium amalgam into succinic acid, $HO{\cdot}OC{\cdot}CH_2{\cdot}CH_2{\cdot}CO{\cdot}OH$. It forms acid and neutral salts, the silver salt, $C_4H_2O_4Ag_2$, is insoluble in water. It forms ethers; methyl fumaric ether, $C_2H_2(CO{\cdot}O{\cdot}CH_3)_2$, forms white crystals, which melt at 102°, and boil at 192°; the ethyl ether is a liquid boiling at 218°. Fumaric acid, dissolved in water, unites with metallic zinc, forming succinate of zinc.

fumaric aldehyde, *s.*

Chem.: $C_4H_4O_3$, or $\begin{matrix} CH-CO{\cdot}OH. \\ \| \\ CH-CO{\cdot}H. \end{matrix}$ It is formed by the action of chromic acid on pyromucic acid, with liberation of CO_2; also by the action of two molecules of bromine and water on pyromucic acid, $C_5H_4O_3 + 2H_2O + 2Br_2 = C_4H_4O_3 + CO_2 + 4HBr$. It is a syrup, which crystallizes with difficulty. (*Watts: Dict. Chem.*)

fu-măr′-ĭ-mīde, *s.* [Eng. *fumari(c)*, and *(a)mide.*]

Chem.: $C_4H_2O_2{\cdot}NH$. Obtained when acid malate of ammonium is heated to 200°. The red powder is exhausted with boiling water, and the liquid deposits a white powder of anhydrous fumarimide. When boiled for a long time with hydrochloric acid, it yields inactive aspartic acid, $C_2H_3(NH_2)\begin{matrix} \diagup CO{\cdot}OH \\ \diagdown CO{\cdot}OH \end{matrix}$.

fūm′-ar-īne, *s.* [Eng., &c. *fumari(a)*, and suff. *-ine* (*Chem.*) (q.v.).]

Chem.: A base obtained from *Fumaria officinalis.* It crystallizes in irregular six-sided prisms, soluble in alcohol, chloroform, and benzene, insoluble in ether, and sparingly soluble in water. The solution is bitter, and gives an alkaline reaction; with strong sulphuric acid it gives a dark violet liquid. Its salts are crystalline.

* **fû′-mart,** *s.* [FULMART.]

fūm′-a-rȳl, *s.* [Eng. *fumar(ic)*; *yl* = Gr. ὕλη (*hulē*) = matter.]

fumaryl-chloride, *s.*

Chem.: $C_4H_2O_2''Cl_2$. A compound, boiling at 160°. Formed by the action of phosphorus pentachloride on fumaric acid.

* **fūm′-a-tŏr-ȳ,** *s.* [FUMITORY.]

fŭm′-ble, *v.i. & t.* [Dut. *fommelen*; cogn. with Sw. *famle* = to grope; Dan. *famle*; Icel. *fálma.*]

A. *Intransitive:*

1. To grope about awkwardly.

"They asked him for his certificate, that they might go in and show it to the King; so he *fumbled* in his bosom for one, and found none."—*Bunyan: Pilgrim's Progress*, pt. i.

2. To act awkwardly or in an ungainly fashion; to move about like one confused.

"Alas! how he *fumbles* about the domains Which this comfortless oven environ." *Wordsworth: Written in Germany.*

* 3. To bungle in any business.

"Eche of them calleth other false *fumblinge* heretikes."—*Sir T. More: Works*, fo. 279.

* 4. To stammer, to stutter, to be confused.

"But being taken up in a trip and found *fumbling* in their answers, they were commaunded to void out of the counsel-chamber."—*P. Holland: Livius*, p. 1,150.

* 5. To wander.

"My hand trembles to that degree that I can hardly hold my pen, my understanding flutters, and my memory *fumbles.*"—*Chesterfield: Miscell. Works*, vol. iv., let. 71.

* **B.** *Trans.:* To handle or manage awkwardly; to confuse. (Followed by *over* or *up.*)

"His greasy bald-pate choir Came *fumbling o'er* the beads, in such an agony, They told 'em false for fear." *Dryden: Spanish Friar*, i. 1.

fŭm′-blĕr, *s.* [Eng. *fumbl(e)*; *-er.*] One who acts awkwardly.

"Playing at passage with a pair Of drunken *fumblers* for his fare." *Cotton: Epistle to the Earl of* ——.

fŭm′-blĭng, *pr. par., a., & s.* [FUMBLE.]

A. & B. *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* Awkward handling or management.

fŭm′-blĭng-lȳ, *adv.* [Eng. *fumbling*; *-ly.*] In a fumbling, awkward manner; awkwardly.

"For that is the reason, why many good schollars speake but *fumblingly.*"—*Ben Jonson: Discoveries.*

fūme, *s.* [O. Fr. *fum*, from Lat. *fumus* = smoke; Fr. *fumée*; Sp., Port., & Ital. *fumo.*]

A. *Intransitive:*

I. *Literally.*

* 1. Smoke.

"As from the fyre depertith *fume*, So body and sowle asondre gooth." *MS. in Halliwell*, p. 382.

2. A vaporous or smoky exhalation; volatile matter arising from anything; generally in the plural.

"Grosser sleep, Bred of unkindly *fumes*, with conscious dreams Encumbered." *Milton: P. L.*, ix. 1,050.

3. An exhalation; a smell.

"The fish whose liver gave forth such a *fume* as sent the devil flying from Ecbatana to Egypt."—*Macaulay: Hist. Eng.*, ch. xiv.

II. *Figuratively:*

* 1. Anything empty, fleeting, or unsubstantial: as, a vapour, an idle conceit.

"Memory, the warder of the brain, Shall be a *fume*, and the receipt of reason A limbeck only." *Shakesp.: Macbeth*, i. 7.

*2. Vanity, emptiness.

"They should go out in *fume*, and be forgot."
Cowper: Task, iii. 172.

3. Agitation of the mind; an angry mood; a passion.

"She, out of love, desires me not to go to
My father, because something hath put him
In a *fume* against me."
Shirley: Merchant's Wife, iv. 5.

*4. Praise, flattery.

"To send perfection with imperfect *fume*."
Davies: To Worthy Persons, p. 52.

*5. A passionate person.

"The notary's wife was a little *fume*."—*Sterne: Sentimental Journey; The Fragment.*

¶ *Fume of the Earth*: [FUMITORY].

* **fume-gallant**, *s.* A smoker.

"Let these *fume-gallants* enjoy their vanity."—*Venner: Treatise of Tobacco*, p. 412.

fūme, *v.i.* & *t.* [Fr. *fumer*, from Lat. *fumo* = to smoke; *fumus* = smoke; Sp. & Port. *fumar*; Ital. *fumare.*]

A. *Intransitive:*

I. *Literally:*

*1. To smoke; to throw off or emit smoke.

*2. To dry or cure by smoking.

"So corrosive is this smoke about the city, that if one would hang up gammons of bacon, beefe, or other fleshe to *fume*, and prepare it in the chimnies, it will so mummifie, drie up, waste and burne it, that it suddenly crumbles away, consumes and comes to nothing."—*Evelyn: Fumifugium*, pt. i.

3. To pass off in smoke or vapour.

"Even such is all their vaunted vanitie,
Naught else but smoke that *fumeth* soone away."
Spenser: Colin Clout's come out againe.

*4. To smoke tobacco.

II. *Figuratively:*

*1. To rise up, as a vapour.

"The one of them, when the wine had a little *fumed* up into the head, began both to speak and do foolishly."—*P. Holland: Plutarch*, p. 335.

2. To be in a rage or fury; to be hot with anger.

"He frets, he *fumes*, he stares, he stamps the ground."
Dryden: Palamon & Arcite, i. 446.

*3. To be as in a mist or fog; to be stupefied or confused.

"Keep his brain *fuming*."
Shakesp.: Antony & Cleopatra, ii. 1.

*4. To pass away as a vapour; to be dissipated

"Our heat is spent and *fumed* away in vapour."
Ben Jonson: Catiline, iii. 3.

***B.** *Transitive:*

1. To smoke; to dry or cure with smoke.

"Those that serve for hot countries they used at first to *fume*, by hanging them upon long sticks one by one, and drying them with the smoke of a soft fire."—*Carew: Survey of Cornwall.*

2. To fumigate; to perfume.

"*Fumed* with frankincense on every side."
Cowper: Truth, 314.

3. To dissipate in vapour. (Generally followed by *away*.)

"The heat will *fume away* most of the scent."—*Mortimer: Husbandry.*

4. To smoke, as tobacco.

5. To flatter.

"They demi-deify and *fume* him so."
Cowper: Task, v. 266.

* **fūme'-lĕss**, *a.* [Eng. *fume*; *-less.*] Without fumes; free from fumes.

* **fūm'-ĕr**, *s.* [Eng. *fum(e)*; *-er.*] One who scents or perfumes.

* **fūm'-ĕt**, * **few-met**, *s.* [Fr. *fumées*; Lat. *fimus* = dung.] The dung of the deer.

"For by his slot, his entries, and his port,
His frayings, *fewmets*, he doth promise sport."
Ben Jonson: Sad Shepherd, i.

* **fu-met-ere**, *s.* [FUMITORY.]

* **fu̦-mĕt'te**, *s.* [Fr. *fumet*, from Lat. *fumus* = smoke.] The scent or smell of game or meat when high.

"A haunch of venison made her sweat
Unless it had the right *fumette*." *Swift.*

fūme'-wôrts, *s. pl.* [Eng. *fume*, and *wort.*]

Bot.: The English name given by Lindley to the order Fumariaceæ (q.v.).

* **fūm'-ĭd**, *a.* [Lat. *fumidus*, from *fumus* = smoke.] Smoky, vaporous.

"Thus iron in aquafortis will fall into ebullition, with noise and emication, as also a crass and *fumid* exhalation."—*Browne: Vulgar Errours*, bk. ii.

* **fu̦-mĭd'-ĭ-tȳ**, *s.* [Eng. *fumid*; *-ity.*] The quality or state as being fumid or smoky; smokiness.

* **fūm'-ĭd-nĕss**, *s.* [Eng. *fumid*; *-ness.*] Smokiness, fumidity.

* **fu̦-mĭf'-ĕr-oŭs**, *a.* [Lat. *fumifer*, from *fumus* = smoke; *fero* = to bear, produce, and Eng. adj. suff. *-ous.*] Producing smoke.

* **fūm-ĭf'-u̦-ġĭst**, *s.* [Lat. *fumus* = smoke; *fugo* = to drive away; Fr. *fumifuge.*] One who or that which drives away or dissipates fumes.

* **fūm'-ĭ-fȳ**, *v.t.* [Eng. *fum(e)*; *i* connective; suff. *-fy.*] To impregnate with smoke.

"In order to *fumify* our immortalities."—*T. Browne: Works*, ii. 190.

* **fūm'-ĭ-ga̦nt**, *a.* [Lat. *fumigans*, pr. par. of *fumigo* = to smoke.] Fuming.

fūm'-ĭ-gāte, *v.t.* [Lat. *fumigatus*, pa. par. of *fumigo* = to smoke; *fumus* = smoke; Fr. *fumiger*; Sp. *fumigar.*]

1. To smoke; to apply smoke to; to expose to smoke or vapour; to free from infection by the use of vapours.

"But if a pinching winter thou foresee,
And wouldst preserve thy famished family,
With fragrant thyme the city *fumigate*."
Dryden: Virgil; Georgic iv. 350.

2. To scent.

*3. To eradicate or heal by vapours.

fūm-ĭ-gā'-tion, * **fum-i-ga-cion**, *s.* [Fr., from Lat. *fumigatio*, from *fumigatus*, pa. par. of *fumigo*; Sp. *fumigacion*; Ital. *fumigazione.*]

1. The act or process of fumigating, or applying smoke or vapour to, as for the purpose of disinfecting houses, clothes, &c.

"The said house whiche Solomon builte in Hierussalem, was a busie thing, with slaughter of beastes, with *fumigacions*, wyth washynges, and verai troubleous with perfumes."—*Udal: Luke* ch. xxiv.

¶ The principal substances used for fumigation to destroy infection, are chlorine and sulphurous acid, obtained by burning sulphur. If a brick is made hot in the fire and a wineglass of nitric acid poured on it, the nitrous fumes will destroy any infection, but metallic objects must first be removed, or they will rust, and of course no animal must be in the room during the fumigation.

2. A scent or vapour raised by heat.

"They [deuotion and knowledge] savour togither farre more sweetly than any *fumigation* either of juniper, incense, or whatsoeuer else."—*Fox: Martyrs*, p. 1,017.

fūm'-ĭ-gāt-ŏr, *s.* [Eng. *fumigat(e)*; *-or.*] One who or that which fumigates. Specif., an apparatus for applying smoke, gas, or perfume: (1) To destroy insects or vermin; (2) to destroy infection or miasma; (3) to diffuse a perfume through an apartment or ward; (4) To suffuse the lungs with a soothing or healing vapour. [INHALATION.]

* **fūm'-ĭ-ga̦-tŏr-ȳ**, *a.* [Fr. *fumigatoire*, from Lat. *fumigatus*, pa. par. of *fumigo*; Sp. *fumigatorio.*] Having the quality or power of cleansing by fumigation.

* **fūm'-ĭ-lȳ**, *adv.* [Eng. *fumy*; *-ly.*] With smoke; smokily.

fūm'-ĭṅg, *pr. par.*, *a.*, & *s.* [FUME, *v.*]

A. & **B.** *As pr. par. & particip. adj.*: (See the verb).

* **C.** *As substantive:*

1. The act of fumigating; a fumigation.

2. A vapour; an idle fancy.

"O fancie fond, thy *fumings* hath me fed."
Mirrour for Magistrates, p. 250.

fuming-box, *s.*

Photog.: In printing photographically, the sensitive paper, having chloride and nitrate of silver upon its surface, is exposed to the fumes of ammonia immediately before its exposure to light under the negative, the object being to secure greater depth and brilliancy in the resulting print. The apparatus for this purpose is simply a tight box, in which the sensitive sheets can hang, leaving a space below them for a flat basin containing ammonia. Boxes of this kind are variously constructed, the object in all cases being to admit of the ready introduction and removal of the sheets, as well as of the vessel containing ammonia, without subjecting the operator to unnecessary annoyance from the fumes.

* **fun,** *pret. & pa. par.* [FOUND.]

* **fu-năm'-bu-lant,** *s.* [Lat. *funis* = a rope, and *ambulans*, pr. par. of *ambulo* = to walk.] A rope-dancer.

* **fu-năm'-bu-lāte,** *v.i.* [Lat. *funis* = a rope, and *ambulatum*, sup. of *ambulo* = to walk.] To walk on a rope.

fu-năm-bu-lā'-tion, *s.* [FUNAMBULATE.] The act or art of walking on a rope; rope-dancing.

* **fu-năm'-bu-lā-tŏr-ĭ,** *a.* [Eng. *funambulat(e); -ory.*]

1. Performing like a rope-dancer.

2. Narrow; like the walk of a rope-dancer.

"Tread softly and circumspectly in this *funambulatory* track and narrow path of goodness."—*Browne: Christian Morals*, i. 1.

* **fu-năm'-bu-list,** *s.* [Lat. *funambulus.*] A rope-walker or rope-dancer.

* **fu-năm'-bu-lō,** *s.* [Sp., from Lat. *funambulus.*] A rope-dancer; a funambulist.

"We see the industry and practice of tumblers and *funambulos*."—*Bacon: Letters; To Sir Henry Saville.*

* **fu-năm'-bu-loŭs,** *a.* [Lat. *funambulus* = a rope-dancer.] Narrow as a rope.

"Tread softly and circumspectly in this *funambulous* tract."—*Browne: Letter to a Friend*, § 20, p. 147.

* **fu-năm'-bu-lŭs,** *s.* [Lat.] A rope-dancer.

"You have so represented —— unto me as methinks I see him walking not like a *funambulus* upon a cord, but upon the edge of a razor."—*Reliquiæ Wottonianæ*, p. 367.

fu-năr'-ĭ-a, *s.* [Fem. sing. of Lat. *funarius* = pertaining to a rope, from *funis* = a rope, line, or cord, in allusion to the twisted foot-stalks.]

Bot.: A genus of apocarpous mosses, the typical one of the tribe Funariei. The capsule is pear-shaped, the calyptra much inflated and vesicular below, subulate above. Minute mosses, growing in the winter and the spring in tufts on rocks and cottage roofs. *Funaria hygrometrica* is very common in England, especially on burnt soil. It is found also in many other parts of the world.

fu-năr'-ĭ-ā'-çē-æ, *s. pl.* [Lat. *funari(a)* (q.v.), and fem. pl. adj. suff. *-aceæ.*]

Bot.: A family of Funaroideæ (Acrocarpous Mosses). It consists of loosely-tufted or gregarious mosses, with monœcious inflorescence; type, Funaria (q.v.).

fu-na-rŏĭ'-dē-æ, *s. pl.* [Lat. *funaria* (q.v.), and Gr. εἶδος = form.]

Bot.: A sub-order of operculated Acrocarpous (terminal fruited) mosses, with broadly oval, spathulate leaves, pyriform apophysate capsules, the neck mostly bearing stomates on its epidermis. It is divided into two families—Funariaceæ and Splachnaceæ (q.v.).

fŭnc'-tion, *s.* [O. Fr., from Lat. *functio*, from *functus*, pa. par. of *fungor* = to enjoy, to perform; Fr. *fonction;* Sp. *funcion;* Ital. *funzione.* Puttenham, in 1589, ranked this with words of recent introduction into English.]

I. *Ordinary Language:*

1. The discharge, performance, or executing of any act, office, or duty.

"There is hardly a greater difference between two things than there is between a representing commoner in the *function* of his publick calling, and the same person in common life."—*Swift.*

2. An employment, office, duty, or occupation, belonging to or connected with any position, station, or character in life; the duties of any office.

"The agent of France in that kingdom must be equal to much more than the ordinary *functions* of an envoy."—*Macaulay: Hist. Eng.*, ch. xii.

3. A calling, office, or position.

"His sacred *function* was at length renounced."
Wordsworth: Excursion, bk. ii.

4. The specific office or action of any organ or system of organs in the animal or vegetable economy.

"All human bodies, for example, though each of them consists of almost an infinite number of parts, are perfectly uniform in their structure and *functions*."—*Beattie: Moral Science*, pt. ii., ch. i.

5. Any power or faculty.

"Nature within me seems
In all her *functions* weary of herself."
Milton: Samson Agonistes, 596.

II. *Technically:*

1. *Eccles.:* An office or service of the church.

2. *Math.:* Any algebraic expression or quantity dependent for its value on another one. Thus the circumference of a circle is a function of its diameter. A compound algebraic quantity may be a function of two others, or even of more than two. Thus, in the equation $y = Ax + Bx^2$, A and B being known quantities, y is a function of x, and in $y = Ax + Bz$, y is a function of x and z. The expression function of x is usually expressed by the symbols $f(x)$, $\phi(x)$, $\psi(x)$, or similar abbreviations, and the foregoing formulas would be thus expressed—

$$y = f(x),$$
$$y = f(x.z).$$

¶ *Calculus of functions:*

Math.: That branch of the differential calculus which investigates the form of functions rather than the value of any particular one.

* **fŭnc'-tion,** *v.i.* [FUNCTION, *s.*] To perform a function or duty.

"The momentous days when he was *functioning* at Culpeper Court."—*Pall Mall Gazette*, August 31, 1882.

fŭnc'-tion-al, *a.* [Eng. *function; -al.*]

A. *As adjective:*

Bot.: Pertaining to fungi.

B. *As substantive:*

Bot.: A plant belonging to the alliance Fungales (q.v.).

¶ *The Fungal Alliance:*

Bot.: The Alliance Fungales. (*Lindley.*)

fŭn-gā'-lēş, *s. pl.* [Mod. Lat., from Lat. *fungus* (q.v.), and fem. pl. adj. suff. *-ales.*]

1. *Bot.:* An alliance of Thallogens, corresponding to the old order Fungi. It consists of cellular, flowerless plants, nourished through their thallus, that is, through their spawn or mycelium; living in air; propagated by spores which are colourless or brown; sometimes enclosed in asci; and destitute of green gonidia. They are closely akin to Algæ, but grow in different situations—mushrooms, toadstools, &c., on green pastures, many other species on decaying trees, some on cereal grasses, potatoes, &c., which they destroy; others on books in damp situations, and some on man or animals labouring under certain diseases. In 1853 Lindley enumerated 598 genera, and conjectured that 4,000 species might have been described, which is probably but a small proportion of those actually existing. They abound in cold damp climates more than in the hotter parts of the world. The alliance is divided into six orders, with the following characters:—

(1) Hymenomycetes or Agaricaceæ. Spores generally quaternate, on distinct sporophores, hymenium naked.

(2) Gasteromycetes or Lycoperdaceæ. Spores generally quaternate, on distinct sporophores, hymenium enclosed in a peridium.

(3) Concomycetes or Uredinaceæ. Spores single, often septate, on more or less distinct sporophores, flocci of the fruit obsolete or mere peduncles.

(4) Hyphomycetes or Botrytaceæ. Spores naked, often septate; thallus floccose.

(5) Ascomycetes or Helvellaceæ. Sporidia contained (generally eight together) in asci.

(6) Physomycetes or Mucoraceæ. Spores surrounded by a vesicular veil or sporangium; thallus floccose.

2. *Palæobot.:* Fungi have been found as early as the Carboniferous period.

fung-ar, fung-er, *s.* [A Scotch pronunciation of *whinger* or *hanger* (q.v.).] A whinger or hanger.

"For persewyng & stryking him with ane drawin *fungar.*"—*Aberd. Reg.* (1538), v. 16.

* **fŭnġe,** *s.* [Lat. *fungus* = a mushroom.]

1. A mushroom. (*Wright.*)

2. A soft-headed fellow; a fool; one who has no more sense than a toadstool has substance.

"When, as indeed, in all wise men's judgments . . . they are mad, empty vessels, *funges.*"—*Burton: Anat. of Melancholy,* p. 113.

Cowper: Task, i. 552.

fŭn'-gŭs, *s.* [Lat. = a mushroom; cogn. with Gr. σφόγγος (*sphonggos*), σπόγγος (*sponggos*) = a sponge.]

1. *Bot.:* The singular of Fungi (q.v.). A term of comprehensive meaning, used for any plant belonging to the Fungal alliance, and in the same sense by the ordinary English public. Some botanists now use the term Fungal (q.v.) instead of fungus. [FUNGI.]

2. *Med.:* A morbid growth suggestive of a fungus, and generally dependent on the presence of vegetable parasites.

"This eminence is composed of little points called *fungus* or proud flesh."—*Sharp.*

fungus-bed, *s.*

Bot.: A "bed" for the growth of microscopic fungi. It consists of a small wooden box half filled with damp bog earth, and covered with a plate of glass. In winter it should be kept in a warm room. (*Griffith & Henfrey.*)

fungus-cellulose, *s.*

Bot.: The cellulose of which the cell-wall of fungi is composed. It is very rarely coloured blue by iodine and sulphuric acid. (*Thomé.*)

fungus-hæmatodes, *s.*

Pathol. & Surg.: A disease akin to and yet not quite identical with cancer, first described by Mr. John Burns in 1800 under the name Spongoid Inflammation, and then by Mr. Hey, of Leeds, in 1800, under the designation hæmatodes. The first word suggests that its growth is like that of a fungus; the second that it is bloody. It may appear in any part of the body, and may be encysted, irregularly compacted with cysts, or infiltrated in the tissue of an organ. From the resemblance which the tumour has to the brain it has been called cerebriform and cephaloid. It affects children more frequently than adults, and is generally fatal within two years, if not at an earlier period. The extirpation of the fungus in many cases fails to save the life.

fungus-melitensis, *s.*

Bot. & Pharm.: A plant (*Cynomorium coccineum*), sometimes used as a styptic.

fungus-pit, *s.* A pit in which fungi are grown.

fŭn'-ĭ-cle, *s.* [Lat. *funiculus* = a small cord; *funis* = a cord, a string.]

Bot.: The same as FUNICULUS, II. (q.v.).

fu-nĭc'-u-lăr, *a.* [Lat. *funicul(us)* = a small cord; *-ar.*]

I. *Ord. Lang.:* Consisting of a small cord or rope; formed by an aggregation of cords.

II. *Technically:*

1. *Mech.:* Dependent upon the tension of a cord.

2. *Archæol.:* Rope-shaped, twisted like a rope.

"Simple indeed as is the usual style of ornament and workmanship of the *funicular* torc, it appears to have been retained in use for a very long period."—*Wilson: Prehistoric Scotland*, i. 465.

funicular curve, *s.*

Statics: The curve in which a perfectly flexible string hangs when supported at the two extremities.

funicular-machine, *s.* A machine actuated by means of a cord whose ends are attached to two objects, and which bears a weight suspended from the bight. Some double-toggle presses come within the terms of this description. The name is principally applied to instruments illustrative of mechanical principles, and having a rope, pulley, and suspended weights.

funicular-polygon, *s.*

Statics: The figure assumed by a string supported at its extremities, and acted on by several forces.

fu-nĭc'-u-lāte, *a.* [Mod. Lat. *funiculatus*, from Class. Lat. *funiculus* (q.v.).]

Zool.: Having a narrow ridge like a string.

fu-nĭc'-u-lŭs (pl. **fu-nĭc'-u-lī**), *s.* [Lat. = a little cord.]

I. *Anatomy:*

1. The umbilical cord whereby the fœtus is connected with the placenta, or after-birth.

2. A number of nerve-fibres, inclosed in a tubular sheath, and forming a slender round cord of no determinate dimensions. (*Quain.*)

II. *Bot.:* A cord connecting a seed with the placenta. [FUNICLE.]

III. *Zool.:* A curious cylindrical appendage passing from the testis to the fundus of the stomach in the polyzoa.

fu-nīl'-ĭ-form, *a.* [Lat. *funis* = a rope, and *forma* = form, shape.]

Bot.: Formed of cord-like fibres.

fū'-ĭs, *s.* [Lat. = a rope.]

Bot. (*Of a calyx, corolla, &c.*): Having the tube obconical, gradually enlarging upwards with the limbs so as to constitute a funnel.

fŭn'-nel-form, *s. & a.* [Eng. *funnel*; *-form.*]

A. *As subst.:* The shape of a funnel.

B. *As adjective:*

Bot.: The same as FUNNEL-SHAPED (q.v.).

fŭn'-nelled, *a.* [Eng. *funnel*; *-ed.*] Having a funnel or funnels; funnel-shaped.

fŭn'-nĭ-lȳ, *adv.* [Eng. *funny*; *-ly.*] In a funny, droll, comical, or laughable manner.

fŭn'-nĭng, *a. & s.* [Eng. *fun*; *-ing.*]

A. *As adj.:* Jesting, droll, comical; causing fun or merriment.

B. *As subst.:* Jesting, joking.

fŭn'-nȳ, * **fun-nie,** *a.* [Eng. *fun*; *-y.*]

1. Droll, comical, laughable; causing mirth or laughter; full of merriment.

"Unco tales and *funnie* jokes."
Burns: Hallowe'en, xxviii.

2. Causing surprise; strange, curious.

fŭn'-nȳ, *s.* [Etym. doubtful.]

Naut.: A narrow, clinker-built pleasure-boat, to be rowed by a pair of sculls.

"The only attainable craft besides *funnies*, pair-oars, and randans, were a couple of six-oars."—*Field*, Jan. 28, 1882.

funny-bone, *s.* A popular name for that part of the elbow over which the ulnar nerve passes.

"He had merely received a blow on that part which anatomists call the *funny-bone*."—*Thackeray: Shabby-genteel Story*, ch. ix.

* **fŭnt'-stōne,** *s.* [FONTSTONE.]

fū-or, *s.* [Etym. doubtful.]

Carp.: A piece nailed upon a rafter to strengthen it when decayed.

fŭr, fŭrr, *s.* [A.S. *furh.*] A furrow.

"The bauld Piteur fell in a *furr*,
And Clavers got a clankie, O!"
Burns: Where Hae Ye Been?

fŭr (1), * **forre,** * **furre,** *s. & a.* [O. Fr. *forre*, *fuerre* = a sheath, a case; from an Old Low Ger. source; cf. Goth. *fodr* = a scabbard; Icel. *fóðhr* = lining; Fr. *fourrure* = fur, *fourreau* = a scabbard.]

A. *As substantive:*

I. *Ordinary Language:*

1. The soft fine hair growing thick upon certain animals, and distinguished from ordinary hair in being shorter and finer. Fur, in its usual trade acceptation, is the short, fine hair of certain animals, growing thick on the skin, and deprived of the long, coarse, protecting hairs.

"Cold would the winter be, for thick was the *fur* of the foxes."
Longfellow: Evangeline, i. 1.

2. The dressed skins of certain animals with soft, fine hair, with which garments are lined for warmth, or trimmed for ornament.

"Their arrow-heads are sharpened stones, or fish-bones, their thread being the sinews of certain small beasts, wherewith they sew their *furs* which clothe them."—*Milton: A Brief History of Muscovia.*

3. Any coating more or less resembling fur, as—

(1) A coat of morbid matter collected on the tongue.

"My pulse unequal, and my breath is strong;
Besides a filthy *fur* upon my tongue."
Dryden: Persius, sat. iv.

(2) A coat or crust formed on the interior of vessels by matter deposited from a liquid.

(3) The soft, downy covering on the skin of a peach.

II. *Her.:* Furs in heraldry are borne on the

shield and charges. They are either of one or more colours. Furs of two colours are ermine, ermines, ermois, peau, vair, vaire, varry, cuppa, and erminites. (See these terms.)

B. *As adj.:* Made of or pertaining to fur.

"December must be expressed with a horrid and fearful countenance; as also at his back a bundle of holly, holding in *fur* mittens the sign of Capricorn."—*Peacham: On Drawing.*

¶ Obvious compound, *fur-clad.* (*Cowper.*)

fur-cutter, *s.*

1. A machine for cutting the fur from the skin.

2. A mechanical contrivance for shaving the backs of peltry skins, to loosen the long hairs, leaving the fine fur undisturbed.

fur-dressing, *s.* The process of cleaning, cutting, and dyeing furs. The long hair that covers the fur is removed. The skins are placed on frames, and the inner surface pared off, until the roots of the hair are completely severed, while the roots of the fur remain untouched, on account of their nearness to the outside surface. The hair is then very easily removed, and the light yellow fur made ready for dyeing. Furs are dressed by greasing and tramping, or by beating in a fulling-mill, the skin being softened by the absorption of grease and the mechanical treatment. They are then wetted, fleshed, curried, tramped in vats with sawdust, and again with whitening to remove the grease. They are then beaten with a stick and combed.

fur-puller, *s.* A machine for removing from peltry skins long, straight hairs, before the fine hair is sheared off to furnish the material for felt. The skin is passed round the projecting edge of a bed, the tension of the skin being maintained by weights. As the skin is drawn forwards over the projecting edge of the bed, the long hairs stand out nearly at right angles, and are seized and extracted by ribs on a pair of revolving cylinders which are placed in front of the bed.

* **fur-wrought,** *a.* Made of fur.

"Silent along the mazy margin stray,
And with the *fur-wrought* fly delude the prey."
Gay: Pastorals, e. i.

fŭr, *v.t.* [FUR, *s.*]

I. *Ordinary Language:*

1. To cover, line, or trim with fur.

"The original painted by himself [Cleeve] with a black cap and *furred* gown, upon a greenish ground."—*Walpole: Anecdotes of Painting,* vol. i., ch. vi.

2. To cover or coat with morbid matter, as the tongue, or the interior of vessels.

"To make lampblack, take a torch and hold it under the bottom of a latten bason; and, as it groweth to be *furred* and black within, strike it with a feather into some shell."—*Peacham: On Drawing.*

II. *Carp.:* To nail pieces of timber to, as joists or rafters, in order to bring them into a level, and range them into a straight surface.

* **fŭr,** *a. & adv.* [FAR.]

* **fu-rā'-cious,** *a.* [Lat. *furax* (gen. *furacis*), from *fur* = a thief.] Given to thieving; inclined to steal; thievish.

* **fu-răc'-ĭ-tȳ,** *s.* [Lat. *furacitas,* from *furax* (gen. *furacis*) = thievish.] A disposition to steal; thievishness.

* **fur-age,** *s.* [Etym. doubtful.] Apparently, wadding.

"George Fleman fired a pistol in at the north side of the coach beneath his left arm, and saw his daughter dight of the *furage.*"—*Kirkton: History,* p. 416.

fŭr'-bĕ-lōw, *s.* [Fr. *farbala* = a flounce; Sp., Ital. & Port. *falbala,* a word of unknown origin.]

1. *Ord. Lang.:* A piece of stuff plaited and puckered together, either below or above, on petticoats and gowns; a flounce; the plaited border of a petticoat or gown.

"A *furbelow* of precious stones, a hat buttoned with a diamond."—*Addison: Spectator,* No. 15.

2. *Bot.:* A sea-weed, *Laminaria bulbosa;* or, according to Mrs. Gatty, *L. saccharina.* (*Britten & Holland.*)

* **fŭr'-bĕ-lōw,** *v.t.* [FURBELOW, *s.*]

1. *Lit.:* To attach a furbelow to; to furnish or ornament with furbelows.

"She was flounced and *furbelowed;* every ribbon was crinkled, and every part of her garments in curl."—*Addison.*

2. *Fig.:* To deck out; to ornament.

"[You] *furbelow* the plain discourse."
Prior: Alma, ii.

* **fur-ber-y,** *s.* [FOURBERY.]

fŭr'-bĭsh, * **for-bysch-yn,** * **fro-bish,** * **frub-bish,** *v.t.* [Fr. *fourbissant,* pr. par. of *fourbir* = to furbish, to polish; O. H. Ger. *furpjan;* M. H. Ger. *vürben.*]

1. *Lit.:* To rub to brightness; to polish up; to burnish.

"He commanded them to scour and *furbish* their harnesse and weapons before their tents."—*P. Holland: Livius,* p. 624.

2. *Fig.:* To prepare for fresh use something which has long lain disused. (Often followed by *up.*)

"Again they *furbish up* their holy trumpery."
Rowe: Lady Jane Grey, iii.

* **fŭr'-bĭsh-ą-ble,** *a.* [Eng. *furbish; -able.*] That may or can be furbished up.

fŭr'-bĭsh-ĕr, * **foor-bysch-owre,** * **for-bush-ere,** * **fro-bych-er,** *s.* [Fr. *fourbisseur.*] One who furbishes, polishes, or brightens up by rubbing.

"*Foorbyschowre. Eruginator.*"—*Prompt. Parv.*

fŭr'-cāte, fŭr'-cāt-ĕd, *a.* [Lat. *furca* = a fork; Eng. suff. *-ate, -ated.*]

Ord. Lang. & Bot.: Forked, dividing into two branches, like a two-pronged fork. (*Balfour.*)

fŭr-cāte'-lȳ, *adv.* [Eng. *furcate; -ly.*] In a forked manner.

furcately-divided, *a.*

Bot.: Divided in a furcate manner. (*Paxton.*)

fŭr-cā'-tion, *s.* [Lat. *furca* = a fork; Eng., &c. suff. *-ation.*] A forking, a branching out like the prongs of a fork.

"When stags grow old they grow less branched, and first lose their brow-antlers, or lowest *furcations* next the head."—*Browne: Vulgar Errours,* bk. iii., ch. ix.

* **fŭr-çĭf'-ĕr-oŭs,** *a.* [Lat. *furcifer* = one bearing the furca or gallows, a gaol-bird; *furca* = (1) a fork, (2) an instrument of punishment placed on the neck of criminals, and *fero* = to bear.] Scoundrelly, rascally.

fŭr'-cu-lą, fŭr-cu'-lŭm, *s.* [Lat. *furcula* = a forked prop to support a wall when undermined.]

Ornith.: The bone popularly called the merry-thought. It is composed of the two clavicles anchylosed together so as to form one bone, shaped like the letter **V.** Its outward extremities articulate with the scapula and coracoid.

fŭr'-cu-ląr, *a.* [Eng., &c. *furcul(a); -ar.*]

Ord. Lang., Anat., &c.: Shaped like a fork, branching into two divisions; furcate.

fŭr'-cu-lŭm, *s.* [FURCULA.]

* **fŭr'-dle,** *v.t.* [FARDEL.] To make or draw up into a bundle; to pack up.

"The rose of Jerico, being a dry and ligneous plant, is preserved many years, and though crumpled and *furdled* up, yet, if infused in water, will swell and display its parts."—*Browne: Miscellanies,* p. 34.

* **fŭrd'-lĭng,** *s.* [Eng. *furdl(e); -ing.*] The act or process of drawing or gathering into a bundle.

"Nor to urge the thwart enclosure and *furdling* of flowers, and blossomes, before explication."—*Browne: Cyrus' Garden,* ch. iii.

* **fure,** *v.t.* [Flem. *voeren* = to carry.]

1. To carry, especially by sea.

"That the act of frauchting and lading of schippis, mycht be put till executioun efter the tenour of the samin, and at na gudis be *furit* be the maister vpon his ouerloft."—*Acts Jas. III.,* 1487, c. cxxx. (ed. 1566).

2. To conduct, to lead.

"For thocht a man wald set his bissy curis,
Sae far as labour used his wisdom *furis.*"
Bellenden: Evergreen, i. 33.

* **fur-fell,** *s.* [Eng. *fur,* and *fell* (2).] A skin with the fur on it.

fŭr'-fŭr, *s.* [Lat. = bran.] Scurf or dandriff, resembling bran, growing upon the head.

"Leprosy, ulcers, itches, *furfures,* scabs."—*Burton: Anat. of Melancholy,* p. 231.

fŭr-fŭr-ā'-çē-oŭs (or **ceous** as **shŭs**), *a.* [Lat. *furfuraceus,* from *furfur* = bran.]

I. *Ord. Lang.:* Made of or resembling bran; of the nature of bran.

II. *Technically:*

1. *Pathology:*

(1) Resembling bran. A name given to eruptions in which the epidermis is detached in small scales resembling bran.

(2) A bran-like sediment observed at times in the urine.

2. *Bot.:* Scurfy; covered with soft scales, which are easily displaced.

fŭr-fŭr-ą-crȳl'-ĭc, *a.* [Lat. *furfur* = bran, and Eng., &c. *acrylic.*] For def. see compound.

furfuracrylic-acid, *s.*

Chem.: $C_4H_3O{\cdot}CH = CH{\cdot}CO{\cdot}OH$. Metameric with salicylic acid. It is obtained by boiling one part of furfural with four parts of acetic anhydride and two parts of sodium acetate for eight hours. The solution on cooling deposits a crystalline mass which dissolves in sodium carbonate, and on the addition of acid gives a precipitate of furfuracrylic acid which is obtained in white needles by recrystallization with animal charcoal. It melts at 135°. Strong sulphuric and hydrochloric acids turn it green.

fŭr'-fu-răl, *s.* [Lat. *furfur* = bran, and Eng., &c. *al(dehyde).*]

Chem.: $C_5H_4O_2$ or $\begin{array}{l} HO-C=C-CO{\cdot}H \\ \quad\;\; | \qquad\;\; | \\ \quad\;\; HC=CH \end{array}$.

Furfurol, the aldehyde of pyromucic acid. It is formed in the dry distillation of sugar, or by distilling bran with dilute sulphuric acid. One part of bran is distilled with one part of sulphuric acid diluted with three parts of water. The distillate is neutralized with soda, chloride of sodium is added, and then half of it is distilled over. It is then saturated with NaCl, which causes the furfural to separate as an oil. Furfural is a colourless liquid with an agreeable smell, resembling that of bitter almonds; it turns dark on exposure to the air; it boils at 162°; is very soluble in alcohol, and dissolves in eleven parts of water at 13°. It forms a crystalline compound with acid sodium sulphite, and is converted by sodium amalgam into furfuryl alcohol, $C_5H_6O_2$. By oxidation with silver oxide it yields pyromucic acid, and by nitric acid it is oxidized into oxalic acid.

fŭr'-fŭr-ą-mīde, *s.* [Lat. *furfur* = bran, and Eng., &c. *amide.*]

Chem.: $C_{15}H_{12}N_2O_3$, or $(C_5H_4O)^{\prime\prime\prime}3N_2$. An amide produced by the action of an aqueous solution of ammonia on furfural. It crystallizes from hot alcohol in colourless needles, which melt at 117°. It is soluble in alcohol and in ether, but insoluble in cold water. When boiled with water, or with acids, it is decomposed, yielding furfural and NH_3.

fŭr-fŭr-ā'-tion, *s.* [Eng. *furfur* (q.v.); *-ation.*]

Ord. Lang. & Path.: The falling of scurf or dandriff from the head.

fŭr'-fŭr-ĭne, *s.* [Lat. *furfur* = bran; *-ine* (*Chem.*).]

Chem.: An organic base isomeric with furfuramide, from which it is obtained by boiling with dilute aqueous potash, or by heating it to 120°. It forms crystals, which melt at 116°. It is sparingly soluble in cold water, easily soluble in alcohol and in ether. Its solution is strongly alkaline, and forms salts with acids, which have a bitter taste.

fŭr-fu-rō-bĕn'-zĭ-dĭn, *s.* [Eng. *furfur(al),* and *benzidin.*]

Chem.: $C_{12}H_8(N{\cdot}C_5H_4O)_2$. Obtained by allowing a solution of one part of furfural and one part of benzidin in fifty parts of alcohol stand for twelve hours. It forms small light yellow crystals which are insoluble in water, slightly soluble in cold alcohol, soluble in benzene. Unites with acids to form salts which, in solution, are of a carmine-red colour.

fŭr'-fu-rŏl, *s.* [FURFURAL.]

fŭr-fŭr-ō-prō-pĭ-ŏn'-ĭc, *s.* [Eng. *furfuro(l),* and *propionic.*] For def. see etym. and compound.

furfuropropionic-acid, *s.*

Chem.: $C_4H_3O{\cdot}CH_2{\cdot}CH_2{\cdot}CO{\cdot}OH$, formed by the action of nascent hydrogen from sodium amalgam and water on furfuracrylic acid, than which it is more soluble in water. It is extracted by ether from its aqueous solution, and is a colourless crystalline mass, melting at 51°. Hydrochloric acid turns it yellow.

* **fŭr′-fŭr-oŭs,** *a.* [Lat. *furfurosus.*] Made of or resembling bran; furfuraceous: as, *furfurous* bread.

fŭr′-fŭr-ȳl, *s.* [Lat. *furfur* = bran; *-yl* = Gr. ὕλη (*hulē*) = matter.]

Chem.: For def. see etym. and the compound.

furfuryl-alcohol, *s.*

Chem.: $C_5H_6O_2$. A thick colourless syrup, which is coloured green by hydrochloric acid. It is decomposed when distilled. Obtained by the action of sodium amalgam or furfural.

fŭr-fŭr-ȳl′-a̤-mīne, *s.* [Eng. *Furfuryl,* and *-amine.*]

Chem.: A base obtained by the action of zinc and sulphuric acid on the nitril of pyromucic acid. It is a liquid smelling like Coniine, boiling at 145°, and soluble in water.

* **fūr′-ĭ-a̤l,** * **fur-y-alle,** *a.* [Lat. *furialis.*] [FURY.] Furious, raging.

"Ye ben in the *furyalle* peyn of helle."
Chaucer: C. T., 10,761.

* **fūr′-ĭ-bŭnd,** *a.* [Lat. *furibundus,* from *furio* = to rage.] Raging; furious.

"The brawny, not yet *furibund* figure."—*Carlyle: French Revolution*, pt. i., bk. iv. ch. iv.

* **fūr′-ĭ-bŭnd-a̤l,** *a.* [Lat. *furibundus.*] Raging, furious, mad.

"The *furibundal* champion of fame."—*G. Harvey* (1,593).

Furies, *s. pl.* [FURY.]

fūr′-ĭl, *s.* [*Fur(furol)*; suff. *-il.*]

Chem.: $C_{10}H_6O_4$, or $C_4H_3O{\cdot}CO{\cdot}CO{\cdot}C_4H_3O$. Obtained by dissolving Furoïn caustic soda solution and passing air through it. It crystallizes out of chloroform in golden yellow needles, which are nearly insoluble in water, and slightly soluble in cold alcohol and ether. By the action of sodium amalgam it is reduced to Furoïn.

fūr-ĭ-ŏs′-a̤nt, *a.* [Ital. *furioso* = furious.]

Her.: An epithet applied to a bull or other animal when represented as in a rage or fury; also called Rangant (q.v.).

* **fūr-ĭ-ŏs′-ĭ-tȳ,** * **fur-i-os-i-te,** *s.* [Eng. *furious; -ity.*] The quality or state of being furious; fury; madness.

"That in tyme to cum the said breife be reformit, and a clause put tharin to inquere of the foly and *furiosite*, &c."—*Acts Jas. III.*, 1475 (ed. 1814), p. 112.

fūr-ĭ-ō′-ṣō, *adv.* & *s.* [Ital.]

A. *As adverb:*

Music: With fury, energy or vehemence.

* **B.** *As subst.:* A furious or impetuous man.

"A violent man and a *furioso* was deaf to all this."—*Hacket: Life of Williams*, ii. 218.

fūr′-ĭ-oŭs, * **fur-y-ous,** *a.* [Fr. *furieux,* from Lat. *furiosus,* from *furia* = madness; Sp. Port. & Ital. *furioso.*]

1. Mad, frenzied; deprived of one's senses.

"No man did ever think the hurtful actions of *furious* men and innocents to be punishable."—*Hooker: Eccles. Polity.*

2. Raging; violent; transported with fury or passion; frantic.

"Whet not on these *furious* peers."
Shakesp.: 2 Henry VI., ii. 1.

3. Rushing with vehemence or impetuosity; boisterous: as, a *furious* torrent.

¶ For the difference between *furious* and *violent*, see VIOLENT.

fūr′-ĭ-oŭs-lȳ, * **fur-i-ous-lie,** *adv.* [Eng. *furious; -ly.*] In a furious manner; with fury; madly, franticly; impetuously, violently, vehemently.

"So staies the streme when *furiouslie* it flowth."
Gascoigne: Dan Bartholomewe of Bath.

fūr′-ĭ-oŭs-nĕss, * **fur-i-ous-nesse,** * **fur-y-ous-nes,** *s.* [Eng. *furious; -ness.*] The quality or state of being furious; fury; frenzy; madness, impetuosity; transport of passion.

"Thou shalt stretche forth thyne hande upon the *furyousnes* of thine enemyes."—*Bible* (1551), *Ps.* cxxxviii.

fŭrl, * **farle,** * **furle,** *v.t.* & *i.* [A contract. of *fardle* (q.v.).]

A. *Transitive:*

1. *Naut.:* To roll a sail and confine it to the yard. The sail being gathered by the men on the yard, the leech is passed along the yard to the bunt, where the body of the sail, the foot and clews, are collected.

"The order those attend
To *furl* the mainsail, or on deck descend."
Falconer: Shipwreck, ii.

2. To roll or gather up anything. (*Dryden: Absalom & Achitophel*, ii. 837.)

B. *Intrans.:* To roll or gather together; to become furled.

"The banners drooped along their staves
And as they fell around them *furling*."
Byron: Siege of Corinth, ii.

¶ *To furl a top-sail in a body:*

Naut.: To gather all the loose parts of the top-sail into the bunt above the top-mast.

fŭr′-lŏng, * **four-long,** * **fur-lange,** *s.* [A.S. *furlang,* lit., a furrow-long, or the length of a furrow; *furh* = a furrow, and *lang* = long.]

* 1. Originally of vague meaning: the length of a furrow, whatever that might happen to be.

"A *furlong* comes next to be considered, so called *quasi* furrow-long, being so much as a team plougheth going forward, before they return back again."—*Fuller: A Pisgah Sight of Palestine*, p. 41.

2. A measure of length; the eighth part of a mile, equal to forty rods, poles, or perches, or two hundred and twenty yards.

"A *furlong* is the eyghte part of a myle and contayneth a hundreth and xxv. passes, which is in length vi. hundreth and xxv. fote."—*Bale: Image*, pt. iii.

fŭr′-lōugh (*gh* silent), * **fur-loe,** *s.* [Dut. *verlof* = leave, furlough; Dan. *forlov;* Sw. *förlof;* Ger. *verlaub.*] Leave of absence; specif., a license given to a soldier to be absent from duty for a certain time.

"He has got a *furlough* from his father for a year."—*Chesterfield: Miscell. Works*, vol. iv., let. 42.

fŭr′-lōugh (*gh* silent), *v.t.* [FURLOUGH, *s.*] To grant a furlough to; to grant leave of absence to.

furm, *s.* [FORM, *s.*]

fŭr′-mĕn-tȳ, fŭr′-mĭ-tȳ, *s.* [FRUMENTY.]

fŭr′-mĕr, *s.* [O. Fr. *fremoir.*] The name given by carpenters in Scotland to the tool called in England a flat chisel.

fŭr′-nace (**ace** as **ĕs**), * **for-nays,** * **for-nayse,** * **for-neys,** * **for-nes,** *s.* [O. Fr. *fornaise;* Fr. *fournaise,* from Lat. *fornax* (genit. *fornacis*) = an oven, from the same root as *formus* = hot; Ital. *fornace.*]

1. *Lit.:* A chamber in which fuel is burned for the production of heat. The two great ends to be attained in the construction of furnaces are, first, to produce as perfect a combustion of the fuel as possible; and secondly, to apply as much as possible of the heat so developed effectively. These two requirements for a good furnace are, however, not so easily satisfied. Much remains to be acquired as to the conditions under which the whole of the caloric may be perfectly developed from the fuel, although the best manner of applying the heat is well understood. [BLAST-FURNACE, REVERBERATORY-FURNACE.]

"As iron fusile from the *furnace* flows."
Brome: Battle of the Gods & Titans.

2. *Fig.:* Any time, place, or occasion of severe trial or torture; as, the *furnace* of affliction.

furnace-bar, *s.* A fire-bar (q.v.).

furnace-bridge, *s.* A barrier of fire-bricks, or of iron plates containing water, thrown across the furnace at the extreme end of the fire-bars, to prevent the fuel being carried into the flues, and to quicken the draft by contracting the area.

* **furnace-burning,** *a.* Hot, like a furnace.

"My *furnace-burning* heart."
Shakesp.: 3 Henry VI., ii. 1.

furnace cadmia, furnace calamine, *s.*

Metall.: An incrustation of oxide of zinc, with impurities, which forms round the throat of an iron furnace.

furnace-grate, *s.* The bars supporting the fuel in a furnace. [GRATE.]

furnace-hoist, *s.* An elevator for raising the ore, lime, and coal to the mouth of a blast-furnace.

furnace-pumice, *s.*

Metall.: A slag often produced in smelting pisolitic iron ores, having the cellular appearance of pumice-stone.

* **fŭr′-nace** (**ace** as **ĕs**), *v.t.* [FURNACE, *s.*]

1. To cast into a furnace.

"It has been proposed instead of *furnacing* the sulphate of soda, to decompose it by caustic baryta."—*Graham: Chemistry* (2nd ed.), i. 561.

2. To exhale like a furnace.

"He *furnaces*
The thick sighs from him."
Shakesp.: Cymbeline, i. 6.

fŭr-na̤-rī′-næ, *s. pl.* [Mod. Lat. *furnarius* (q.v.), and Lat. fem. pl. adj. suff. *-inæ.*]

Ornith.: A sub-family of Certhidæ (Creepers). The outer toe is not much longer than the inner one, and but slightly united at the base, the inner one is entirely free. The sub-family consists of small birds occurring in South America and the West Indies.

fŭr-när′-ĭ-ŭs, *s.* [Lat. = a baker.]

Ornith.: The typical genus of the sub-family Furnarinæ (q.v.). *Furnarius fuliginosus* is noted for its tameness.

* **fur-neye,** *v.t.* [O. Fr. *furnir, fornir;* Fr. *fournir* = to furnish (q.v.).] To furnish, to prepare, to provide.

5. *Print.:* The sticks and quoins which surround the matter in the chase. The pieces are about half an inch high, of various lengths, and are called head, foot, or side sticks, according to their position in the chase. Strips between the pages are gutters. The sticks are slightly tapering, so as to allow the wedge-shaped quoins to jam the matter firmly together in the chase. The quoins are driven by the shooting-stick and a mallet.

furniture-spring, *s.* A coil spring beneath the hair filling which forms the seat, back or side of a cushioned chair. A spring of a bed-bottom beneath a mattress, or forming the lower portion of one beneath the elastic material which constitutes the top.

fŭr′-ô-ĭn, *s.* [Eng. *Fur(furol)*; *o* connective, and suff. (*Chem.*) *-in.*]

Chem.: $C_{10}H_8O_4$, or $C_4H_3O{\cdot}CO{\cdot}CH(OH)$, C_4H_3O. Obtained by boiling for half an hour a mixture of forty parts furfurol with thirty parts of alcohol, eighty parts of water, and four parts of KCN. It crystallizes in fine prisms, which melt at 135°. Slightly soluble in ether and alcohol, soluble in hot water and in hot toluene. It dissolves in H_2So_4 with an intense blue-green colour. It is soluble in caustic soda solution, forming blue-green liquid, which is dark red by reflected light; it becomes colourless when exposed to the air, furil being formed.

fu-rō′le, *s.* [Fr.] A kind of meteoric light seen on the sail-yards of ships at night; a corposant (q.v.).

fu-rŏn′-ic, *a.* [Lat. *fur(fur)* = bran, and Eng. (*propi*)*onic.*] For def. see etym. and compound.

furonic-acid, *s.*

Chem.: $HO{\cdot}OC{-}CH = CH{\cdot}CO{\cdot}CH_2{\cdot}CH_2{\cdot}CO{\cdot}OH$ or $C_7H_8O_5$. Obtained by decomposing the silver salt with hydrochloric acid, extracting with ether, and recrystallizing from hot water. Furonic acid forms colourless needles which melt at 180°, and are slightly soluble in cold water and in ether.

furonic-aldehyde, *s.*

Chem.: $C_7H_8O_4$. Obtained by the action of bromine and furfurpropionic acid. By boiling the mixture with Ag(OH) moist silver oxide, it is converted into the silver salt of furonic acid.

***fū′-rōr,** *s.* [Lat.] Rage, fury, madness.

"He doubted much some inundation by their *furor* over all Italy."—*Sir T. Wyatt: To the King*, March 9, 1540.

fû-rör′-ê, *s.* [Ital.] Rage, fury; great excitement or enthusiasm.

fŭrred, *a.* [Eng. *fur*; *-ed.*]

"*Fuse* we alle to somne." *Layamon*, iii. 101.

B. *Trans.:* To hasten, to get ready.

"Brutus . . . hem to scipe *fuseie*." *Layamon*, i. 64.

fūṣe (1), *s.* [A shortened form of *fusee* (2) (q.v.).]

A tube or casing filled with combustible material, and used for igniting a charge in a mine or a hollow projectile. The invention was undoubtedly contemporaneous with that of hollow projectiles. The following are the principal varieties of fuses in use:—

(1) The *Bickford-fuse:* Used for mining and submarine purposes. It consists of a small linen tube filled with gunpowder, the whole being covered with pitch. It burns at the rate of one yard in seventy seconds.

(2) The *Blasting-fuse*, used in mining and quarrying. It is filled with a slow-burning composition, allowing time for the operatives to reach a place of safety before it burns down to the charge. It is also used for submarine blasting.

(3) The *Combination-fuse*, for hollow projectiles, comprises a time-fuse and a percussion or concussion-fuse united in the same case. The former is designed to explode the charge in case the latter fails to act on striking. Another form is that in which the time-fuse explodes the percussion-fuse. This variety is used with such explosives as dynamite and gun-cotton.

(4) The *Concussion-fuse*, for hollow projectiles; designed to explode the charge when the shell strikes an object.

(5) The *Delayed-action-fuse*, for use with common shell against earthworks. It causes the projectile to explode four seconds after impact.

(6) The *Electric-fuse* is one adapted to be ignited by the passage of an electric spark through it.

(7) The *Percussion-fuse* embraces a capsule charged with fulminate, which is exploded by a plunger or its equivalent, when the projectile strikes. The plunger is held by a pin sufficiently strong to keep it in place in case of a fall, yet weak enough to be severed by the shock of striking.

(8) The *Safety-fuse* is a cord or ribbon-shaped fuse filled with a fulminating or quick-burning composition, and sufficiently long to be ignited at a safe distance from the chamber where the charge is placed.

(9) The *Tape-fuse* is a safety-fuse, so called from its shape.

(10) The *Time-fuse* is one which is adapted either by cutting off a portion of its length or by the character of its composition to burn a certain definite time.

fuse-cutter, *s.* An instrument for ganging time-fuses to the desired seconds and fractions.

fuse-extractor, *s.* An implement designed for extracting wooden fuses from shells. It has jaws which grasp the fuse while the lower part of the extractor rests upon the shell. The jaws are attached to a screw, which works in a screw-socket in the body of the extractor, and has an iron lever passing through its head. The jaws being clasped around the projecting part of the fuse, it is drawn by turning the lever.

fuse-lock, *s.*

Min.: A spur on the spring attaches the lock to the fuse when the hammer is set. The dog is pulled by a long cord from a distant position of safety, releasing the hammer, which explodes the cap and lights the fuse.

fuse-saw, *s.* A tenon-saw used by artillery-men.

fuse-setter, *s.* An implement for driving home wooden fuses. It consists merely of a cylinder of wood or brass, with a recess at the end fitting the end of the fuse, which is driven into place by a mallet.

fuse-tape, *s.* A flat form of fuse, coated externally with pitch or tar, and served to prevent the coating from cracking, or covered with two warps and an interposed lap of cotton. Other forms might be noticed.

* **fūse** (2), **fu-ṣeē'** (1), *s.* [Etym. doubtful.] The track of a deer in the grass; any track.

"To trace those old Bishops in their *fuse*."—*Hacket: Life of Williams*, i. 14.

fu-ṣeē' (2), *s.* [A corruption of *fusel* or *fusil* (q.v.).]

*1. A firelock; a small, neat musket.

*2. A fuse (q.v.).

3. A kind of match for lighting a pipe, a cigar, &c.

fu-seē' (3), * **fu-zy,** *s.* [Fr. *fusée* = a spindle full of thread, from Low Lat. *fusata*, from *fusus* = a spindle.]

Hor.: A conical pulley used in connection with a spring, and designed to equalize the power of the latter. The spring is coiled within the barrel, and when fully wound up and at its greatest tension, the chain is wound upon the fusee and draws upon its smaller portion. As the fusee unwinds, by the motion of the train of gearing in the watch, the spring also uncoils and loses a part of its tension; as this proceeds, the chain draws upon a larger portion of the fusee, and attains an increased leverage on the latter to counterbalance the decreased power of the spring. The object is to obtain an equal power at all times, so that the watch may run regularly. The first wheel of a watch is attached to the fusee.

fusee-engine, *s.*

Hor.: A fusee-machine (q.v.).

fusee-machine, *s.*

Hor.: A machine for cutting the snail-shaped or spirally grooved wheel on which the chains of certain descriptions of watches are wound. It was invented by Dr. Hooke about 1655. It is interesting as being the first machine in which change-wheels were used, and is the germ of the screw-cutting lathe.

fusee-windlass, *s.* A pump-windlass with a conical barrel.

fū'-ṣel, *s.* [Ger. *fusel* = spirits of inferior quality.] (See the compound.)

fusel-oil, fuselol, *s.*

Chem. & Comm.: An oily product formed during the fermentation of potatoes, corn, and the juice of grapes. This is separated in the rectification of the spirit, occurring in the last part of the distillate as an acrid, oily liquid, having a peculiar odour and burning taste; it is poisonous, producing headache and nervous depression. The fusel-oil contained in potato spirit consists chiefly of ethylic and amylic alcohols. But that derived from other sources consists of a mixture of amylic alcohol with other alcohols and fatty acids. Thus propyl alcohol occurs in the fusel-oil obtained in the distillation of brandy from wine; isobutyl alcohol is the fusel-oil obtained by fermenting the molasses of beet-root sugar. Fusel-oil is removed by wood charcoal from spirits. It can be detected by rubbing some brandy, whisky, &c., on the hands and allowing the ethyl alcohol to evaporate, when the smell of fusel-oil can be recognised.

"Spirit so distilled from corn contains *fusel-oil*."—*Times*, Feb. 1, 1876.

fūṣ-ĭ-bĭl'-ĭ-tȳ, *s.* [Eng. *fusibl(e); -ity.*] The quality of being fusible; capability of being fused.

"The alloys of bismuth are remarkable for their *fusibility*. The amalgam of this metal is liquid."—*Graham: Chemistry*, ii. 249.

fūṣ'-ĭ-ble, *a.* [Fr., from Low Lat. *fusibilis*, from *fusus*, pa. par. of *fundo* = to pour, to melt.] Capable of being fused or melted; that may or can be melted or liquefied.

"The consistent phosphorus is *fusible* enough."—*Boyle: Works*, iv. 475.

fusible-alloy, *s.* An alloy, usually of lead, tin, and bismuth, compounded in such definite proportions as to melt at a given temperature.

fusible-calculus, *s.*

Pathol., Chem., &c.: A kind of urinary calculus easily fused by the blow-pipe.

fusible-metal, *s.* [FUSIBLE-ALLOY.]

fusible-plug, *s.* A plug placed in the skin of a steam-boiler, so as to be melted and allow the discharge of the contents when a dangerous heat is reached.

fusible-porcelain, *s.* A silicate of alumina and soda obtained from cryolite and sand, fused and worked as glass. One part of cryolite is mixed with two to four parts of quartz or pure sand, thus being a silicate of alumina and soda, containing some fluorine that has not been dissipated during the melting process. The material is easily wrought into any form, and may be readily ground and polished. It is stronger than common glass, and is said to withstand the fire better.

* **fus-ie,** *s.* [A corrupt. of Fr. *fosse.*] A ditch.

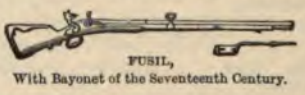
"And sall call before thame all suche persones as sall straite these passages, or vther wayes, by casting of ditches and *fusies* throche the same, sall mak thai hie wayis noyesum and trublesum vnto passangeris."—*Acts Jas. VI.*, 1617 (ed. 1814), p. 536.

fūṣ'-ĭ-form, *a.* [Lat. *fusus* (genit. *fusi*) = a spindle, and *forma* = shape, appearance.]

Bot.: Shaped like a spindle.

* **fūṣ'-il** (1), * **fūṣ'-ęl,** *s.* [Fr.; Ital. *focile, fucile*, from Lat. *focillus*, dimin. of *focus* = a hearth.]

Mil.: A firearm or musket, fitted with flint



FUSIL,
With Bayonet of the Seventeenth Century.

and steel. The fusil or firelock superseded the old matchlock musket. It seems to have been of the same length and calibre as, but lighter than the musket.

"A small anonymous Military Treatise, printed in the year 1680, says the *fusil* or firelock was then in use in our army."—*Grose: Military Antiquities*, i. 159.

fūṣ'-il (2), *s.* [Lat. *fusus* = a spindle.]

Her.: A bearing resembling a lozenge, but differing in being longer in proportion to its breadth. It is named from its somewhat resembling a spindle.

FUSIL.

"*Fusils* must be made long, and small in the middle; in the antient coat of Montague, argent three *fusils* in fesse gules."—*Peacham.*

fūṣ'-il-ādę, *s.* [FUSILLADE.]

* **fūṣ'-ĭle,** * **fūṣ'-il,** *a.* [Lat. *fusilis*, from *fusus*, pa. par. of *fundo* = to pour, to melt; Fr. & Ital. *fusile.*]

1. Capable of being fused or melted; fusible.

"Some, less skilful, fancy these scapi that occur in most of the larger Gothick buildings of England are artificial: and will have it that they are a kind of *fusil* marble."—*Woodward.*

2. Formed by melting or casting.

"First his own tools; then, what might else be wrought
Fusile, or graven in metal." *Milton: P. L.*, xi. 573.

3. Running or flowing, as melted metals; liquid.

"As iron *fusile* from the furnace flows."
Brome: Battle of the Gods & Titans.

fūṣ-il-ĭer', **fūṣ-il-eēr',** *s.* [Eng. *fusil* (1); *-ier, -eer.*]

Mil.: A soldier armed with a fusil, as distinguished from a pikeman or archer. The name is still given to several regiments of the line—the 7th regiment (raised 1685) being known as the Royal *Fusiliers*, the 20th (raised 1679) as the Lancashire *Fusiliers*, the 23rd (raised 1688) as the Royal Welsh *Fusiliers*, &c.

"There he was soon joined by a detachment of two hundred *fusiliers*, whom Mackay had sent forward to secure the pass."—*Macaulay: Hist. Eng.*, ch. xiii.

fūṣ'-il-lādę, * **fūṣ-il-ādę,** *s.* [Fr., from *fusil* = a musket.] A simultaneous discharge, as of firearms; a volley.

"O'er fields and orchards and o'er woodland crests
The ceaseless *fusillade* of terror ran."
Longfellow: The Poet's Tale.

* **fūṣ'-il-lādę,** *v.t.* [FUSILLADE.] To shoot down by a fusillade.

"That done, *fusillade* them all."—*Carlyle: Life of Sterling*, pt. i., ch. xiii.

fūṣ-ī'-nę, *s.* [Lat. *fusus* (q.v.), and fem. pl. adj. suff. *-inæ.*]

Zool.: A sub-family of Turbinellidæ, now generally merged in Muricidæ.

fūṣ'-ing, *pr. par., a. & s.* [FUSE, *v.*]

A. & B. *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* The act of melting, liquefying, or blending.

fusing-point, *s.* The degree of heat at which any substance begins to melt or liquefy.

fū'-ṣion, *s.* [Fr., from Lat. *fusio* = a melting, from *fusus*, pa. par. of *fundo* = to pour, to melt; Sp. *fusion*; Ital. *fusione.*]

A. *Ordinary Language:*

I. *Literally:*

1. The act of fusing, melting, or rendering liquid by means of heat.

"Common *fusion* in metals is also made by a violent heat."—*Browne: Vulgar Errours*, bk. ii., ch. i.

2. The state of being melted or liquefied by means of heat.

"Masses of matter struck off in a state of *fusion*."—*Paley: Nat. Theology*, ch. xxii.

II. *Fig.:* The act of blending or uniting intimately as melted metals combine; union.

"The saving resulting from the *fusion*, originally estimated by the advocates of that measure."—*Daily Telegraph*, Oct. 26, 1883.

III. *Chem.:* In the same sense as I. 1 (q.v.). Every substance begins to fuse at a certain temperature, which is invariable for each of them if the pressure be constant. Whatever be the intensity of the source of heat, from the moment fusion commences the temperature of the body ceases to rise, and remains constant until the fusion is complete. Some bodies have a definite fusing or melting point, as mercury at — 38.8°; ice, + 0; butter, + 32; phosphorus, + 44; sulphur, + 114; tin, + 228; lead, + 335; zinc, + 422; antimony, + 450; silver, + 1,000; gold, + 1,250; and iron, + 1,500. Some have no definite point of fusion, melting gradually. This is called vitreous fusion. (*Ganot.*)

fū'-ṣion-lĕss, *a.* [FISSENLESS.]

1. Weak, feeble.

2. Insipid, pithless, without substance.

"The wine! there was hardly half a mutchkin, and puir, thin, *fusionless* skink it was."—*Scott: St. Ronan's Well*, ch. xxxii.

fū-sĭ-spōr'-ĭ-ŭm, *s.* [Lat. *fusus* = spread out, extended, broad, large; and σπόρος (*sporos*) = . . . seed.]

Bot.: A genus of Hyphomycetous Fungi, forming first a mildew and next an extensive gelatinous stratum, with spindle-shaped spores. There are many British species. *Fusisporium atrovirens* is a destructive mildew on onions; *F. fœni* occurs in orange-red patches many feet wide; and *F. griseum* is common on dead leaves. (*Griffith & Henfrey.*)

* **fū'-sŏme,** *a.* [A.S. *fús* = ready; Eng. suff. *-some.*] Handsome, neat, notable.

fŭss, *v.i. & t.* [FUSS, *s.*]

A. *Intrans.:* To bustle about; to make much ado about nothing.

B. *Trans.:* To disturb with trifling matters.

fŭss, *s.* [A.S. *fús* = ready, quick; Icel. *fúss*; O. H. Ger. *fuus.*] A bustle, a tumult, unnecessary labour; much ado.

"That's the reason of this fawning *fuss*."
Byrom: Verses Intended to be Spoken.

fuss-ball, fuzz-ball, *s.* [FUZZBALL.]

fŭs'-sĭ-lȳ, *adv.* [Eng. *fussy; -ly.*] In a fussy bustling, or fidgety manner.

fŭs'-sĭ-nĕss, *s.* [Eng. *fussy; -ness.*] The quality or state of being fussy.

"The homely expression—absence of *fussiness*."—*Miall: Bases of Belief*, pt. iii., § 17.

fŭs'-sle, *v.t.* [FUZZLE.]

fŭs'-sŏck, *s.* [Etym. doubtful.] A large, fat woman.

fŭs'-sȳ, *a.* [Eng. *fuss; -y.*] Bustling, making a fuss about trifles; attended with fuss or needless bustle.

* **fŭst** (1), *s.* [FIST.]

fŭst (2), *s.* [O. Fr. *fust, fût* = a staff, a stave . . . fustiness; Ital. *fusta*, from Lat. *fustis* = a club, a staff.]

1. *Ord. Lang.:* A strong, musty smell, as of a cask; mustiness.

2. *Arch.:* The shaft of a column from the astragal to the capital.

* **fŭst** (3), *s.* [FOIST (2), *s.*] A light, fast-sailing vessel.

"The Admirall of Arracan, Marucha, was with his *fust*, taken and slaine."—*Purchas: Pilgrimage*, bk. v., ch. vi.

* **fŭst,** *v.i.* [FUST (2), *s.*] To grow or be fusty or mouldy; to smell ill.

"Gave us not
That capability and godlike reason
To *fust* in us unused." *Shakesp.: Hamlet*, iv. 4.

* **fŭst'-ĕd,** *a.* [Eng. *fust* (2), *s.*] Fusty, mouldy, ill-smelling.

"With a base bargain of his blowen ware
Of *fusted* hops, now lost for loss of sale."
Bp. Hall: Satires, bk. iv., sat. 5.

fŭs'-tŏr-ĭc, *s.* The yellow colouring matter derived from fustet.

fŭs'-tĕt, *s.* [Fr., Sp., & Port. *fustete*, from Lat. *fustis* = a club, a staff.] The wood of Fustic, 2.

fŭs'-tĭ-an, * **fus-tane,** * **fus-ti-en,** * **fus-teyn,** * **fus-ty-an,** *s.* & *a.* [O. Fr. *fustaine*, from Ital. *fustagno*, from Low Lat. *fustaneum, fustanium*, from *Fustát*, a name of Cairo in Egypt, whence the stuff first came (*Skeat*); Sp. *fustan*; Fr. *futaine*; Port. *fustão*.]

A. *As substantive:*

1. *Lit. & Fabric:* A kind of coarse twilled cloth, made of cotton, or cotton and linen mixed, and with a pile like velvet, but shorter. Velveteen or velveret are commonly included among fustians, as their manner of manufacture justifies. Corduroy and thickset are also coarser varieties of fustian.

"Of *fustyan* he wered a gepoun."
Chaucer: C. T., Prol. 75.

2. *Fig.:* A high swelling kind of writing; bombast; an inflated or pompous style.

"But if she frown, why farewell she
With all her medley trumpery,
With all her *fustian*, forced conceit,
And limping rhimes, and would-be wit."
R. Berkley: Verses to Cambridge.

B. *As adjective:*

I. *Lit.:* Made of fustian. [A. 1.]

II. *Figuratively:*

1. Bombastic; high-swelling; pompous; tumid.

"Virgil, if he could have seen the first verses of the Sylvæ, would have thought Statius mad in his *fustian* description of the statue on the brazen horse."—*Dryden: Dufresnoy.*

2. Using bombastic or pompous language.

"Let *fustian* poets with their stuff be gone."
Dryden: Persius, sat. v.

* **fŭs'-tĭ-an-ĭst,** *s.* [Eng. *fustian; -ist.*] One who makes use of pompous or bombastic language.

"Amobius or any modern *fustianist*."—*Milton: Apology for Smectymnuus.*

fŭs'-tĭc, *s.* [Fr. & Sp. *fustoc*, from Sp. *fuste* = wood, timber; Lat. *fustis* = a staff, a club.] A name given to certain yellow woods employed in dyeing.

1. *Maclura tinctoria*, a large tree of the Mulberry family (*Moraceæ*), native of the West Indies and tropical America.

2. *Rhus cotinus*, a bushy shrub of the Cashew Nut family (*Anacardiaceæ*), native of Southern Europe, having simple, shining, roundish leaves. Its flowers are in globose heads, which become white and feathery, giving the idea of a head of white hair, hence the name Wig-tree, by which it is sometimes known. It is used in dyeing, and is called in trade Young Fustic, to distinguish it from *Maclura*. The yellow wood of several species of the genus Xanthoxylon is also known by the name of Fustic.

fustic-wood, *s.*

Bot.: The same as 1.

* **fŭs'-tĭ-gāte,** *v.t.* [Late Lat. *fustigatus*, pr. par. of *fustigo* = to cudgel; *fustis* = a staff, a club.] To cudgel, to beat with a stick or cudgel; to cane.

"*Fustigating* him for his faults."
Fuller: Worthies; Westmoreland.

* **fŭs-tĭ-gā'-tion,** *s.* [Late Lat. *fustigatus*, pr. par. of *fustigo* = to cudgel; Fr. *fustigation.*] The act of cudgelling; punishment by cudgelling or caning.

"Six *fustigations* or displings about the parish church of Aldborough."—*Fox: Martyrs*, p. 609.

fŭs'-tĭn, *s.* [Eng. *fust(ic); -in* (*Chem.*).]

Chem.: A name given to the yellow colouring matter of *Rhus Cotinus.*

* **fŭs-tĭ-lăr'-ĭ-an,** *s.* [FUSTY.] A low fellow; a scoundrel.

"Away, you scullion, you rampallian, you *fustilarian*, I'll tickle your catastrophe."—*Shakesp.: 2 Henry IV.*, ii. 1.

* **fŭs'-tĭ-lŭg,** * **fŭs'-tĭ-lŭgs,** *s.* [FUSTY.] A gross, fat, unwieldy person.

"You may daily see such *fustilugs* walking in the streets, like so many tuns."—*Junius* (1639).

fŭs'-tĭ-nĕss, *s.* [Eng. *fusty; -ness*] The quality or state of being fusty; mouldiness; mustiness.

fŭs'-tȳ, *a.* [Eng. *fust; -y*; O. Fr. *fusté* = fusty, from *fuste* = a cask.] Mouldy, musty, rank, ill-smelling.

"The *fusty* plebeians hate thine honours."
Shakesp.: Coriolanus, i. 9.

fūs-u-lĭ'-na, *s.* [From Lat. *fusus* = a spindle.]

Palæont.: A genus of Foraminifera, family Nummulinida. It constitutes almost entire beds of the carboniferous formation in Russia, Armenia, and North America. It is found also in the British carboniferous rocks, and more sparingly in the Permian.

* **fū'-şūre** (**ş** as **zh**), *s.* [Lat. *fusura*, from *fusus*, pa. par. of *fundo* = to pour out, to melt.] The act of fusing or melting; smelting.

fūs-ŭs, *s.* [Lat. = a spindle.]

Zool.: A genus of Gasteropoda, family Muricidæ. Shell, fusiform; canal, long, straight; operculum, ovate curved; nucleus, apicol. Known recent species, 184: fossil, 320; these latter, perhaps, from the Bath Oolite, or at least the Gault, to the Eocene. *Fusus* or *Chrysodomus antiquus*, is the Buckie and Roaring Buckie of Scotland. [BUCKIE.] *Fusus colosseus* and *F. proboscidalis* are of large size.

* **fut,** * **fute,** *s.* [FOOT.]

fut-band, *s.* A guard of foot soldiers.

"Among other demands, they require the abolition of the *fut band*, or guard of infantry, which attended on James."—*Pinkerton: Hist. Scot.*, ii. 260, N.

fute-ale, *s.* A sort of entertainment given to those present, when a woman, who has borne a child, for the first time gets out of bed.

fŭtch'-ell, *s.* [Etym. doubtful.]

Carriage: The jaws between which the hinder end of a tongue is inserted; the similar parts in a waggon are called tongue-hounds.

futhork, *s.* [For etym. see def.]

Ethnol.: The Runic alphabet. The name Futhork is applied to all the systems of phonetic signs of the Teutonic stock, for the same reason as those of classical derivation are called "alphabet" or "abecedarium." They occur in the same order in Old German, Gothic, Anglo-Saxon, and Northern Runes, with a nomenclature in all of them borrowed from trees and other familiar natural objects, suggestive of the derivation of the series of phonetic symbols from a primitive system of pictorial writing. The Maeshowe inscriptions, discovered in 1861, render the first six runes, FUPORK.

"The Norse *Futhork* includes only sixteen runes, and these are for the most part simpler than the corresponding signs in the Anglo-Saxon *Futhork*."—*Wilson: Prehistoric Scotland*, ii. 285.

fū'-tile, *a.* [Fr., from Lat. *futilis* = easily poured out; *fundo* = to pour out; Ital. *futile*; Sp. *futil.*]

* 1. Talkative, loquacious, talking overmuch.

"As for talkers and *futile* persons, they are commonly vain and credulous withal."—*Bacon: Essays; Of Simulation & Dissimulation.*

2. Trifling, worthless, empty, of no weight or importance.

3. Vain, useless, of no effect.

¶ For the difference between *futile* and trifling, see TRIFLING.

fū'-tile-lȳ, *adv.* [Eng. *futile; -ly.*] In a futile, trifling, or useless manner.

fu-tĭl-ĭ-tär'-ĭ-an, *s.* [From *futilis*, as *utilitarian* from *utilis.*] One who pursues what is worthless.

"The whole race of Political Economists . . . Utilitarians and *Futilitarians*."—*Southey: The Doctor*, ch. xxxv.

fu-tĭl'-ĭ-tȳ, *s.* [Fr. *futilité*, from *futile* = futile (q.v.); Sp. *futilidad*; Ital. *futilità.*]

* 1. Talkativeness, loquacity, loquaciousness.

"This fable does not strike so much at the *futility* of women, as to the incontinent levity of a prying humour."—*L'Estrange: Fables.*

2. The quality of being futile, trifling, or worthless; worthlessness, emptiness, want of substance or weight.

"He was prepared to show the madness of their declaration of the pretended rights of man, the childish *futility* of some of their maxims."—*Burke: Appeal from the New to the Old Whigs.*

3. Uselessness.

* **fū-tĭl-īze,** *v.t.* [Eng. *futil(e); -ize.*] To make or render futile; to fritter away.

"The whole soul and essence is *futilized*."—*H. Brooke: Fool of Quality*, i. 213.

* **fū'-tĭl-oŭs,** *a.* [FUTILE.] Futile, worthless, trifling.

"Mankind hath an appetite of posthumous memory, which would be senseless, and to no purpose if there be no life but this; now God implants no instincts in his creatures that are *futilous* and in vain; and therefore hence also we may conclude, that there is a future being."—*Glanvill*, ser. 6.

fŭt'-tŏck, *s.* [A corrupt. of *foot, hook.*]

Shipwright.: One of the timbers in the compound rib of a vessel. A timber of the dimensions and form for the rib of a vessel cannot be procured in one piece: the rib is built up of pieces scarfed together. The number is according to the length of the sections of the requisite height. They are known as the first, second, and third futtock, terminated by the top-timber. [FRAME.]

"Every *futtock* lifts up its dismal creaking and wailing voice."—*Daily Telegraph*, Oct. 9, 1882.

futtock-hoop, *s.*

Naut.: A hoop encircling the mast at a point below the head, and serving for the attachment of the shackles of the futtock-shrouds.

futtock-plank, *s.*

Ship-build.: The first plank of the ceiling next to the keelson; the limber-strake. The first plank of the skin next to the keel is the garboard-strake.

futtock-plate, *s.*

Naut.: An iron plate on the edge of the top, to which the futtock-shrouds and the dead-eyes of the topmast shrouds are secured.

futtock-shrouds, *s. pl.*

Naut.: The short shrouds attached to the chain-necklaces on the mast, and to the sides of the top, by which ascent is had from the principal shrouds to the top.

futtock-stave, *s.*

Naut.: A short piece of rope served over with spun yarn, to which the shrouds are confined at the catharpings.

* **fū'-tūr-a-ble,** *a.* [Eng. *futur(e); -able.*] Possible or likely to occur at some future time.

"Extends not only to things future but *futurable*."
Fuller: Ch. Hist., XI. iii. 51.

fū'-tūre, *a.* & *s.* [Fr. *futur* (m.), *future* (f.), from Lat. *futurus* = about to be, fut. part. of *sum* (pa. t. *fui*) = to be; Sp., Port., & Ital. *futuro.*]

A. *As adjective:*

1. *Ord. Lang.:* That is to be, to come, or happen hereafter; to come.

"Past, present, *future* he beholds."
Milton: P. L., iii.

2. *Gram.:* Expressing or denoting an action or state to happen or come hereafter; as, a *future* tense.

B. *As substantive:*

1. *Ord. Lang.:* Time or times to come; events to happen hereafter; futurity.

"Thy letters have transported me beyond
This ignorant present time; and I feel now
The *future* in the instant."
Shakesp.: Macbeth, i. 5.

2. *Comm.:* A cargo of cotton not yet arrived in port, which often changes hands several times before it is unloaded.

¶ *To deal in futures:* (See extract).

"He *deals in futures*—i.e., speculates in cotton of Stock Exchange folks, or speculates in securities."—*Globe*, Dec. 1, 1882.

future-life, *s.*

I. *Ord. Lang.:* In the same sense as II.

II. *Composition:*

1. *Relig.:* A life to succeed this one; a life beyond the tomb.

(1) *Ethnic faiths:* The belief in a future life is very widely spread, many observers who have denied that it is entertained among certain tribes, indirectly confuting themselves by the facts which they put on record. In its early form no distinction is drawn between the souls of men and brutes; for both another state of existence is reserved. In the lowest form of Animism, a figure of a deceased friend appearing to a survivor in a dream, is supposed to be the actual soul of the person dead, whence faith in another state of existence becomes natural and easy. Two distinct forms of belief now diverge, the one leading in the direction of the transmigration of souls (q.v.), the other maintaining the independent existence of the personal soul after the death of the body. Among the lower races, the moral element in the doctrine of a future life is almost wholly wanting. (*Tylor.*)

(2) *Judaism:* There are but few allusions to a future life in the Old Testament. The most notable one is Dan. xii. 2, 3, in which the doctrine seems to be not simply the immortality of the soul, but the resurrection of the body. [(3).]

(3) *Christianity:* "Jesus Christ," says St. Paul, "hath abolished death, and hath brought life and immortality to light through the gospel" (2 Tim. i.). The doctrine in this case is not merely that of the immortality of the soul, not transmigrated, but retaining its separate individuality [IMMORTALITY]; there is superadded to this the resurrection and transformation of the body. [RESURRECTION.] The moral element in the doctrine of a future life is here all in all.

* **fū'-türe-lў̆,** *adv.* [Eng. *future; -ly.*] In the future; in time to come; hereafter.

"As for Duncombe's argument of building ships *futurely*, money may be had; the East India Company had it at four per cent. for the prizes."—*Parl. Hist. Charles II.* (1673).

fū-tür-ĭst, *s. & a.* [Eng. *futur(e); -ist.*]

A. *As substantive:*

1. *Ord. Lang.:* One who has regard to the future; an expectant.

2. *Theol.:* One who holds that the greater part of the New Testament prophecy, and even no inconsiderable portion of that in the Old Testament, is still unfulfilled.

"The second of these schools—the *Futurists*—has always been numerically small."—*Farrar: Early Days of Christianity*, ch. xxvii., § 2.

B. *As adj.:* Belonging to, or in any way connected with the school of interpretation described under A. 2.

* **fu-tür-ĭ'-tial (tial as shal),** *a.* [Eng. *futurity; -al.*] Pertaining or relating to futurity; future.

* **fu-tür-ĭ'-tion,** *s.* [Fr.] The state of being future, as to come, happen, or exist hereafter.

"Is it imaginable that the great means of the world's redemption should rest only in the number of possibilities, and hang so loose in respect of its *futurition*."—*South.*

fu-tür'-ĭ-tў̆, *s.* [Eng. *futur(e); -ity.*]

1. The quality or state of being future or to be; futurition.

"The bare possibilities, which never commence into a *futurity*."—*Glanvill: Scepsis Scientifica.*

2. Times to come; the future; future time.

"O sacred maid! inspired to see
The events of things in dark *futurity*."
Dryden: Virgil; Æneid vi. 10.

3. Future events; things to come.

"All *futurities* are naked before that All-seeing Eye, the sight of which is no more hindered by distance of time than the sight of an angel can be determined by distance of place."—*South.*

fūze, *s.* [FUSE, *s.*]

fu-zee' (1), *s.* [FUSEE.]

fu-zee' (2), *s.* [Etym. doubtful.]

Farr.: A kind of splint applied to the legs of horses.

fŭzz, *v.i.* [Onomatopoetic; cf. *fizz.*] To fly off in minute particles.

fŭzz, *s.* [FUZZ, *v.*]

1. Minute, light particles.

2. The same as FUZZBALL (q.v.).

"As touching all the sorts of mushromes, toadstooles, puffes, fusbals, or *fuzzes*, these particulars following are observed."—*P. Holland: Plinie*, bk. xix., ch. iii.

fŭzz'-bâll, * **fus-bal, fuss-ball,** *s.* [Eng. *fuzz*, and *ball.*]

1. *Bot.:* Lycoperdon, a genus of fungals, especially *L. Bovista.*

* 2. *Fig.:* An empty-headed fellow.

"Why, you empty *fuzzballs*, your heads are full of nothing else but proclamations."—*Dryden: Troilus & Cressida*, ii. 3.

* **fŭz'-zle,** * **fusle,** *v.t.* [A frequent. from *fuzz* (q.v.); cf. *fuddle.*] To fuddle, to intoxicate.

"My fine scholler was so *fusled*, that he no sooner was laid in bed, but he fell fast asleep."—*Burton: Anatomy of Melancholy*, p. 600.

fŭz'-zў̆, *a.* [Eng. *fuzz; -y.*] Light and spongy; consisting of light and loose particles.

"The thin membrane, or the inward and something soft and *fuzzy* pulpe it contains."—*Dr. H. More: Appendix to the Antidote*, ch. x.

-fў̆, *suff.* A verbal suffix, representing the Fr. *-fier* and Lat. *fio*, passive of *facio* = to make. It expresses the act of causing some thing to assume the form or state denoted by the word to which it is added.

fў̆, *interj.* [FIE.] An exclamation of disgust, disapprobation, contempt, or dislike.

fў̆ke (1), *s.* [Etym. doubtful.] A bag-net, open at one end, so as to allow fish to enter, but opposing their exit.

fў̆ke (2), *s.* [FIKE.]

fў̆ke, *v.i.* [FYKE (2), *s.*] To bustle about; to be fussy or fidgetty.

"Should ever daur to crook a hough to *fyke* and fling."—*Scott: Heart of Midlothian*, ch. x.

fў̆le, *v.t.* [A.S. *fȳlan.*] [FILE, *v.*] To soil, to dirty, to foul.

"And curses feet that *fyled* his shins,
Anither sighs and prays."
Burns: Holy Fair.

fў̆l'-fŏt, *s.* [Etym. doubtful. A correspondent of *Notes & Queries* (V. x. 437) suggests that *fylfot* may be a corruption of O. Eng. *fuel*, or A.S. *fugel* = fowl and A.S. *fōt* = foot, and so = bird-foot; and that the symbol represented in the Northern nations the beneficent footprints of Swan-maidens (q.v.). Cf. Grimm's *Deutsches Wörterbuch*, s.v. *Drudenfuss.*]

Comparative Religions:

1. *Ethnic:* This symbol, like the cross of which it is in all probability a modification, is confined to no one religion, but is common to the great majority. In India the well-known sign of the fylfot is the Swastika of the Buddists; in Greece we find it as stamped on coins and painted on urns; on the breast of an Etruscan sphinx it assumes a shape like the arms of Man, with a fourth leg added; four different forms of it are found on as many cinerary urns discovered under a bed of volcanic tufa on the Alban Mount; again we meet with it as the cruciform hammer of Thor, and sculptured on Runic monuments. In some of its forms it resembles the *crux ansata* of the Egyptians, and it was in use among the early inhabitants of South America. When the fylfot occurs in Asia Minor, Greece, Etruria, or Latium, it is probably connected with some system of phallic worship; but it has not, in all cases, a religious significance. Greenwell, speaking of pottery ornamented with crosses found in British barrows, considers this pattern to be the natural result of dividing a given space into four equal parts, though in one case, he says, the marking "almost assumes the form of the fylfot." Dawkins (*Early Man in Britain*) figures pottery marked with this emblem, and says of the pottery of the late Bronze Age in France, that "sometimes it is ornamented . . . with the mystic fylfot" (p. 389).

2. *Christian:* [GAMMADION].

* **fў̆ne,** *a.* [FINE, *a.*]

* **fў̆t,** * **fytt,** * **fytte,** *s.* [FIT, *s.*]

* **fyyre,** *s.* [Mid. Eng. *fyyre* = fire.] The Star-thistle. (*Prompt. Parv.*) (*Britten & Holland.*)

G.

G, the seventh letter and fifth consonant of the English alphabet, is formed by arching the tongue against the hinder part of the roof of the mouth, then lowering the tongue and giving utterance to voice. *G* has two sounds in English, one *hard* before *a, o, u*, as in *gate, god, gun* (except in *gaol*), and when initial, always before *e* and *i* in all words of English origin, as in *get, give*, and when final, as in *bag*; as also before the consonants *l* and *r*, as in *glow, grow*; the second sound of *g* is *soft*, and is a palatal sound like *j*. This second sound of *g* was unknown in Anglo-Saxon. It is the voiced sound corresponding to the breathed sound of *ch* as in *church*. It is the sound which *g* has commonly before *e, i*, and *y*, as in *gem, gin, gymnastics*. *G* is silent before *n*, as in *gnat*, when at the beginning of a word, and at the end of a word it generally serves to lengthen the vowel, as in *benign*. In form *G* is a modification of *C*, which in the Roman alphabet had the same power. The A.S. *g* is in many words now represented by *y*, as in *may* (verb), *way* (A.S. *wæga*), or *w*, as in *law* (A.S. *lagu*), *dawn* (A.S. *dagian*). Sometimes it has been softened down to *a, e*, or *i*, as in *alike* (A.S. *gelic*), *enough* (A.S. *genoh*), *handiwork* (A.S. *handgeweorc*). Sometimes it is lost in the root, and makes its appearance in the derivative, as in *dry* and *drought*, *slay* and *slaughter*, &c. From some words it has disappeared altogether, as in *if* (A.S. *gif*), *icicle* (A.S. *isgicel*), &c. It has been softened to *ge* (= *j*), as in *cringe* (A.S. *cringan*), and to *ch* in *orchard* (A.S. *ortgeard*). In Romance words *g* often disappears, as in *master* (Lat. *magister*). It has crept into some words (generally from false analogy), as in *sovereign, foreign* (O. Fr. *soverain, forain*). *Ec, Eg* has often become *ge* (= *j*), as in *edge* (A.S. *ecg, egg*). *Gh* has a guttural sound, as in *lough*, the sound of *f*, as in *tough*, and in many words is not sounded, as in *bright, plough*.

G, as a symbol, is used—

1. *In numerals:* For 400, and with a dash over it, $\bar{G}$, for 40,000.

2. *In music:*

"Did ever any men see sic a set of green *gaislings!*"
—*Scott: Bride of Lammermoor*, ch. xxv.

gāist (1), *s.* [Guest.]

gāist (2), *s.* [Ghost.]

gaist-coal, *s.* A piece of dead coal, that, instead of burning, appears in the fire as a white lump.

gāit (1), *s.* [Goat.]

1. *Lit.:* A goat.

2. A name given to a silly, simple-minded person.

"To scorn the poor silly *gait* of a lassie after he's keepit company wi' her sae lang."—*Scott: Antiquary*, ch. xv.

gait-berry, *s.* An old name for the bramble-berry.

gāit (2), *s.* [Icel. *gata* = a road, a way; Sw. *gata* = a street; Dan. *gade* = a street; Ger. *gasse*; Goth. *gatwo*; M. H. Ger. *gazze.*]

1. A path, a course, a way.

"I descried his way
Bent on all speed, and marked his aery *gait*." *Milton: P. L.*, iv. 568.

2. A street.

"Wes to be sene on Edinburgh *gaits*,
Fra time that brauitie began." *Burel: Watson's Coll.*, ii. 5.

gala-dress, *s.* Holiday dress; finery.

găl-ạ-çĭn'-ĕ-æ (1), *s. pl.* [Gr. γάλα (*gala*), genit. γάλακτος (*galaktos*) = milk, and Lat. fem. pl. adj. suff. *-ineæ.*]

Bot.: The name given in 1828 by Don to an order of plants now called Francoaceæ.

găl-ạ-çĭn'-ĕ-æ (2), *s. pl.* [From Mod. Lat. *galax* (genit. *galacis*) (q.v.), and Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: A tribe of plants of somewhat doubtful place in the system. Lindley ranks it under the Pyrolaceæ; some botanists under the Diapensiaceæ.

gạ-lăc'-tạ-gŏgues, *s. pl.* [Galactogogues.]

gạ-lăc'-tĭ-ạ, *s.* [Gr. γαλάκτιον (*galaktion*) = a little milk, dimin. of γάλα (*gala*) = milk.]

Bot.: A genus of papilionaceous plants, subtribe Glycineæ. *Galactia pendula*, a native of Jamaica, is a pretty flowering climber, cultivated in Britain.

gạ-lăc'-tĭc, *a.* [Gr. γάλα (*gala*), genit. γάλακτος (*galaktos*) = milk; Eng. adj. suff. *-ic.*]

1. *Ord. Lang.:* Of or belonging to milk; obtained from milk.

2. *Astron.:* Of or relating to the Galaxy or Milky Way.

"Around the poles of the *galactic* circle."—*H. Spencer: Instability of the Homogeneous.*

galactic-circle, *s.*

Astron.: The name given by Sir John Herschel to the circle of the heavens most nearly agreeing with the direction of the Milky Way.

galactic-poles, *s. pl.*

Astron.: The poles of the galactic circle.

gạ-lăc'-tĭn, gă-lăc'-tĭne, *s.* [Gr. γάλα (*gala*), genit. γαλάκτος (*galaktos*) = milk; Eng. suff. *-in*; *-ine* (*Chem.*).]

Chem.: A nitrogenous substance obtained from milk by first precipitating the casein with acetic acid; coagulating the albumen by boiling, removing the fat by ether, concentration, filtration from earthy phosphates, allowing the milk-sugar to crystallize out, and finally precipitating the galactin by alcohol. Thirty-five parts of dried milk yield one part of galactin, which is soluble in water, insoluble in alcohol and ether. It is precipitated by tannin, but differs from gelatine in redissolving at 60°. Galactin emulsifies fat. It is found in the blood, gastric juice, animal membranes, milk, eggs, and many morbid animal fluids. It also exists in the juices of edible plants, and in the fluid of the embryonal cotyledons. (*Watts: Dict. Chem.*)

gạ-lăc'-tīte, *s.* [Ger. *galactit*; Gr. γαλακτίτης λίθος (*galaktitēs lithos*) = a stone which when wetted and rubbed gives out a milky juice; γάλα (*gala*), genit. γάλακτος (*galaktos*) = milk.]

Min.: A variety of Natrolite (q.v.). It occurs in colourless crystals, of circular form, in the south of Scotland.

"Red, white, grey marble, jasper, *galactite*." *Sylvester: The Magnificence*, 51.

* **gạ-lăc-tŏ-dĕn'-drŏn,** *s.* [Gr. γάλα (*gala*), genit. γάλακτος (*galaktos*) = milk, and δένδρον (*dendron*) = a tree.]

Bot.: An old genus of Artocarpaceæ, formed to include the cow-tree of South America. The genus is now made a synonym of Brosimum, and the cow-tree is named *B. Galactodendron.*

gạ-lăc'-tŏ-gŏgues, gạ-lăc'-tạ-gŏgues, *s. pl.* [Gr. γάλα (*gala*), genit. γάλακτος (*galaktos*) = milk, and ἄγω (*agō*) = to induce.]

Med.: Medicines which promote the secretion of milk.

găl-ăc-tŏm'-ĕ-tĕr, *s.* [Gr. γάλα (*gala*), genit. γάλακτος (*galaktos*) = milk, and μέτρον (*metron*) = a measure.] An instrument for ascertaining the quality of milk by its specific gravity; a lactometer. It consists of a stem and bulb, the latter charged with shot serving as ballast, so that it floats upright in the milk, the relative specific gravity being indicated by the centesimally graduated stem.

găl-ăc-tŏph'-ạ-ġĭst, *s.* [Gr. γάλα (*gala*), genit. γάλακτος (*galaktos*) = milk, and φαγεῖν (*phagein*) = to eat.] One who subsists on milk.

găl-ăc-tŏph'-ạ-goŭs, *a.* [Gr. γάλα (*gala*),

genit. γάλακτος (*galaktos*) = milk, and φαγεῖν (*phagein*) = to eat.] Feeding or subsisting on milk.

ga-lăc-tō-phor-ī′-tĭs, *s.* [Gr. γάλακτοφόρος (*galaktophoros*) = giving milk: γάλα (*gala*) = milk, and φόρος (*phoros*) = bearing; suff. *-itis* = denoting inflammation; Fr. *galactophorite.*]

Med.: Inflammation of the lacteal ducts.

găl-ăc-tŏph′-ŏr-oŭs, *a.* [Gr. γάλα (*gala*), genit. γάλακτος (*galaktos*) = milk, and φέρω (*pherō*) = to bear, to produce.]

Ord. Lang. & Anat.: Producing milk; a name sometimes applied to the Lacteal ducts (q.v.).

ga-lăc-tō-poi-ĕt′-ĭc, *a. & s.* [Gr. γάλα (*gala*), genit. γάλακτος (*galaktos*) = milk, and ποιητικός (*poiētikos*) = making or tending to make; ποιέω (*poieō*) = to make.]

A. *As adj.:* Increasing or tending to increase the flow of milk.

B. *As subst.:* A substance which increases or tends to increase the flow of milk.

ga-lăc′-tōse, *s.* [Gr. γάλα (*gala*), genit. γάλακτος (*galaktos*) = milk, and Eng. suff. *-ose* (*Chem.*) (q.v.).]

Chem.: $C_6H_{12}O_6$, also called Arabinose. Obtained along with dextrose by boiling milk sugar [LACTOSE] with dilute sulphuric acid, neutralizing with chalk; filtering, from the filtrate the galactose crystallizes out first. It can be purified from dextrose by being less soluble in absolute alcohol. Galactose crystallizes in large rhombic prisms, which melt at 142°; they are very soluble in hot water, insoluble in absolute alcohol and in ether. It reduces four molecules of cupric sulphate. Nitric acid, sp. gr. 1·2, oxidizes it into mucic acid. It does not ferment with yeast. By the action of sodium amalgam it is converted into dulcite.

* **gal-age,** *s.* [Sp. *galocha* = a wooden shoe.] A clog; a wooden shoe. [GALOCHE.]

> "My heart-blood is well-nigh frorne, I feel;
> And my *galage* grown fast to my heel."
> *Spenser: Shepheards Calender; February.*

ga-lā′-gō, *s.* [Fr. *galago*, from the African name (?).]

Zool.: Galagos. A genus of Lemuridæ. The species have large orbits, so as to suit their nocturnal habits. They feed chiefly on fruits, devour vegetable gum, and inhabit the continent of Africa.

ga′-lăm, *s.* [An East Indian word (?).] See etym. and compound.

galam-butter, *s.*

Chem.: A solid fat resembling palm oil, obtained from *Bassia Parkii* and other species. It melts at 43°, and is soluble in ether. By saponification it yields stearic and palmitic acids; called also Shea-butter.

ga-lăn′-ga, ga-lăn′-gal, ga-lăn′-gāle, *s.* [Fr., Sp., & Ital. *galanga*; O. Fr. *galingal*; Arab. *chalan*, *khalandj*; Pers. *khulandj* = a tree from which wooden bowls are made.]

1. *Bot.:* Various species of *Alpinia*, specially *A. Galanga*, *A. racemosa*, *A. Allughas*, and *A. pyramidalis.*

2. The rhizomes of *Alpinia Galanga*, a native of China and Java. They are aromatic, and contain a volatile oil and a crystalline substance called Kaempferide. There are several other roots called by this name: they are used as an aromatic medicine in China.

* **găl-ant,** * **gal-aunt,** *a. & s.* [GALLANT.]

găl-ăn′-thŭs, *s.* [Gr. γάλα (*gala*) = milk, and ἄνθος (*anthos*) = blossom, flower.]

Bot.: Snowdrop. A genus of Amaryllids, tribe Amaryllеæ. The perianth is six-partite, campanulate, the three outer sepals spreading, the three inner smaller; erect, emarginate, no crown. Two species are known; both grow in Europe. *Galanthus nivalis* is the common Snowdrop, so often seen in British gardens, and which may, in the opinion of Sir Joseph Hooker, be really wild in Herefordshire and Denbighshire. It flowers from January to March. [SNOWDROP.]

ga-lăn′-tў, *a.* [A corrupt. of *gallant* (q.v.).]

galanty-show, *s.* A miniature shadow pantomime. Sometimes, but not usually, the figures are thrown upon a screen by means of a magic lantern.

> "That reminiscence of the nursery, the *galanty-show.*"—*Cassell's Technical Educator*, pt. x., p. 244.

găl-a-pĕc′-tīte, *s.* [Ger. *galapectit*, from Gr. γάλα (*gala*) = milk; πηκτός (*pēktos*) = curdled, and suff. *-ite* (*Min.*) (q.v.).]

Min.: A variety of ordinary Halloysite, from Anglar. (*Dana.*)

Găl-a-tē′-a, *s.* [Lat.]

1. *Class. Myth.:* A sea-nymph, daughter of Nereus and Doris, and passionately fond of Acis, a shepherd of Sicily, whom the Cyclop Polyphemus, out of jealousy, killed with a fragment of broken rock.

2. *Astron.:* An asteroid, the seventy-fourth found. It was discovered by Tempel, August 29, 1862.

găl-a-thē′-a, *s.* [From Galatea, the daughter of Nereus and Doris.]

Zool.: A genus of Crustaceans, the typical one of the family Galatheidæ (q.v.). *Galathea strigosa* is found in the Mediterranean, in Cornwall, &c.

găl-a-thē′-ĭ-dæ, *s. pl.* [Mod. Lat. *galathea*, and Lat. fem. pl. adj. suff. *-idæ*.]

Zool.: A family of decapod Crustaceans, sub-order Anomoura, which they connect with the Macrura.

Ga-lā′-ti-an (ti as shĭ), *a. & s.* [Gr.]

1. *As adj.:* Of or pertaining to Galatia, a country of Asia Minor, lying south of Paphlagonia, west of Pontus, and north-east of Phrygia. It was originally a part of Phrygia, but the Gauls or Celts having invaded Asia in several bodies, conquered and settled in this country about B.C. 241, whence the name.

2. *As subst.:* A native or inhabitant of Galatia.

¶ *St. Paul's Epistle to the Galatians:*

Scripture Canon: A New Testament Epistle, stated in ch. i. v. 1 to have been written by the Apostle Paul, a claim admitted by the ancient church universally, and by nearly all the ablest modern critics. It is one of the four epistles considered by Ferdinand Baur as genuine. St. Paul, who generally, it appears, used an amanuensis, wrote this epistle with his own hand (vi. 11). It was penned just after a visit by the apostle to the Galatian church (i. 6). Two such visits had taken place; the first, during which he founded the Galatian church, was about A.D. 51 or 50 (Acts xvi. 2); the second was about A.D. 55 (Acts xviii. 23). In ch. iv. 16 a first visit is alluded to, implying that there had been a second. The epistle, then, was not penned till at least A.D. 55, and probably not until A.D. 57 or 58, during the first part of the Apostle's residence at Ephesus (xix. 10). The subscription at the end of the epistle which shews that it was written from Rome, though accepted by Baur, is rejected by most critics. The Galatian church consisted mainly of Gentile converts. On these Paul did not impose the yoke of the Mosaic ritual, though he was willing to tolerate its use among the Jewish proselytes. No sooner had he departed, however, than Judaising teachers appeared in the Galatian church, represented that Paul was not on a level with the Apostles originally chosen, but a mere subordinate agent whom they had sent forth; that his teaching with regard to the law of Moses was in conflict with that of Peter, and that circumcision was indispensably necessary to salvation. In reply to these teachers, Paul showed that he was a real Apostle (i. 15, &c.), and that he met the other apostles on such a footing of equality, that on one occasion he had withstood Peter to the face when he was to be blamed (ii. 11–14, &c.). He reproaches them for their fickleness in so quickly turning from the pure to the perverted gospel (i. 6–9; iii. 1, &c.), exhorts them not to relapse from Christian liberty into the bondage of Judaism (iii., iv., v.), and concludes with practical exhortations (vi.).

găl′-ăx, *s.* [Gr. γαλαξαῖος (*galaxaios*) = milky, milk-white; γάλα (*gala*) = milk; in allusion to the milk-white spikes of flowers.]

Bot.: A genus of Diapensiaceæ or of Pyrolaceæ. *Galax aphylli*, a small plant growing wild in the southern part of the United States, is sometimes seen in gardens here.

ga-lăx′-ĭ-ăs, *s.* [Gr. γαλαξαῖος (*galaxaios*) milky.]

Ichthy.: The typical genus of the fam[ily] Galaxiidæ (q.v.).

ga-lăx′-ĭ-dæ, ga-lăx′-ĭ-ĭ-dæ, *s. pl.* [M[od.] Lat. *galaxias*, and Lat. fem. pl. adj. s[uff.] *-idæ*.]

Ichthy.: A family of Teleostean fish[es], sub-order Physostomata. It was founded [by] Prof. Müller. They are akin to the Salmoni[dæ], but are destitute of an adipose fin and sca[les].

găl′-ax-ў, * **ga-lăx′-ĭ-ăs,** * **gal-ax-ie** [Fr. *galaxie*, from Lat. *galaxias*, from [Gr.] γαλαξίας (*galaxias*) = the milky-way, γ[άλα] (*gala*), gen. γάλακτος (*galaktos*) = milk.]

I. *Ordinary Language:*

1. *Lit.:* In the same sense as II.

> "The *galaxy*, that milky way
> Which nightly, as a circling zone, thou seest
> Powdered with stars." *Milton: P. L.*, vii.

2. *Fig.:* An assemblage of splendid pers[ons] or things.

> "The crowded, yet clean and luminous gala[xy of] imagery, diffused through the works of Bishop Tay[lor]." —*Dr. Parr.* (*Latham.*)

II. *Astron.:* The Milky Way. It co[nsti]tutes nearly a great circle inclined to the e[qui]noctial at an angle of about 63°, and cut[s] that circle in right ascension 0h. 47′ and [12h.] 47′, so that the northern and southern [poles] are situated, the one on right ascension [12h.] 47′, declination N. 27°, and right ascen[sion] 0h. 47′, declination S. 27°. The milky [ap]pearance of the great belt or zone now [de]scribed arises from the blended ligh[t of] countless multitudes of stars, each doub[tless] a sun to some system of planets. Sir [W.] Herschel estimated that at one portion of [the] Milky Way 116,000 stars passed through [the] field of the telescope in a quarter of an h[our,] and on another occasion 258,000 stars in f[orty-] one minutes. Here and there the Milky [Way] divides, especially at one spot, where the[re is] a separation into two portions, somewha[t re]sembling the projecting sides of a fishtail. [Sir] W. Herschel believes that stars are not [scat]tered at tolerably uniform intervals thr[ough] space, but are congregated at particular s[pots.] The solar system is in a stratum of stars, [the] thickness of which is inconsiderable comp[ared] with its length and breadth. The su[n is] situated near the middle of the stratum [in] proximity to the front, where it subdiv[ides] into two streams. Looking laterally to [the] right or left one sees out of the mar[shalled] regiment of stars into comparatively va[cant] space, but looking forward or backward [the] front or rear can be seen blended togethe[r so] as to constitute the appearance called [the] Milky Way. Among the other popular na[mes] given to the Galaxy are Jacob's Ladder, [the] Way to St. James's, Watling Street, &c.

găl′-ba, *s.* [A corruption of *calaba*, the W[est] Indian name of the tree.] A durable wood [pro]duced by *Calophyllum Calaba.* [CALOPHYLLUM.]

găl′-ba-nŭm, *s.* [Lat. *galbanum*; Gr. χαλ[βάνη] (*galbanē*); Heb. חֶלְבְּנָה (*chhelbenah*), from [חָלַב] or חֵלֶב (*chheleb*) = fatness.]

1. *Phar.:* A gum resin obtained from [an] umbelliferous plant, *Ferula galbaniflua*. [It] is imported from Persia and India. It oc[curs] in translucent masses of brownish ye[llow] agglutinated tears, which have a pec[uliar] smell, and a bitter acrid taste. It yields w[hen] distilled with water about seven per cen[t. of] a volatile oil, having the formula $C_{10}H_{16}$ boiling at 160°; the residue, after boiling w[ith] milk of lime, and then precipitating the fil[trate] with hydrochloric acid, yields yellow re[sin] soluble in alcohol and ether. When the a[lco]holic solution of this resin is saturated w[ith] hydrochloric acid gas it yields umbellife[rone.] The purified resin yields by destructive [dis]tillation a blue oil, which boils at 289°, [and] has the formula $C_{20}H_{30}O$. It is said to [be] identical with the blue oil obtained f[rom] chamomile. Galbanum fused with ca[ustic] potash yields resorcin $C_6H_4(OH)_2$ (1-3). G[al]banum is used to prepare *Emplastrum Galb[ani]* and is given internally as a stimulating [ex]pectorant.

2. *Scrip.:* The translation, *galbanum*, [in] Exod. xxx. 34, is probably correct. It w[as] one ingredient in the holy anointing oil.

găl′-bu-la, *s.* [Lat. = a yellow bird, supp[osed] to be the female of the Golden Oriole.]

Ornith.: Jacamar. The typical genus

the family Galbulinæ (q.v.). Example: *Galbula paradisea*, the Swallow-tailed Kingfisher of Surinam.

găl-bu-lī′-næ, *s. pl.* [Lat. *galbul(a)*, and fem. pl. adj. suff. *-inæ.*]

Ornith.: Jacamars, a sub-family of Halcyonidæ (Kingfishers), which to a certain extent it connects with Meropidæ or Bee-eaters. They have a long, straight, greatly-compressed bill; the wings of moderate length, the fourth quill longest; the central feathers of the tail very long. They have generally metallic plumage, green being the most frequent colour. They are found in South America and the West Indies, building in holes in trees. They sit on low naked branches on the forest paths, whence they dart upon butterflies.

găl′-bu-lŭs, *s.* [Lat. = the nut of the cypress-tree.]

Bot.: A collective fruit, allied to the Strobilus (Cone-proper), but differing only in being round, and having the heads of the carpels much enlarged. Example, the Juniper.

***gal-der,** ***gal-dere,** *s.* [A.S. *galdor, gealdor;* Icel. *galdr.*] A charm, an enchantment.

"Heo bigolen that child mid *galdere* swithe stronge."
Layamon, ii. 384.

gāle (1), *s.* [Dan. *gal* = mad, furious; cf. Icel. *gola* = a breeze; *galdrahridh* = a storm raised by spells; Ir. & Gael. *gal* = vapour, smoke.]

I. *Literally:*

1. A wind; specifically, one stronger than a breeze, but less violent than a tempest; it is usually used in conjunction with some qualifying adjective: as a gentle *gale*, a strong *gale*, a fresh *gale*, &c.

"Both shores were lost to sight, when at the close
Of day a stiffer *gale* at East arose."
Dryden: Ovid; Metamorphoses x.

2. A breeze, a current of air.

"While every *gale* is peace, and every grove
Is melody." *Thomson: Spring*, 872.

II. *Fig.:* A quarrel, a disturbance, a breeze, a tumult; noisy excitement.

"Then the music touched the gates and died,
Rose again from where it seemed to fail
Stormed in orbs of song, a growing *gale*."
Tennyson: Vision of Sin, 25.

¶ For the difference between *gale* and *breeze*, see BREEZE.

gāle (2), *s.* [A.S. *gafol* = rent, tribute.] A periodic payment of rent or custom; an instalment of money. [GAVEL.]

"He has offered 20 per cent. reduction on all rent due, which would amount to £40, and 60 per cent. on a single *gale*."—*Daily News*, Oct. 5, 1881.

¶ *Hanging gale:* (See extract).

"Mr. Litton said it would be better to abandon the use of the term *hanging-gale*, as there was no such term in the Act. A *hanging-gale* meant a gale still left unpaid at each payment of rent."—*Standard*, Nov. 30, 1882.

gale-day, *s.* The day on which an instalment of rent is due.

"The rents were not demanded till the expiration of twelve months after the *gale-day*."—*Standard*, Nov. 30, 1882.

gāle (3), ***gagel,** ***gall,** ***gaul,** ***gayle,** ***gaylle,** *s.* [A.S. *gagol;* Dut. *gagel.*]

Bot.: *Myrica Gale;* its full English name is Sweet Gale. It is called also Bog Myrtle. It is a twiggy shrub, two or three feet high, occurring in bogs and moors on the Highland mountains and elsewhere, ascending to the height of 1,800 feet. It is found also on the Continent, in Northern Asia, and in North America. The flowers are in catkins; the leaves are covered with a waxy pubescence. It yields wax, resin, benzoic acid, and tannin. [MYRICA, MYRICACEÆ.]

"*Gale; mirtus; mircetum est locus ubi crescunt.*"—*Cathol. Anglicum.*

***gāle** (4), *s.* [A.S. *gál.*]

1. A song.

"The nyghtyngale
In wode maketh miry *gale*." *Alisaunder*, 2,547.

2. A noise, chatter.

"Listenith now and letith *gale*." *Alisaunder*, 2,047.

***gāle** (5), *s.* [GAOL.]

gāle (1), *v.i.* [GALE (1), *s.*]

Naut.: To sail; to sail fast.

gāle (2), ***gail,** ***galyn,** *v.i.* [A.S. *galan;* Icel. & Sw. *gala;* Dan. *gale* = to cry, to sing.] To cry, to sing, to croak.

"Whan the Sompnour herd the Frere *gale*."
Chaucer: C. T., 6,414.

gāle (3), *v.t.* [GALE (2), *s.*]

Min.: To acquire the right of working, as a mine.

gā′-lĕ-a, *s.* [Lat. = a helmet, usually of leather, whereas the *cassis* was generally of metal.]

1. *Anat.:* The amnion.

2. *Bot.:* Helmet; the arched upper lip in some labiate flowers: example, *Lamium album.*

3. *Palæont.:* A fossil echinoderm, shaped like a helmet.

4. *Pathol.:* A headache extending all over the head.

5. *Surg.:* A bandage for the head.

găl′-ĕ-ăs, *s.* [GALLEAS.]

Naut.: A low-built French galley worked with sails and oars.

gā′-lĕ-āte, gā′-lĕ-āt-ĕd, *a.* [Lat. *galeatus*, from *galea* = a helmet.]

I. *Ord. Lang.:* Covered with a helmet or helmet-shaped covering.

"A *galeated* echinus copped."—*Woodward: On Fossils.*

II. *Technically:*

1. *Bot.:* Helmeted; having a Galea (q.v.).

2. *Ornith.:* Having a crest of feathers on the head like that of a helmet; crested.

găl-ĕ-çȳ′-nŭs, *s.* [Gr. γαλῆ (*galē*) = a weasel, and κυών (*kuōn*), genit. κυνός (*kunos*) = a dog.]

Palæont.: A genus of Viverridæ, from the Pliocene of Œningen. It seems intermediate between the civets and the dogs. (*Nicholson.*)

gă-lē′-ga, *s.* [Etym. somewhat doubtful; considered to be probably from Gr γάλα (*gala*) = milk, and ἄγω (*agō*) = to draw, to induce; these plants being said to increase the milk of the animals eating them.]

Bot.: Goat's Rue; the typical genus of the subtribe Galegeæ (q.v.). They have pinnate leaves, and long axillary racemes of lilac or white flowers. They are found in the Mediterranean region, and extend to Persia. *Galega officinalis* was formerly used in fevers and convulsions.

ga-lĕg′-ĕ-æ, *s. pl.* [Mod. Lat. *galeg(a)*, and Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: A subtribe of Loteæ (q.v.).

găl′-ĕ-ī-dæ, *s. pl.* [Lat. *gale(us)* (q.v.), and fem. pl. adj. suff. *-idæ.*]

Ichthy.: A family of Squalina (Sharks). They have small spiracles, two dorsal fins, both of them destitute of spines, and an anal fin. [GALEUS.]

găl-ĕ-mê′-ta, găl-ĭ-mê′-ta, *s.* [A native word.] (See the compound.)

galemeta-wood, *s.*

Bot.: The native name in Jamaica for *Bumelia salicifolia.*

ga-lē′-mȳs, *s.* [Gr. γαλῆ (*galē*) = a weasel, and μῦς (*mus*) = a mouse.]

Zool.: A genus of Soricidæ (Shrews), often called Mygale; a name, however, which is yet more commonly applied to a genus of spiders. Galemys, or *Mygale moschata*, Linnæus's *Castor moschatus*, is the Muscovy or Musk-rat, called by the French *Desman*. It is found in Russia. *Galemys* or *Mygale pyrenaica*, occurs at the foot of the Pyrenees. [MYGALE.]

ga-lē′-na, *s.* [Lat., from Gr. γαλήνη (*galēnē*) = stillness of the sea; so called from its supposed property of quieting the violence of disease; Fr. *galène.*]

* 1. *Ord. Lang.:* A supposed remedy or antidote for poison.

2. *Min.:* [GALENITE].

ga-lĕn′-ĭc (1), **ga-lĕn′-ĭc-al** (1), *a.* [Eng. *galen(a)*; *-ic*, *-ical.*] Pertaining to or containing galena.

gā-lĕn′-ĭc (2), **gā-lĕn′-ĭc-al** (2), *a.* [See def.] Pertaining to Galen, a celebrated physician, born at Pergamus, A.D. 131, and said to have died at Rome about A.D. 200, or his method of treating diseases; remedial.

***Gā′-lĕn-ĭşm,** *s.* [From *Galen*, the physician, and Eng. suff. *-ism.*] The doctrines, or method of treating diseases taught by Galen.

***Gā′-lĕn-ĭst,** *s.* [From *Galen*, and Eng. suff. *-ist.*] A follower or disciple of Galen; a Galenite. (*Massinger: Parl. of Love.*)

Găl′-ĕn-ĭsts, *s. pl.* [Named from their founder, Galen or Galenus Abrahans de Haan. (Def.).]

Ecclesiol. & Ch. Hist.: An Anabaptist sect, one of two into which the Waterlanders split in 1664. Galen, their founder [Etym.], was a doctor of medicine and a minister among the Mennonites at Amsterdam. He is said to have taught that the Christian religion was not so much a body of truths to be believed as of principles to be obeyed. His enemies accused him of having Socinian proclivities, a charge from which the States-General acquitted him on September 14, 1663.

† **gā′-lĕn-īte** (1), **ga-lē′-na,** *s.* [Lat. *galen(a)* = (1) lead ore; (2) the dross of melted lead; *-ite* (*Min.*).]

Min.: An isometric, metallic ore with cubic cleavage. It occurs also tabular, or, rarely, fibrous. Hardness, 2·5 to 2·75; sp. gr. 7·25 to 7·70; lustre, metallic; colour and streak, lead-grey. Compos.: Sulphur, 13·4; lead, 86·6 = 100. It sometimes contains a small amount of silver, zinc, antimony, &c. Varieties: (1) Ordinary galena. (2) Argentiferous galena. (3) Galena, with impurities of arsenic, antimony, &c. Under this head are ranked Bleishweif, Targionite, and Steinmannite. (4) Galena containing an excess of sulphur. It includes supersulphuretted lead. (5) Targionite (q.v.). Occurs in Metamorphic and Silurian rocks, in the Mountain Limestone, &c., at Leadhills Scotland, in Cornwall, Derbyshire, Cumberland, &c., and in many places abroad. (*Dana.*)

* **Gā′-lĕn-īte** (2) [From *Galen*, and Eng. suff. *-ite.*] A physician.

"Not much unlike a skilful *Galenite*."
Sylvester: Du Bartas; The Trophies.

ga-lē-nŏ-çĕr-a-tīte, *s.* [Lat. *galena;* Gr. κέρας (*keras*), genit. κέρατος (*keratos*) = the head, and Eng. suff. *-ite* (*Min.*).]

Min.: The same as PHOSGENITE (*Dana.*); called in the *British Museum Catalogue* Cromfordite (q.v.).

găl-ĕ-ŏb′-dŏ-lŏn, *s.* [Gr. γαλεόβδολον (*galeobdolon*) = a blind nettle; γαλέη (*galeē*) = a weasel, and βδόλος (*bdolos*) = a fetid scent.]

Bot.: Weaselsnout. A sub-genus of Lamium (q.v.). The old *Galeobdolon luteum*, the Yellow Weaselsnout or Yellow Archangel, is now *Lamium Galeobdolon.* It is found in hedges and copses, chiefly on chalk and limestone, from Yorkshire south. Abroad it extends through Northern Europe to Western Siberia.

găl-ĕ-ŏ-çĕr′-dō, *s.* [Gr. γάλεος (*galeos*) = a shark, and κέρδω (*kerdō*) = a fox.]

Palæont.: A genus of Sharks founded upon teeth obtained from the cretaceous rocks, and from the Eocene of the Isle of Sheppey.

găl-ĕ-ō′-dēş, *s.* [Gr. γάλη (*galē*) = a weasel, and εἶδος (*eidos*) = form, appearance.]

Zool.: The typical genus of the family Galeodidæ (q.v.). *Galeodes aranoides* is found in the sandy deserts of the Eastern Hemisphere, and is said to annoy camels, and inflict an envenomed wound on man.

găl-ĕ-ŏd′-ĭ-dæ, *s. pl.* [Mod. Lat. *galeod(es)*, and Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: A family of Arachnida (Spiders), order Adelarthrosomata. It is sometimes called also Solpugidæ. The falces or mandibles are very large and chelate; the maxillary palpi are in the form of long feet; there are two eyes on the front of the head; the cephalothorax and abdomen are distinctly separate from each other and both segmented, and the respiration is by tracheæ. The animals are nocturnal and predatory; they inhabit the warmer regions.

găl-ĕ-ŏ-pĭ-thĕç′-ĭ-dæ, *s. pl.* [Mod. Lat. *galeopithec(us)* (q.v.), and Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: Flying Lemurs. A family of Mammalia, order Insectivora, which, however, it connects with the Quadrumana. It contains only the genus Galeopithecus (q.v.).

găl-ĕ-ŏ-pĭth′-ĕ-cŭs, *s.* [Gr. γαλέη (*galeē*) = a weasel, and πίθηκος (*pithēkos*) = an ape, a monkey.]

Zool.: Flying Lemur; the typical and only

genus of the family Galeopithecidæ (q.v.). They have a membrane extending from the nape of the neck to the forelegs, and thence to the hind ones and the tail. This enables them to take long leaps from tree to tree. It is, however, only a parachute to support them in the air, not a wing to enable them to fly like bats. They occur in the Indian Archipelago. The best-known species is *Galeopithecus volans*, found in Malacca, Sumatra, and Borneo.

găl-ĕ-ŏp′-sĭs, *s.* [Lat. *galeopsis*; Gr. γαλεόψις (*galeopsis*), from γαλέη (*galeē*) = a weasel, and ὄψις (*opsis*) = appearance. The comparison is between the corolla of the plant and a weasel's head.]

Bot.: Hemp-nettle. A genus of Labiatæ (Lamiaceæ), family Lamidæ. The calyx is campanulate, the anther cells opposite, bursting transversely by two valves. British species: (1) *Galeopsis Ladanum*, the Red; (2) *G. dubia*, the Downy; and (3) *G. Tetrahit*, the Common Hemp-nettle. *G. versicolor*, the Large-flowered Hemp-nettle, is reduced by Sir Joseph Hooker to a sub-species of No. 3. No. 2 is employed by country people in Britain as a pectoral medicine.

găl-ĕr-ĭc′-u-lāte, *a.* [Lat. *galericulum*, dimin. of *galerus* = a hat or cap.]

Botany, &c.:

1. Covered as with a hat or cap.

2. Having a tuft or plume. (*Paxton.*)

† **găl′-ĕr-īte,** *s.* [Lat. *galer(us)* = a hat or cap; *-ite* (*Min.*).] [GALERITES.]

Palæont.: An echinid of the genus Galerites (q.v.).

găl-ĕr-ī′-tēṣ, *s.* [GALERITE.]

Palæont.: The typical genus of the family Galeritidæ (q.v.). They are found chiefly in the chalk.

găl-ĕr-ĭt′-ĭ-dæ, *s. pl.* [Mod. Lat. *galerit(es)* (q.v.), and Lat. fem. pl. adj. suff. *-idæ.*]

Palæont.: A family of Echinoderms, order Echinoidea. [GALERITES.]

* **gal-ern,** *s.* [Etym. doubtful.] A north wind. (*Evelyn: Complete Gardener.*)

găl-ĕr-û′-ca, *s.* [Lat. *galerum* = a helmet-like covering for the head; a cap, a bonnet.]

Entom.: The typical genus of the family Galerucidæ. Six species are British.

găl-ĕ-rû′-çĭ-dæ, *s. pl.* [Mod. Lat. *galeruc(a)*, and Lat. fem. pl. suff. *-idæ.*]

Entom.: A family of tetramerous beetles, subtribe Cyclica. They are by some comprehended in the Chrysomelidæ. The length of the antennæ is half that of the body or less. They are of the same thickness throughout, or thicker towards the end, and the insects themselves are ovoid, oval, or nearly hemispherical.

ga-lĕs′-tēṣ, *s.* [Gr. γαλέη (*galeē*) = a weasel, and λῃστής (*lēstēs*) = a robber.]

Palæont.: A genus of mammalia, founded on remains from the Purbeck Beds, which are of upper oolitic age. It seems to have been an insectivorous and marsupial mammal.

găl′-ĕts, *s. pl.* [Fr. *galet* = a pebble, a shingle.] The splinters of stone broken off by the stroke of the mason's chisel. Also called spauls.

găl′-ĕ-ŭs, *s.* [Mod. Lat., from Class. Lat. *galeos*; Gr. γαλεός = a kind of shark or dog-fish.]

Ichthy.: The typical genus of the family Galeidæ. Two species occur in Britain. One is *Galeus vulgaris*, which is six feet long, and destructive to the fisheries. It is called the Common Tope, the Penny Dog, and the Miller's Dog. The other, *Mustelus lævis*, is smaller, has flat teeth, feeds chiefly on crustaceæ, and is called in Cornwall the Ray-mouthed Dog.

gā′le-wŏrtṣ, *s. pl.* [Eng. *gale*, and *worts.*]

Bot.: The name given by Lindley to the Myricaceæ, of which *Myrica Gale* is the type. [GALE, MYRICA.]

găl′-ĭ-a, *s.* [GALL.]

Med.: A medical preparation containing gall.

găl-ĭ-ā′-çĕ-æ, găl′-ĭ-ĕ-æ, *s. pl.* [Mod. Lat. *gali(um)* (q.v.), and Lat. fem. pl. adj. suff. *-aceæ*; *-eæ.*]

Bot.: Stellates, an order of Epigynous Exogens, alliance Cinchonales. The name Stellates, formed from Stellatæ, given by Ray in A.D. 1690, refers to the star-like appearance of the flowers. The order consists of herbaceous plants, with angular stems, whorled exstipulate leaves, and minute flowers. Calyx superior obsolete or four, five, or six-lobed. Corolla monopetalous, valvate, rotate, or tubular, its divisions the same in number as those of the calyx, as are the stamens. Fruit a didymous indehiscent pericarp, with two cells and two seeds. Seven or eight genera and from 300 to 320 species are known; all from cold and temperate regions, or, if from hot countries, then from hills. British genera, Galium, Rubia, Asperula, and Sherardia (q.v.). Sometimes the Galiaceæ are reduced to a sub-order of Rubiaceæ, the latter category being made to include also the Cinchonads.

* **gā′-lĭc,** *a.* [GAELIC.]

Ga-lĭç′-ĭ-an, *a.* & *s.* [See def.]

A. *As adj.:* Of or pertaining to Galicia, a province in the north-west of Spain.

B. *As subst.:* A native or inhabitant of Galicia.

Găl-ĭ-lē′-an, Găl-ĭ-læ′-an (1), *a.* & *s.* [From Galilee; Eng adj. suff. *-an.*]

A. *As adj.:* Of or pertaining to Galilee (q.v.).

B. *As substantive:*

I. *Geog.:* A native or inhabitant of Galilee.

II. *History:*

1. The followers of Judas the Gaulonite, who resisted the payment of the tax imposed by Quirinius, the Cyrenius of St. Luke (Luke ii. 1), and gave the Romans trouble till the capture of Jerusalem by Titus in A.D. 70.

2. (*Pl.*) A name applied to Jesus and His disciples, from the intimate connection they had with Galilee (Matt. xxvi. 69; Mark xiv. 70); hence applied by Pagans and Mohammedans, as a term of reproach, to Christians generally.

> "And wounds by *Galileans* given,
> The surest pass to Turkish heaven."
> *Byron: The Giaour.*

Găl-ĭ-lē′-an (2), *a.* [After *Galile(o)*; Eng. suff. *-an.*] Pertaining to or invented by Galileo, the celebrated astronomer.

Galilean-telescope, *s.*

Optic instru.: A telescope of the simplest construction, like an opera glass. It has only two lenses, one an object-glass, the other a diverging or concave eye-piece.

Găl′-ĭ-leē, *s.* [Gr. Γαλιλαία (*Galilaia*); Heb. גְּלִילָה (*Gelilah*), from גָּלִיל (*galil*) = (as subst.) a circle, a region, (as adj.) rolling, turning. See def. 1.]

1. *Geog.:* A Roman province, comprehending all the north of Palestine west of the Jordan. As the term Asia began with a small patch of territory in Asia Minor, but gradually had its meaning extended till it took in all the Asiatic continent, so the word Galilee was first applied to a fragment of the tribe of Naphtali, constituting its northern portion (Joshua xx. 7; 2 Kings xv. 29). It was mostly inhabited by Gentiles (Isaiah ix. 1; 1 Maccab. v. 20–23). In the New Testament times the word had the more extended meaning, and we learn from Josephus that there were an Upper and a Lower Galilee.

2. *Arch.:* A porch or chapel at the entrance of a church. The galilee at Lincoln Cathedral is a porch on the west side of the south transept; at Ely Cathedral it is a porch at the west end of the nave; at Durham it is a large chapel at the west end of the nave, which was built for the use of the women, who were not allowed to advance farther into the church than the second pillar of the nave. In the galilee were also deposited corpses previous to interment, and religious processions were formed. The name is derived from the expression in the Bible, "Galilee of the Gentiles." At Durham the bishop's consistory-court was also held in the galilee.

găl-ĭ-mā′-ti-a (ti as shĭ), *s.* [Fr., prob. a form of *galimafrée* = Galimaufray (q.v.), but traditionally said to be derived from the confusion of an advocate who, pleading the case of a man named Matthew, from whom a cock had been stolen, used the words *Galli Mathias* = the cock's Matthew, instead of *Gallus Mathiæ* = Matthew's cock.] Nonsense, confused or nonsensical language; an absurd mixture of words.

găl-ĭ-mê′-ta, *s.* [GALEMETA.]

găl′-ĭṅ-gāle, *s.* [O. Fr. *garingal*; Fr. *galanga*; Ger. *galgant.*]

Bot.: *Cyperus longus*, a perennial, tall sedge with an umbellate cyme, and erect, red-brown glumes. It is found in the south of England, Wales, and the Channel Islands, but is very rare. (*Sir Joseph Hooker.*)

> "The rote is gingeuir and *galingale*."
> *Land of Cockayne, 7.*

găl-ĭn-sō′-ga, *s.* [Named after Don M. M. de Galinsoga, a Spanish botanist.]

Bot.: A genus of Compositæ. Only one or two species are known. *Galinsoga parviflora* has been introduced into Britain from Peru and has rooted itself in cultivated fields, and on roadsides at Kew and elsewhere. (*Sir Joseph Hooker.*)

găl-ĭn-sō′-gĕ-æ, *s. pl.* [Mod. Lat. *galinsog(a)*, and Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: A sub-tribe of Senecionideæ, type Galinsoga.

gal-i-on-gee, *s.* [A Turkish word.] A sailor.

> "All that a careless eye could see
> In him was some young *galiongee*."
> *Byron: Bride of Abydos, ii. 2.*

găl′-ĭ-ôt, găl′-lĕ-ôt, găl′-lĭ-ôt, *s.* [Fr. *galiote*, from Low Lat. *galeota*, dimin. of *galea* = a galley; Sp. *galeota*; Ital. *galeotta.*]

Naut.: Formerly, a galley propelled by sails and oars, having one mast and sixteen to twenty seats for rowers; used by most of the

GALIOT.

maritime nations of continental Europe, and called by substantially the same name in the Romance languages. Now a strong and cumbrous, bluff-bowed, two-masted vessel, used in the Dutch merchant service.

> "Finding the same deep enough to harbour there gallies and *galliots* in good number, proceeding further he found a very open place."—*Hackluyt: Voyages, iii. 313.*

găl-ĭ-pē′-a, *s.* [The name given to the plant in Guiana; Fr. *galipée, galipier.*]

Bot.: A genus of Rutaceæ, tribe Cusparieæ. *Galipea officinalis* or *G. Cusparia*, the latter called also *Bonplandia trifoliata*, furnishes Angostura bark (q.v.).

găl′-ĭ-pŏt, *s.* [Fr.]

Comm.: The French name for the white viscid resin which exudes from the stem of *Pinus maritima*, after an incision has been made. The name is probably derived from the vessels in which it was collected or preserved. [GALLIPOT.]

gā′-lĭ-ŭm, *s.* [Lat. *galium*; Gr. γάλιον (*galion*) = the Yellow Bedstraw (*Dioscorides*), from γάλα (*gala*) = milk, which some species of the genus are used to curdle.]

Bot.: A genus of plants, the typical one of the order Galiaceæ (q.v.). Corolla rotate, four-cleft; stamens four; fruit didymous, dry, often hispid or tubercled. About 150 species are known, eleven of them British: (1) *Galium verum* and (2) *G. Cruciata*, perennial, with yellow flowers; (3) *G. palustre*, (4) *G. uliginosum*, (5) *G. saxatile*, (6) *G. sylvestre*, and (7) *G. Mollugo*, perennial, with white flowers and very minute, glabrous, smooth granulate or rough fruit; (8) *G. boreale*, perennial, with white flowers and hispid fruit; (9) *G. Aparine*, (10) *G. tricorne*, and (11) *G. parisiense*, annual, with white or greenish flowers, large fruit, and the angles of the stem and the margin

of the leaves prickly. No. 5, the Smooth Heath Bedstraw, flowers from July to September on heathy spots and hilly pastures to such an extent as in some places to whiten the ground. No. 1 is the Yellow Bedstraw, which also is common. Its flowers are used to curdle milk. No. 9 is the Goose-grass or Cleavers, which is abundant in hedges; the hooked fruits cling to the coats of animals, and are thus widely dispersed. An extract of *G. rigidum*, a foreign species, has been used successfully in epilepsy, as has an extract of No. 7. The torrefied grains of various species of Galium are a good substitute for coffee.

gâll (1), * **galle**, *s.* [A.S. *gealla*; O. Northumb. *galla*; cogn. with Dut. *gal*; Icel. *gall*; Sw. *galla*; Dan. *galde*; Ger. *galle*; Lat. *fel*; Gr. χολή (*cholē*).]

I. *Ordinary Language:*

1. *Literally:*

(1) In the same sense as II.

"*Gall* is the greatest resolvent of curdled milk. Boerhaave has given at a time one drop of the *gall* of an eel with success."—*Arbuthnot: On Diet.*

(2) The gall-bladder.

Anat.: A duct which conveys the bile; a Bile-duct (q.v.).

gall-pipe, *s.* The same as GALL-DUCT (q.v.).

* **gall-wet**, *a.* Full of gall or bitterness.

"Or do the relic ashes of his grave
Revive and rise from their forsaken cave?
That so with *gall-wet* words and speeches rude,
Controul the manners of the multitude."
Bp. Hall: Satires, bk. ii. (Prol.)

gâll (2), *s.* [O. Fr. *galle*, from Lat. *galla* = a gall-nut; Dut. *galnort*; Fr. *gale, noix de gale*; Ital. *galla*; Ger. *gall-apfel*.]

I. *Ordinary Language:*

1. *Gen.* (*Bot.*): A morbid excrescence on the leaf or leaf bud of any plant, arising probably from the puncture of a cynips. These small hymenopterous insects deposit their eggs on the leaves, &c., of various plants, each species being limited to a single plant, or even a single part of one; thus there is a *Cynips ficus caricæ* on the common fig, a *Cynips fagi* on the beech, and a *Cynips quercus folii* on the leaves of the common oak. The so-called oak-apples are not fruits but morbid excrescences produced by *Cynips terminalis*, so called because it deposits its eggs at the extremity of the shoots on the tree. Some galls have at times been mistaken for fungi, but proper care can distinguish between the two.

2. *Spec.* (*Bot. & Comm.*): The galls of commerce are produced by the puncture by *Cynips gallæ tinctoriæ* of the leaf-bud of *Quercus infectoria*, or more rarely of some other species of oak. In the hole made by the insect, an egg is deposited, in due time to be developed into a larva, which eats its way out when it comes to the perfect state. One variety is white or yellow, another green, grey, or black. The best galls come from Smyrna and Aleppo. With the salts of iron they yield a fine black colour, and are used in the manufacture of ink.

"The Aleppo *galls*, wherewith we make ink, are no other than cases of insects, which are bred in them."—*Derham.*

II. *Pharm.:* Galls are used in pharmacy for the preparation of Gallic acid (q.v.). Officinal preparations of gall-nuts are *Tinctura Gallæ* (tincture of galls), *Unguentum Gallæ* (ointment of galls), and *Unguentum Gallæ cum Opio* (ointment of galls with opium). Gall nuts are useful on account of the Tannin (q.v.) and gallic acid contained in them. Tannin is a powerful astringent, and is useful in affections of the alimentary canal, also applied locally to suppress hæmorrhage from the gums, lips, nose, &c. Preparations of gall-nuts should not be given with salts of iron, infusions and decoctions containing alkaloids, salts of lead, antimony, &c., nor with gelatine, as these substances give precipitates with tannic acid.

¶ *Gall of the Earth:*

Bot.: (1) A composite plant, *Mulgedium floridanum*; it is so called on account of its bitterness [MULGEDIUM]; (2) *Nabulus Fraseri.*

gall-insects, *s. pl.*

had thirty-two seats for rowers, who were generally slaves, six or seven at each oar. A tower-like structure was at the stern, and a castellated structure in the bows.

"And while they were proceeding on in this maner, one of their great *galliasses* was so furiously battered with shot, that the whole nauy was faine to come vp rounder together for the safeguard thereof."—*Hackluyt: Voyages*, vol. i., p. 597.

găl′-lĕ-ĭn, *s.* [*Gall* (2), and (*phthal*)*ein.*]

Chemistry: Galleïn. Pyrogallolphthaleïn.

$$C_{20}H_{10}O_7, \text{ or } O_2\!\left<\begin{matrix}C_6H_2(OH)\\ C_6H_2(OH)\end{matrix}\right>\!O\!>\!C\!\left<\begin{matrix}C_6H_4\\ O\end{matrix}\right>\!C{=}O.$$

Obtained by heating for some hours, one part of phthalic anhydride with two parts of pyrogallol from 190° to 200°, then dissolving the fused mass in alcohol, precipitating with water, and recrystallizing from dilute hot alcohol. It forms small crystals which are red-brown by reflected, and metallic green by transparent light. Galleïn is nearly insoluble in cold water, slightly soluble in ether, and very soluble in alcohol. It dissolves in caustic potash with a red colour, which is turned blue by excess of alkali. Soluble in ammonia with a violet colour. Galleïn is used as a dye.

* **găl′-lĕ-ŏn,** * **găl′-lĭ-ŏn,** *s.* [Sp. *galeon*, from Lat. *galea* = a galley (q.v.); Ital. *galeone.*]

* **găl′-lĭ-ard-ĭse,** *s.* [Fr.] Merriment, mirth, liveliness, exuberant gaiety.

"I am no way disposed for the mirth and *galliardise* of company."—*Browne: Religio Medici.*

* **găl′-lĭ-ard-nĕss,** *s.* [Eng. *galliard*; *-ness.*] The quality of being galliard; gaiety, merriment, liveliness.

"His sprightly pleasance and *galliardness* abate."—*Gayton: Festivous Notes on Don Quixote.*

găl′-lĭ-ăss, *s.* [GALLEASS.]

Găl′-lĭc (1), *a.* [Lat. *Gallicus*, from *Gallia* = Gaul, France.] Of or pertaining to Gaul or France; French; Gallican.

găl′-lĭc (2), *a.* [Eng. *gall* (2), s.; *-ic.*] Of, or pertaining to, or derived from galls.

gallic acid, *s.*

Chem.: $C_7H_6O_5 + H_2O$ or $C_6H_2(OH)_3{\cdot}CO{\cdot}OH + H_2O$. Trioxybenzoic acid. Gallic acid occurs in several plants, as Sumach, Divi-divi; in the leaves of *Arctostaphylus uva ursi*; in the roots of *Helleborus niger*, *Veratrum album*, *Colchicum autumnale*, *Cephælis ipecacuanha*; in the bark of *Strychnos nux vomica*; in red wine, &c. Gallic acid can be prepared synthetically by fusing di-iodoxybenzoic acid with caustic potash. It is also formed by powdering gallnuts, which contain tannin, and exposing them moistened to the air for a month, at a temperature of 70°, and is then extracted with boiling water, the crystals re-dissolved in boiling water, and decolorised by animal charcoal. The spores of *Pencillium glaucum* convert tannin into gallic acid. It is also prepared by boiling tannin with dilute sulphuric acid, which converts the tannin into gallic acid and glucose, $C_{27}H_{22}O_{17} + 4H_2O = 3C_7H_6O_5 + C_6H_{12}O_6$. Gallic acid crystallizes in white, silky needles, which lose their water of crystallization at 120°, and melt with decomposition at 222° to 240°. Soluble in three parts of boiling water, and in 130 parts of water at 12°; also soluble in alcohol and in ether. Pure gallic acid does not precipitate gelatine, albumen, or alkaloids. It gives a bluish-black colour with ferric salts; soluble in excess of Fe_2Cl_6. Dry gallic acid heated to 210° gives off CO_2, and yields pyrogallol, $C_6H_3(OH)_3$. By the action of nitric acid it is oxidized to oxalic acid. Gallic acid forms salts which are called gallates. Dry gallic acid triturated in a mortar with potassium permanganate, takes fire, and gives out sparks. Gallic acid has a sour, astringent taste. It reduces gold and silver salts, and is used in photography. It is a monatomic acid, and also a triatomic phenol; therefore, four atoms of hydrogen can be replaced by metals. Gallic acid is sometimes used in medicine instead of tannin.

Găl′-lĭ-can, *a.* [Lat. *Gallicus* = Gallic, French.] Of or pertaining to Gaul or France; as, the Gallican Church.

Găl′-lĭ-can-ĭsm, *s.* [Eng. *Gallican*; *-ism.*] Principles in the French Church, opposed to Ultramontanism.

¶ As early as 1438 the Pragmatic Sanction (q.v.), to a certain extent protected the liberties of the Gallican Church against the encroachments of Rome. This was suspended in 1516 by the Concordat with Leo X., which was less favourable to the Gallican Church. On March 12, 1682, the French clergy issued a declaration that the Papal authority in France is limited to spiritual matters, and that it is subject to the decision of a General Council. This manifesto was condemned by successive Popes in 1682, 1690, 1706, and 1794.

Găl-lĭç′-ĭ-nīte, găl-lĭt′-zĕn-īte, *s.* [From Ger. *galitzenstein*, the name of the mineral, implying that it is from Galicia, where it is not known to occur.]

Min.: The same as GOSLARITE (q.v.).

Găl′-lĭ-çĭsm, *s.* [Eng. *Gallic* (1); suff. *-ism*; Fr. *Gallicisme.*] A mode of speech peculiar to the French language; a French expression or idiom.

"In English I would have *gallicisms* avoided."—*Felton: On the Classics.*

* **Găl′-lĭ-çīze,** * **Găl′-lĭ-çīse,** *v.t.* & *i.* [Eng. *Gallic* (1); *-ize.*]

A. *Trans.:* To adapt or make conformable to the French idiom or language; to Frenchify.

"Being very much *gallicised* in my character."—*Sydney Smith: Letters*, 1835.

B. *Intrans.:* To adopt a French style; to use Gallicisms.

găl-lĭc′-ō-la, găl-lĭc′-ō-læ, *s. pl.* [Lat. *galla* = a gall, an oak-apple, and *colo* = to inhabit.]

Entom.: Gall-flies, gall-insects. A tribe of Hymenopterous insects; sub-order Petiolata. The antennæ have from thirteen to fifteen joints, the wings only a few nervures, there is an ovipositor bent within the body in the form of the letter S. Its puncture leads to the production of galls. [GALL (2), GALL-INSECTS, CYNIPIDÆ, CYNIPS.]

* **găl-lĭ-găs′-kĭned,** *a.* [Eng. *galligaskin(s)*; *-ed.*] Wearing galligaskins.

* **găl-lĭ-găs′-kĭns,** * **gal-lo-gas-coins,** *s.* [A corrupt. of O. Fr. *garguesques* = *greguesque* = Greekish, from Ital. *Grechesco* = Greekish. (*Wedgwood.*) Cf. Prov. Eng. *gregs* = a kind of breeches or hose; Fr. *gregues.*]

1. Large open breeches; wide hose.

2. Leather gaiters worn by sportsmen.

"My *galligaskins*, that have long withstood
The winter's fury and encroaching frosts,
By time subdued—what will not time subdue?—
An horrid chasm disclose."
Philips: Splendid Shilling.

* **găl-lĭ-mā′-ti-a (ti as shĭ),** *s.* [GALIMATIAS.]

* **găl-lĭ-mâu-frȳ,** *s.* [Fr. *galimafrée* = a hash.]

1. A hash, a hotch-potch, or hodge-podge of scraps of meat.

"Delighting in hodge-podge, *gallimaufries*, forced meats, &c."—*King: Art of Cookery*, let. 9.

2. Any inconsistent or ridiculous medley.

"They have a dance, which the wenches say is a *gallimaufry* of gambols, because they are not in't."—*Shakesp.: Winter's Tale*, iv. 3.

gâl′-lĭn, *s.* [Eng. *gall* (2), s.; suff. *-in* (*Chem.*).]

Chem.: Gallin, $C_{20}H_{14}O_7$, or, $O[C_6H_2(OH)_2]_2{\cdot}CH{\cdot}C_6H_4{\cdot}CO{\cdot}OH$. Obtained by long boiling galleïn with zinc dust and ammonia, then acidifying with dilute H_2SO_4 and shaking out with ether. It crystallizes out of ether in fine needles, and quickly reddens in the air. It can be used as a dye instead of logwood.

găl-lĭ-nā′-çĕ-æ, găl-lĭ-nā′-çĕ-ī, *s. pl.* [Lat. *gallinaceus* = pertaining to poultry, from *gallina* = a hen.]

Ornith.: A sub-order of birds, order Rasores, of which it is the type. The bill is convex, the upper mandible arched over the lower one, the nostrils over-arched by a cartilaginous membrane, the wings are short, the legs strong, the hallux elevated above the anterior toes so as merely to touch the ground in walking. In the males the back of the tarsus is generally furnished with a spur, which may

be used as an offensive weapon. The birds are generally polygamous, the males more brilliantly coloured than the females. It is divided into about eight families. Tetraonidæ (Grouse), Perdicidæ (Partridges), Phasianidæ (Pheasants), Pteroclidæ (Sand-grouse), Turnicidæ (Bush-quails), Megapodidæ (Mound birds), Cracidæ (Curassows), Tinamidæ (Tinamous). The term Gallinacei is occasionally used in a more extensive sense, being applied to all the Rasores. [GALLINÆ.]

găl-lĭ-nā'-çē-ăn (or **cean** as **shăn**), *s.* [Lat. *gallinaceus*, from *gallina* = a hen; *gallus* = a cock.] One of the order Gallinacea.

găl-lĭ-nā'-çē-ŭs (or **ceous** as **shŭs**), *a.* [Lat. *gallinaceus.*] Of or pertaining to the Gallinaceæ.

"A circumstantial resemblance between the stomachs of *gallinaceous* fowls and the structure of corn-mills."—*Paley: Natural Theology*, ch. xv.

găl-lī'-næ, *s. pl.* [Lat. nom. pl. of *gallina* = a hen.]

Ornith.: An order of birds established by Linnæus. It has now become the sub-order Gallinacei (q.v.).

găl-lĭ-nā'-zō, *s.* [Sp.]

Ornith.: The Spanish-American name for the Turkey-buzzard. [CATHARTES.]

gâll'-ĭng, *pr. par., a., & s.* [GALL, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

1. *Lit.:* The act of making sore by rubbing off the skin.

2. *Fig.:* The act of vexing, irritating, or chafing.

gâll'-ĭng-lĭ, *adv.* [Eng. *galling*: *-ly.*] In a galling manner; so as to gall, vex, or irritate.

gâll'-ĭng-nĕss, *s.* [Eng. *galling*: *-ness.*] The quality or state of being galling.

"I never found that people discontented with their own church-government (the *gallingness* of whose yoke is the grand scare-crow that frights us here)."—*Boyle: Works*, ii. 39.

găl'-lĭ-nĭp-pĕr, *s.* [Etym. doubtful.]

Entom.: A large mosquito.

* **găl-lĭ-nĭv'-ō-rŏŭs,** *a.* [Lat. *gallina* = a hen, and *voro* = to devour.] Feeding or living upon fowls.

găl-lĭn-sĕē'-tą, *s. pl.* [Lat. *galla* = an oak-apple, a gall nut, and *insecta*, pl. of *insectum* = an insect.]

Entom.: A tribe of Homoptera, consisting of the family Coccidæ (q.v.). [GALL-INSECTS.]

găl'-lĭn-ŭ-lą, *s.* [Lat. *gallinula* = a pullet, a chicken, dimin. of *gallina* = a hen.]

Ornith.: Gallinule. The typical genus of the sub-family Gallinulinæ. Bill short, straight, the margins not inflexed, the cutting edges of the upper mandible folding over the lower one. Toes simple, without any marginal membrane. The only British species is *Gallinula Chloropus*, the Moor-hen (q.v.).

găl'-lĭ-nule, *s.* [GALLINULA.]

Ornith.: An English book-name for the genus Gallinula (q.v.).

găl-lĭn-ŭ-lī'-næ, *s. pl.* [Lat. *gallinul(a)*, and fem. pl. adj. suff. *-inæ* (q.v.).]

Ornith.: Water-hens. A sub-family of Rallidæ (Rails). They have the base of the ridge of the bill dilated into a soft oblong plate, occupying part of the forehead. They are aquatic birds, swimming and diving well, feeding on insects, worms, mollusca, besides seeds of grasses and other plants.

găl-lĭ-ō-nĕl'-lą, *s.* [GAILLONELLA.]

găl'-lĭ-ŏt, găl'-lĕ-ŏt, *s.* [GALIOT.]

Găl-lĭp'-ō-lĭ, *s.* [See def.] A town in Italy.

Gallipoli oil, *s.* An inferior kind of olive oil brought from Gallipoli.

găl'-lĭ-pŏt, *s.* [A corrupt. of O. Dut. *gley-pot*, from *gleye*; Dut. *gley* = potter's clay.]

1. A small glazed earthenware vessel, used for containing medicines, jams, preserves, &c. According to Stow they were introduced into England about A.D. 1570, by J. Andries and J. Jansen, potters, from Antwerp, who settled in Norwich, where they followed their trade.

"Plato said his master Socrates was like the apothecary's *gallipots*, that had on the outsides apes, owls, and satyrs, but within, precious drugs. —*Bacon: Apophthegms.*

* 2. A contemptuous name for an apothecary.

"It's Vidler the apothecary . . . you said you had *gallipots* enough."—*Thackeray: Newcomes*, ch. xiv.

găl-lĭt'-zĕn-īte, *s.* [GALLICINITE.]

găll'-ĭ-ŭm, *s.* [*Gallia*, in honour of France.]

Chem.: Gallium, a metallic element, symbol Ga, atomic weight 69·9. Gallium is a triad element. Specific heat 0·079. It was discovered by a French chemist, Lecoq de Boisbaudram, in zinc blende; but Mendeléjeff had shown in his periodic law, that an element must exist having intermediate properties between aluminium and indium; he called this supposed element ekaluminium. The metal is obtained by dissolving the blende in sulphuric acid and placing in the solution plates of zinc till the disengagement of hydrogen becomes slow, but is still perceptible, by which means the greater portion of the copper, lead, cadmium, iridium, thallium, silver, mercury, selenium, arsenic, &c., contained in the ore is precipitated; the clear filtered liquid is then heated with a large excess of zinc, the resulting gelatinous precipitate, consisting chiefly of alumina, basic salts of zinc, and gallium, is redissolved in hydrochloric acid, and again heated with zinc, which gives a precipitate, in which the gallium is more concentrated. This precipitate is redissolved in hydrochloric acid, the solution is treated with hydrogen sulphide, and the filtered liquid, after expulsion of the H_2S, is fractionally precipitated with ammonium carbonate, till the solution of the resulting precipitate in hydrochloric acid no longer gives any indication of the presence of gallium when examined by the spectroscope. The precipitates are collected and dissolved in sulphuric acid, and cautiously evaporated till the free sulphuric acid is expelled; the residue when cold is digested with water till it is dissolved, the nearly neutral solution is boiled, the basic gallium sulphate is precipitated and filtered while hot, and then dissolved in a small quantity of sulphuric acid, treated with excess of potash till the precipitate is redissolved, and then precipitated by a stream of CO_2. Finally the gallium oxide is redissolved in the smallest quantity of sulphuric acid, the solution mixed with excess of slightly acid ammonium acetate, then H_2S gas is passed through the liquid; the filtered acetic solution is diluted with water, and heated to boiling, whereby the greater part of the gallium is precipitated as oxide; this precipitate is filtered off hot, washed with boiling water, and redissolved in sulphuric acid, and the solution mixed with a slight excess of potash, and filtered, whereby a pure alkaline solution of gallium is obtained. Metallic gallium is obtained by the electrolysis of this alkaline solution, platinum electrodes being used, and the positive electrode being larger than the negative on which the metallic gallium is precipitated, which is detached by dipping the platinum plate in warm water and bending it backwards and forwards. Gallium is a silver-white metal, which melts at 30°, but remains liquid for weeks at 0°. Cooled to −15° it crystallizes. Gallium is a hard metal, very slightly malleable, and leaves a bluish-grey trace on paper; when melted it adheres to glass; it does not tarnish in the air. Its specific gravity is 5·95. It gives a brilliant violet line in the spectrum. When heated in the air it oxidizes on the surface, and does not volatilize. It dissolves in hydrochloric acid with disengagement of hydrogen. It is scarcely attacked by nitric acid in the cold; when heated it dissolves slowly with evolution of nitrous fumes. It forms salts.

gallium-chloride, *s.*

Chem.: $GaCl_3$, is colourless, crystalline, and deliquescent.

gallium-oxide, *s.*

Chem.: Gallium oxide is obtained by igniting the nitrate, which leaves a white friable mass.

gallium-salts, *s. pl.*

Chem.: Gallium-salts are precipitated by ammonia. If redissolved by hydrochloric acid, and again precipitated by ammonia, the precipitate is soluble in excess. Potash gives a precipitate which is soluble in excess, sodium carbonate gives a white precipitate, an ammoniacal solution of gallium chloride, or sulphate, is precipitated by acetic acid; hydrogen sulphide does not precipitate gallium from slightly acid solutions; sulphide ammonium does not give a precipitate with the ammoniacal solutions of pure chloride or sulphate of gallium; if zinc is present the gallium is precipitated along with the zinc. Potassium ferrocyanide gives a yellow precipitate with strongly acid solutions of gallium chloride. (*Watts: Dict. Chem.*)

gallium-sulphate, *s.*

Chem.: $Ga_2(SO_4)_3$, is very soluble in water; when mixed with ammonium sulphate and evaporated, it yields octohedral crystals of gallium ammonium alum.

găl-lĭ-vănt', * **gall-a-vant,** *v.i.* [Prob. a corruption of *gallant* (q.v.).]

1. To gad about with or after one of the opposite sex; to flirt.

"You were out all day yesterday, and gallivanting somewhere, I know."—*Dickens: Nicholas Nickleby*, ch. lxiv.

2. To run about after trivial matters; to fuss; to bustle.

găl'-lĭ-văt, *s.* [Perhaps from Dut. *galei* = a galley, and *vat* = a vessel.]

Naut.: A large swift sailing galley or small vessel used on the Malabar coast. They are seldom over seventy tons burden, are two-masted, and carry small swivel guns.

găl'-lĭ-wăsp, *s.* [First element (*galli*) doubtful; second, Eng. *wasp*; cf. *gallipavum.*]

Zool.: *Celestus occiduus*, a small lizard, family Scincidæ, found in the West Indies. It is an object of terror to the inhabitants, but is really harmless.

* **gal-loc,** *s.* [A.S.] The herb Comfrey.

* **gal-lo-glash,** * **gal-lo-glass,** * **gol-lo-glass,** *s.* [GALLOWGLASS.]

găl-lō-mā'-nĭ-ą, *s.* [Lat. *Gall(ia)* = Gaul; *o* connective, and Eng. *mania* (q.v.).] A mania for or excessive love of French fashions, customs, literature, &c.

găl'-lŏn, * **gal-on,** * **gal-one,** * **gal-oun,** * **gal-un,** *s.* [O. Fr. *gallon, jallon, jalon*, from Low Lat. *galona* = a gallon.]

* 1. A pitcher, of whatever capacity.

"A man beringe a *galoun* of water schal mete to you."—*Wycliffe: Mark* xiv. 13.

2. An English measure of capacity for liquid or dry goods, generally the former, containing four quarts or eight pints. The imperial gallon now in use as the standard measure of capacity contains 277·274 cubic inches, or 10 lbs. avoirdupois of distilled water at the temperature of 62° F., the barometer standing at 30 inches. The United States standard gallon contains 231 cubic inches; the old corn gallon 268·6 cubic inches, and the old ale gallon 282 cubic inches. An English imperial gallon contains 4·5434 litres.

"Fresh water comes out of the rocks; but so slowly, that it yields not above forty *gallons* in twenty-four hours."—*Dampier: Voyages* (1682).

* **găl-lōon',** * **gă-lōon',** *s.* [Fr. & Sp. *galon*; Ital. *gallone.*]

Fabric: A narrow cotton fabric for binding shoes, &c; a narrow binding stuff with threads of gold and silver; a silk, woollen, or mixed tape for edging, binding, or shoe-strings.

"Lace and ribbons, silver and gold *galloons*, with the like glittering gewgaws, are so many lures to women of weak minds or low education."—*Addison: Spectator*, No. 15.

* **găl-lōon',** * **gă-lōon',** *v.t.* [GALLOON, *s.*] To braid or bind with galloon.

"Those enormous habiliments . . . slashed and *galooned*."—*Carlyle: Sartor Resartus*, bk. i., ch. viii.

găl'-lŏp, * **galop,** *v.i.* [Fr. *galoper*, from O. Flem. *walop* = a gallop, an extension of O. Low Ger. *wallen* = to boil; A.S. *weallan*; O. Sax. *wallan*; Skt. *valg* = to gallop.]

A. *Intransitive:*

I. *Literally:*

1. To move or run with leaps at great speed, as a horse.

2. To ride at a very rapid pace; to ride a horse which gallops.

"An officer might mount and gallop beyond reach of danger in an hour; but the private soldier must stay and be butchered."—*Macaulay: Hist. Eng.*, ch. xiii.

II. *Fig.:* To move very fast; to hurry; to scamper.

"Who doth he [time] *gallop* withal?"—*Shakesp.: As You Like It*, iii. 2.

B. *Trans.:* To cause to run at great speed: as, To *gallop* a horse.

găl'-lŏp, *s.* [GALLOP, *v.*]

1. The motion or pace of a horse when he runs at full speed, in which he moves by springs, bounds, or leaps, the forefeet being lifted very nearly together, and, while these are in the air, and just upon the point of touching the ground, he lifts both his hind-legs almost at once.

"Their troop came hard upon our back,
With their long *gallop*, which can tire
The hound's deep hate, and hunter's fire."
Byron: Mazeppa, xii.

2. A kind of dance; a Galop (q.v.).

¶ *Hand-gallop:* A slow or gentle gallop, between a canter and a gallop.

găl-lŏp-ade', *s.* [Fr. *galopade.*]

1. *Manége:* A sidelong or curvetting kind of gallop.

2. *Mus.:* A Gallop (q.v.).

găl-lŏp-ade', *v.i.* [GALLOPADE, *s.*] To gallop; to move about briskly; to dance a gallopade.

"The shock-head willows two and two,
By rivers *gallopaded*." *Tennyson: Amphion* 40.

găl'-lŏp-ĕr, *s.* [Eng. *gallop; -er.*]

I. *Ordinary Language:*

1. A horse that gallops.

"Mules are commonly rough *gallopers*, though some of them are very fleet."—*Mortimer: Husbandry.*

2. A man who gallops on a horse, or who makes great haste.

3. One who is always running about.

"If abroad I am a gagling goose; when I return, you are a fine *galloper*."—*Guardian*, No. 132.

* II. *Ordnance:*

1. A carriage on which small guns were carried; it had shafts so as to be drawn without limbers.

2. A light fieldpiece.

"On which Sir John [Cope] advanced two *gallopers*, which presently dislodged them, and 'tis said killed about a dozen of them."—*Lord Loudoun: Account of the Battle of Preston; Trial of Sir John Cope*, p. 139.

galloper-gun, *s.*

Ord.: A small gun carried on a galloper. [GALLOPER, II.]

* **găl'-lŏp-ĭn,** *s.* [Fr. *galopin*, from *galoper* = to gallop.] A servant for the kitchen; a scullion; a cook's boy.

"Dyet for the kitchen and *gallopins*."—*Archæologia*, xv. 7.

găl'-lŏp-ĭng, *pr. pa.*, *a.*, & *s.* [GALLOP, *v.*]

A. *As pr. par.:* (See the verb).

B. *As adjective:*

1. *Lit.:* Moving or running at a gallop.

2. *Fig.:* Very rapid in its progress; as, a *galloping* consumption, one which soon arrives at a fatal termination.

C. *As subst.:* The act of moving at a gallop.

"I did heare
The *galloping* of horse." *Shakesp.: Macbeth*, iv. 1.

galloping-consumption, *s.*

Pathol.: Acute pulmonary phthisis, in contradistinction to chronic phthisis. Named on account of its usually very rapid fatality.

găl-lō-tăn'-nĭc, *s.* [Pref. *gallo-*, and *tannic.*] [TANNINE.]

* **găl'-lōw** (1), **găl'-lȳ̆,** *v.t.* [A.S. *agælwan* = to stupefy.] To frighten, to terrify, to affright.

"The wrathful skies
Gallow the very wanderers of the dark."
Shakesp.: Lear, iii. 2.

* **găl'-lōw** (2), *v.t.* [GALLOW, *s.*] To hang; to put to death by hanging.

"With grete Jewes he is *galwed*."—*Legend of the Holy Rood*, p. 132.

* **găl'-lōw,** *s.* [GALLOWS.]

* **gallow-clapper,** *s.* A term of reproach or contempt.

gallow-grass, *s.* Hemp, as furnishing halters for the gallows.

* **gallow-tree,** * **galow-tree,** * **galowe-tree,** *s.* A gallows.

"The more buxum wyll he bee,
That he were borowyd fro the *galow tree*."
Le Bone Florence of Rome; Ritson, vol. iii.

Găl'-lō-wāy̆, *s.* [See def.]

1. The name of a district in the south of Scotland, comprehending the shire of Wigton, and the Stewartry of Kircudbright.

2. A species of horse of a small size, but very hardy and enduring.

"Tradition reports that this kind [*galloways*] of horses are sprung from some Spanish stallions, which swam on shore from some of the ships of the Spanish armada, which were wrecked on the coast, and coupling with the mares of the country, peopled the kingdom with their posterity. They were much esteemed and of a middling size, strong, active, nervous, and hardy, and were called *Gallowaye*, from being first known in the countrey which bears that name."—*Berenger: On Horsemanship*, vol. i., p. 205.

3. A breed of cattle, generally dark in colour, indigenous to Galloway.

galloway-dyke, *s.* A wall built firmly at the bottom, but no thicker at the top than the length of the single stones, loosely piled the one above the other.

"The cheapest, the most valuable, the most speedily raised, the most lasting, and the most general fence is the *galloway-dike*."—*P. Auchterderran, Stat. Acc.*, i. 451.

galloway-nag, *s.* A galloway.

* **găl'-lōw-glass,** * **găl'-lō-glass,** *s.* [Ir. *galloglach* = a heavy-armed soldier; from *giolla* = a man-servant, a gillie, and *gleac-aim* = to wrestle.] The name given to a heavy-armed foot-soldier in Ireland and the western islands. It is opposed to kerne (q.v.).

"A puissant and mighty power
Of *gallowglasses* and stout kernes,
Is marching hitherward in proud array."
Shakesp.: 2 Henry IV., iv. 9.

* **gallows-faced,** *a.* Rascally-looking; hang-dog.

"Thou *gallows-faced* vagabond."—*H. Brooke: Fool of Quality*, ii. 16.

gallows-frame, *s.*

1. The frame of a gallows.

2. The same as GALLOWS, II. 3.

* **gallows-free,** *a.* Saved from hanging.

"Let him be *gallows-free* by my consent."
Dryden: Absalom & Achitophel, ii. 431.

gallows-maker, *s.* One whose trade it is to build gallows.

"The *gallows-maker*; for that frame outlives a thousand tenants."—*Shakesp.: Hamlet*, v. 1.

* **gallows-ripe,** *a.* Ready for hanging.

"Lo se again, as one not yet *gallows-ripe*."—*Carlyle: French Revolution*, pt. ii., bk. v., ch. iii.

gallows-stanchions, *s.pl.*

Naut.: The same as GALLOWS-BITTS (q.v.).

gallows-top, *s.*

Naut.: A crosspiece of timber tenoned on to the gallows-bitts at or near the top.

găl'-lōw-şĕş, *s.pl.* [GALLOWS, I. 3.]

* **găl'-lōwş-nĕss,** *s.* [Eng. *gallows; -ness.*] Badness, rascality.

"I never knew your equals for *gallowsness*."—*G. Eliot: Adam Bede*, ch. vi.

găl'-lōwş-trēe, *s.* [Eng. *gallows*, and *tree.*] The gallows.

"Ho! Provost Marshal! instantly
Lord Denzil to the *gallowstree!*"
Scott: Rokeby, vi. 23.

gâllş, *s.* [GALL, *s.* (2).]

gâll'-sĭck-nĕss, *s.* [Eng. *gall*, and *sickness.*] A kind of remitting bilious fever occurring in the Netherlands; Walcheren fever.

gâll'-stōne, *s.* [Eng, *gall*, and *stone.*]

1. *Of Man:* A biliary concretion, chiefly consisting of cholesterine and colouring matter, forming in the gall-bladder. Gallstones are commonest in advanced life, sedentary occupations, females, or from over-indulgence, and in habitual constipation, and during their passage to the intestine accompanied by the most intense agony, not always depending on the size of the stone. In one case, *post-mortem*, in a female in advanced life, the writer counted eighty-three gallstones, varying in size from a small marble to a pin's head.

2. *Of the inferior animals:* An animal calculus found in the gall-bladder of oxen. This concretion varies a little in colour, but is in general of a beautiful golden yellow, more powerful than gamboge, and is highly reputed as a water-colour. Nevertheless its colour is soon changed and destroyed by strong light, though it is not subject to alteration by impure air.

găl'-lŭs, *s.* [Lat. = a dunghill cock.]

Ornith.: A genus of Phasianidæ, sub-family Phasianinæ (q.v.). *Gallus domesticus* is the domestic fowl; *G. bankivus*, the jungle fowl of Java. This latter was the original at least of the British game-cock, if not even of the other varieties of the domestic fowl.

gâl'-lȳ̆ (1), **gall-ie,** *a.* [Eng. *gall* (1), *s.*; *-y.*] Like gall; bitter as gall.

"And who that is ielous, and aye in a drede
Is full of melancolie and *gallie* ire."
Chaucer: Remedy of Love.

gally-worm, *s.*

Zool.: Polydesmus, a genus of Millepedes.

gâl'-lȳ̆ (2), *a.* [Eng. *gall* (3), *s.*; *-y.*] Wet, moist, worn. Applied to land where the grass has been worn away.

* **găl'-lȳ̆,** *v.t.* [GALLOW (1), *v.*] To frighten.

* **găl'-lȳ̆,** *s.* [GALLEY.]

* **gal-ly-gas-coynes,** *s.* [GALLIGASKINS.]

* **găl'-meȳ̆,** *s.* [Ger. *galmei*, from Eng., &c., *calamine* (q.v.).]

Min.: The same as Calamine (q.v.).

ga-lŏçhe', ga-lŏshe', go-lŏshe', go-lŏsh', *s.* [Fr. *galoche* = a wooden shoe, a clog, from Low Lat. *calopedia* = a clog; Gr. καλοπόδιον (*kalopodion*), dimin. of καλόπους (*kalopous*) = a shoemaker's last: κᾶλον (*kalon*) = wood, and πούς (*pous*), genit. ποδός (*podos*) = a foot.]

1. A patten, clog, or wooden shoe.

"Ne were worthy to unbocle his *galoche*."
Chaucer: C. T., 10,869.

2. An over-shoe, worn to keep the feet dry.

3. A legging, a gaiter, covering the upper part of the shoe and the bottom of the leg.

* **ga-loon',** *s.* & *a.* [GALLOON.]

găl'-ŏp, *s.* [Fr.] [GALLOP.]

I. *Ord. Lang.:* A gallop.

II. *Music:*

1. A lively dance in 2-4 time, originally a separate and independent dance, but now also forming a portion of a set of quadrilles.

2. The music to which this dance is performed.

*** găl'-ō-pĭn,** *s.* [GALLOPIN.]

gạ-lōre', *s.* or *adv.* [Irish and Gael. *go leòr* = enough: *go* = to, and *leòr* = enough.] Plenty, abundance, in plenty.

gạ-lŏshe', *s.* [GALOCHE.]

gạ-lôu-bêt (*t* silent), *s.* [Fr.]

Mus.: A small flute of a primitive character with three holes, similar to the Picco pipe.

*** gal-ox-ie,** *s.* [GALAXY.]

*** galpe,** *v.i.* [A.S. *galpian* = to applaud; O.Sax. *galpôn* = to cry out, to boast; M. H. Ger. *galpen* = to bark.]

1. To cry out, to yelp.
2. To gape, to yawn.

"Whan a man *galpeth* than me croyseth him." *Trevisa*, v. 389.

3. To belch.

*** galp-er,** *s.* [Eng. *galp(e)*; *-er.*] One who gapes or yawns.

*** gal-ship, * gol-sipe,** *s.* [A.S. *gálscipe.*] Lechery, lasciviousness.

*** gâl'-sŏme,** *a.* [Eng. *gall* (1), s.; suff. *-some.*] Bitter, malignant.

"*Galsome* bitterness, and wilful fraud and falsehood."—*Bp. Morton.*

gâlt (1), *s.* [GAULT.]

*** galt** (2), *** galte,** *s.* [Icel. *galti* = a boar.] A young sow or boar when castrated.

"*Galt*, a yonge hogge or sow. *Porcetra.*"—*Huloet.*

gạ-lŭn'-çha, *s.* [Name in some East Indian languages.]

Pharm.: An Indian febrifuge, prepared from the stems of *Tinospora verrucosa* and *T. cordifolia.*

găl-văn'-ĭc, *a.* [Ital. *Galvan(i)*, and Eng. &c., suff. *-ic.*] Of or belonging to Galvani. [GALVANISM.]

galvanic-battery, *s.*

Elect.: A number of connected galvanic cells.

galvanic-cell or **pair,** *s.*

Elect.: A combination of two metals in a liquid chemically acting upon one to a greater extent than upon the other.

galvanic-electricity, *s.*

Elect.: Chemical or dynamical electricity.

galvanic-moxa, *s.*

Elect.: A term applied by Fabré Palaprat to the application of platinum rendered incandescent by a galvanic current, as a cauterising agent of the nature of a moxa.

galvanic-pair, *s.* [GALVANIC-CIRCUIT.]

galvanic-pile, *s.*

Elect.: A column of alternate plates, such as zinc and copper. [VOLTAIC-PILE.]

galvanic-shock, *s.*

Elect.: A shock felt by a nerve placed or connected with an inductive coil charged by a galvanic cell.

găl-văn'-ĭ-cạl, *a.* [Eng. *galvanic*; *-al.*] The same as GALVANIC (q.v.).

găl'-vạn-ĭsm, *s.* [Named after Aloysius Galvani, who was born at Bologna in 1737, published in 1791 his celebrated work, *Aloysii Galvanii de viribus Electricitatis in Motu Musculari Commentarius*, and died in his native town in 1798.]

Physics: The branch of electric science to which an experiment by Galvani gave birth. His wife, who was making soup from frogs, happened to put them, after being skinned, in proximity to a charged electrical machine belonging to her husband. On touching them with a scalpel their legs became greatly convulsed. Galvani on his return was told what had occurred, and repeated the experiment on several occasions. He united the lumbar nerves of a dead frog with its crural muscles by a metallic circuit. He came to the erroneous conclusion that animal electricity existed in the nerves and muscles of frogs, &c. In this explanation Galvani ignored the metallic connecting wire. His contemporary, Volta, gave attention to this, and found that the contraction of the limbs is more energetic when the connecting arc is made of two metals instead of one. He therefore inferred that the metals took the active part in producing the contraction, and the disengagement of electricity was due to their contact, and that the animal parts constituted only a conductor, and at the same time a very sensitive electroscope. In 1793 he published these views, and in 1800 first described and constructed what has since been called after him the Voltaic pile. [PILE; see also BATTERY, B. III. 4.] Febroni, observing that the discs of zinc in the pile became oxidized in contact with the acidulated water, considered, as did Woolaston and Davy, that the oxidation was the chief cause why electricity was disengaged. Now Voltaic piles have nearly given place to Voltaic or Galvanic batteries, of which there are many varieties. [BATTERY, B. III. 4.]

găl'-vạn-ĭst, *s.* [Ital. *Galvan(i)*; Eng., &c. suff. *-ist.*] A proficient in galvanism.

găl-vạn-īz-ā'-tion, *s.* [Eng. *galvaniz(e)*; *-ation.*]

1. The act or process of galvanizing.
2. The state of being galvanized.

găl'-vạn-īze, *v.t.* [Eng. *galvan(ic)*; Eng., &c. suff. *-ize.*]

1. *Of metals:*

(1) To affect with galvanism.

(2) To plate with gold, silver, &c., by means of galvanism.

2. *Of the human or animal frame:* To restore to consciousness from a fainting fit, &c., by means of galvanic action.

3. *Of immaterial things:* To give life, spirit, or vitality to.

găl'-vạn-ized, *pa. par.* & *a.* [GALVANIZE, *v.t.*]

galvanized-iron, *s.*

1. *Properly:* Iron coated with zinc by galvanic deposition.

2. *Less properly:* Iron coated with zinc without galvanism. The iron being cleaned by dilute acid and friction, is heated and plunged into a bath of melted zinc covered with sal-ammoniac, and stirred up till the surface becomes coated with zinc.

găl'-vạn-īz-ẽr, *s.* [Eng. *galvaniz(e)*; *-er.*] One who or that which galvanizes.

găl-vạn-ō-, *pref.* [*Galvan(i)*, *-o* connective.] Relating to Galvani, the discoverer of galvanism.

găl-vạ-nō-câus'-tĭc, *a.* [Pref. *galvano-* (q.v.), and Eng. *caustic.*]

Elect. & Med.: Relating to the use of heat generated by galvanism as a caustic.

găl-văn'-ō-glŷph, *s.* [Pref. *galvano-*, and Gr. γλυφή (*gluphē*) = an engraving.] An engraving produced by the process of galvanoglyphy (q.v.).

găl-vạn-ŏg'-lŷ-phy, *s.* [Pref. *galvano-*, and Gr. γλύφω (*gluphō*) = to hollow out, to engrave.]

Engraving: A process in which the ground is spread on a clean zinc plate and etched. Succeeding coats of varnish are spread by a roller on the ground, avoiding the obliteration of the lines, which become deeper with each coat. The finished plate becomes a matrix for a reverse impression obtained in the electro-bath, and this reverse is used to print from in the ordinary manner.

găl-vạn'-ō-graph, *s.* [Pref. *galvano-*, and Gr. γραφή (*graphē*) = a drawing, a delineation.] A picture produced by galvanography (q.v.).

găl-văn-ō-grăph'-ĭc, *a.* [Eng. *galvanograph(y)*; *-ic.*] Produced by or in any way connected with the process of galvanography (q.v.).

găl-vạn-ŏg'-rạ-phy, *s.* [Pref. *galvano-*, and Gr. γραφή (*graphē*) = a drawing, a delineation.]

Engraving: A process of Austrian origin, by which a plate of silvered copper is covered by an artist with different coats of a somewhat transparent pigment, so that on the dark portions the paint is thick and raised, and the surface is relatively depressed in the light tints. A copy of this is made by the electrotype process; the darker being now the deeper portions, the whole forms an intaglio, like a copperplate, and is printed from by the copperplate-printing process.

găl-vạn-ŏl'-ō-ġĭst, *s.* [Pref. *galvano-*, Gr. λόγος (*logos*) = discourse, and Eng., &c. suff. *-ist.*] One who describes the phenomena of galvanism; a writer on galvanism.

găl-vạn-ŏl'-ō-ġy, *s.* [Pref. *galvano-*, and Gr. λόγος (*logos*) = discourse.] A description of galvanism; a treatise on its phenomena.

găl-văn-ō-măg-nĕt'-ĭc, *a.* [Pref. *galvano-*, and Eng. *magnetic.*]

Elect: The same as Electromagnetic (q.v.).

găl-van-ŏm'-ĕ-tẽr, *s.* [Pref. *galvano-*, and Gr. μέτρον (*metron*) = a measure.]

Elect. Machine: A multiplier; a very delicate apparatus for determining the existence, direction, and intensity of currents. It was invented by Schweigger, in Germany, in 1819, just before Œrsted, in Denmark, in the same year, discovered the law of directive action, which a fixed current excites at a distance on a magnetic needle. In connection with the construction of the Indicator telegraph (q.v.), Ampére, Arago, Schilling, Gauss, Weber, Alexander, all used the principle, but it was

GALVANOMETER.

carried out in a superior manner to any by Cooke and Wheatstone in 1837. The galvanometer consists of a magnetic needle suspended by a filament of silk, and surrounded in the plane of the magnetic meridian by a copper wire, forming a complete circuit round the needle in the direction of its length. The actions of the four branches of the circuit give the North Pole the same direction. The coiling of the copper wire in the direction of the needle multiplies the current. By making several, though not an indefinite number of circuits, all insulated, the action of the instrument becomes more powerful, and the deflection of the needle greater. If there be two or three thousand turns of fine wire, with their coils carefully insulated by means of silk and shellac, currents of high intensity will be generated.

¶ (1) *Differential galvanometer:*

Elect. Mach.: An instrument designed to ascertain a difference in the intensity of two currents. It consists of a needle like that in an ordinary galvanometer, round the frame of which are coiled two wires of the same kind and size, completely isolated from each other, and with binding screws, so that separate currents can be passed through each of them. If the currents are of the same intensity, but in different directions, there is no deflection, but, where the needle is deflected, one of the two currents differs from the other.

(2) *Marine galvanometer:*

Elect. Mach.: A galvanometer designed to test the insulation of submarine cables, and at the same time unaffected by the pitching and rolling of the ship. It consists of several thousand coils of copper wire-insulating. In the centre of the coil is a slide carrying the magnet; it is attached to a mirror of thinly silvered glass. A single fibre of silk is stretched across the slide, to this the mirror and magnet are attached in such a manner that the fibre exactly passes in every position through the centre of gravity. The slide fits into a groove in the coil, and the whole is enclosed within a wrought-iron case, with the aperture in front, and a wrought-iron lid on the top. There are also an adjusting magnet and a scale.

găl-văn-ō-mĕt'-rĭc, *a.* [Pref. *galvano-*, and Eng. *metric* (q.v.).] Pertaining or relating to the measurement of magnetic currents.

găl-vạn-ō-plăs'-tĭc, *a.* [Pref. *galvano-*, and Eng. *plastic.*] Of or belonging to the art or process of electrotyping (q.v.).

găl-văn'-ō-scōpe, *s.* [Pref. *galvano-*, and Gr. σκοπέω (*skopeō*) = to look at anything.]

Elect. Mach.: An instrument for measuring the strength of galvanic currents. Example, a magnetic needle.

găl-văn-ō-scŏp'-ĭc, *a.* [Eng. *galvanoscop(e); -ic.*] Pertaining to a galvanoscope.

găl-vạn-ō-thĕr-mŏm'-ĕ-tĕr, *s.* [Pref. *galvano-*, and Eng. *thermometer.*]

Mach.: An instrument for measuring the heating effect of a galvanic current.

* **gal-ver-ly,** *adv.* [A corrupt. of *deliverly* (q.v.).] Cleverly, capitally.

"A light gennet that is young and trotteth *galverly.*"—*Wriothesley: To Sir T. Wyatt,* Oct. 1537.

* **galwes,** *s.* [Gallows.]

* **gam,** *s.* [Game.]

ga'-mạ, *s.* [Port., = a doe.] See compound.

gama-grass, *s.*

Bot.: Tripsacum dactyloides. It is regarded in Mexico as very valuable for fodder.

* **gamaieu,** *s.* [Cameo.]

gạ-ma'-sĕ-ī, gạ-măs'-ĭ-dĕş, *s. pl.* [Mod. Lat. *gamas(us)* (q.v.); Lat. masc. pl. adj. suff. *-ei*, or masc. and fem. *-ides.*]

Zool.: A tribe of Arachnida (Spiders), order Acarina. The forceps is didactylous, the pulpi projecting or very distinct, and in the form of a thread. They generally attach themselves to the bodies of beetles.

* **gạ-măsh'-ĕs,** * **gạ-măçh'-ĕs,** *s. pl.* [O. Fr. *gamaches;* Ital. *gamascie* = splatterdashes; O. Fr. *gambe* (Fr. *jambe*) = the leg.]

1. High boots, buskins, or startups.

2. Short splatterdashes worn by ploughmen.

gạ-măss', *s.* [N. Amer. Indian *squamash.*]

Bot.: The biscuit root, *Camassia esculenta.*

găm'-ạ-sŭs, *s.* [Etym. doubtful.]

Zool.: The typical genus of Gamasei (q.v.).

găm̆b, gambe, *s.* [O. Fr. *gambe;* Fr. *jambe;* Ital. *gamba* = the leg.]

Her.: The whole foreleg of a lion or other beast. If couped or erased near the middle joint, it is a paw.

găm'-bạ (1), *s.* [Low Lat. = a hoof.]

Comp. Anat.: The elongated metacarpus or metatarsus of the Ruminantia and Solidungula.

găm'-bạ (2), *s.* [Ital.] [Gamb.]

Music:

1. A stringed instrument of the viol sort, called also Viola da gamba, with six strings,

GAMBA.

weaker in tone and smaller in size than the violoncello, so called because it was held between the knees of the player, as distinguished from Viola da braccia, played on the arm. [Viola; Viol-de-gambois.]

2. An organ-stop, the pipes of which are, in continental organs, generally cylindrical, of small scale, and well cut up, but sometimes conical in shape. Its tone is pungent, and not unlike that of a violin or violoncello. In England the Bell Gamba is more commonly met with. (*Stainer & Barrett.*)

găm-ba'-dō (1), **găm-bā'de,** *s.* [Ital. *gamba* = the leg.]

1. A leather legging for equestrians. It is wrapped around the leg, reaching from the knee to the foot, and is fastened at the side by clasps.

"The pettifogger ambles to her in his *gambadoes* once a week."—*Dennis: Letters.*

2. A kind of leather case attached to a saddle in place of stirrups.

* **găm-ba'-dō** (2), *s.* [Gambol.] A gambol, a frolic.

* **gam-bauld,** *s.* [Gambol, *s.*]

gam-beer, *s.* [Gambier.]

* **găm'-bĕ-şŏn,** * **găm'-bĭ-şŏn,** * **gam-bas-sowne,** * **gaum-bi-soun,** * **gam-e-son,** *s.* [O. Fr. *gambaison, gambeson.*]

Old Armour: A body-covering, stuffed with wool, and padded in parallel lines of needle-work. It was worn beneath the hauberk of a knight as a padding for the armour. The surcoat was also quilted with cotton wool. An early and curious example may be seen in the surcoat of Edward the Black Prince, which is still suspended over his tomb in Canterbury Cathedral.

GAMBESON.

găm'-bĕt, găm-bĕt'-ta, *s.* [Fr. & Prov. *gambette;* Ital. *gambetta.*]

Ornith.: Totanus gambetta, Linnæus's *Tringa gambetta,* the Redshark or Gambet snipe. In summer it is brown above with black spots, in winter it is almost of a uniform grey-brown; its legs are red. Found in Scandinavia, in Iceland, and in the Arctic regions.

găm'-bĭr, găm'-bĭĕr, *s.* [A Malayan word.]

Pharm.: An extract from the leaves of *Uncaria gambir,* a cinchonaceous plant. It is a simple astringent. It is chewed by the Malays with betel leaf and areca, specially to relieve aphthous eruptions of the mouth and fauces. It is called also *Terra japonica.*

* **găm'-bĭ-şŏn,** *s.* [Gambeson.]

* **găm̆b'-ĭst,** *s.* [Ital. *gamba;* Eng. suff. *-ist.*]

Music: A performer on the viol di gamba.

găm'-bĭt, *s.* [Fr.; Ital. *gambetto* = a tripping up; *gamba* = the leg.]

Chess: A chess-opening; the sacrifice of a pawn in the beginning of the game in order to obtain a favourable position for attack.

găm'-ble, *v.i. & t.* [Formed from *game* (q.v.) by the addition of the suff. *-le*, the *b* being excrescent, as in *humble, number,* &c.

A. *Intrans.:* To play or game for a stake.

"Where neither strumpets' charms, nor drinking-bout, Nor *gambling* practices, can find it out."
Cowper: Tirocinium, 246.

B. *Trans.:* To waste or squander in gambling; followed by *away;* as, He *gambled away* all his property.

găm'-blĕr, *s.* [Eng. *gambl(e); -er.*] One who gambles; one given to gambling or playing for a stake.

"The appointment of a ruined *gambler* to such a trust would alone have sufficed to disgust the public."
—*Macaulay: Hist. of Eng.,* ch. vi.

găm-bō'ge (or **găm-bô'ge**), *s.* [A corrupt. of *Cambodia,* the name of the district in Annam, where it is found.]

1. *Chem.:* Gamboge, or camboge, is a gum resin containing about 70 per cent. of resin, and 24 per cent. of soluble gum. It is obtained by piercing the bark of *Garcinia morella,* var. *pedicellata,* a tree belonging to the order Guttiferæ, growing in Cambodia, Siam, and the south part of Cochin China. The juice is allowed to harden in bamboo reeds, hence it occurs in commerce in the form of pipes which are striated externally. Gamboge is hard brittle, breaking with a yellow-brown vitreous conchoidal fracture, its powder is a bright yellow colour, it is inodorous, has a slight taste, but when chewed is acid. When rubbed with water the gum dissolves, forming a yellow emulsion with the suspended resin. Gamboge is soluble in alcohol and in ammonia. The resin can be extracted by ether; it is a hyacinth-red colour, and yields a yellow powder; it dissolves in alkalies with a deep red colour; the resin fused with caustic potash yields phoroglucin, iso-uvitic acid, pyrotartaric acid, and an amorphous syrupy acid. Gamboge is used as a pigment in water-colour painting. By the action of nitric acid it is oxidized into picric and oxalic acids. An inferior kind of gamboge in the form of flat cakes is prepared in Ceylon from *Hebradendron gambogioides.*

2. *Pharm.:* Gamboge is used in the preparation of *Pilula Cambogiæ Compositæ,* Compound Gamboge Pill, composed of gamboge, Barbadoes aloes, compound powder of cinnamon, hard soap, and syrup. Gamboge acts as a drastic hydragogue purgative, it causes vomiting and griping, it is seldom given alone, but combined with cream of tartar in cases of dropsy, or with calomel in cerebral disease. In large doses gamboge is a powerful irritant, causing inflammation of the alimentary canal, which may end fatally.

găm-bōǧ'-ĭ-ạn (or **ō** as **ô**), *a.* [Eng. *gambog(e); -ian.*] Of or pertaining to gamboge.

găm-bōǧ'-ĭc (or **ō** as **ô**), *s.* [Eng. *gambog(e); -ic.*] Pertaining to or obtained from gamboge.

găm'-bŏl, * **gam-bold,** * **gam-bole,** * **gam-boll,** *v.i.* [Gambol, *s.*]

1. To frisk or skip about; to frolic; to dance; to play in frolics.

"Bears, tigers, ounces, pards,
Gambolled before them." *Milton: P. L.,* iv. 345.

* 2. To leap, to start.

"I the matter will record, which madness
Would *gambol* from." *Shakesp.: Hamlet,* iii. 4.

găm'-bŏl, * **gam-bauld,** * **gam-bold,** * **gam-boll,** *s.* [O. Fr. *gambade* = a gambol, from Ital. *gambata* = a kick; *gamba* = the leg.] A skipping or dancing about; a frolic; a caper; merriment, sport.

"All kind of freedom of speech was then [in their Saturnalia] allowed to slaves, even against their masters; and we are not without some imitation of it in our Christmas *gambols.*"—*Dryden: Juvenal.* (Dedic.)

¶ For the difference between *gambol* and *frolic,* see Frolic.

* **gam-bone,** *s.* [Gammon, *s.* (1).] A gammon.

găm'-brĕl, *s.* [Ital. *gambrella,* dimin. of *gamba* = a leg.]

I. *Ordinary Language:*

* 1. The hind leg of a horse.

"As appears it hath, by the weight which the tendon lying on a horse's *gambrel* doth then command."—*Grew: Cosmologia Sacra,* bk. i., ch. v.

2. A bent stick like a horse's hind leg; used for suspending carcasses.

II. *Arch.:* A gambrel-roof (q.v.).

gambrel-roof, *s.*

Arch.: A roof with two sets of rafters at different inclinations; a mansard roof.

gambrel-roofed, *s.* Having a gambrel or mansard roof.

* **găm'-brĕl,** * **găm'-brĭl,** *v.t.* [Gambrel, *s.*] To truss or hang up by means of a gambrel.

"[I'll] carry you *gambrilled* thither like a mutton."
Beaum. & Flet.: The Nice Valour, iv. 1.

găm-broŏn' *s.* [Etym. doubtful.]

Fabric: A kind of twilled linen cloth for linings.

gāme, * **gam,** * **gam-en,** * **gam-myn,** * **gam-yn,** * **gome,** *s. & a.* [A.S. *gamen, gomen* = sport, game; O. Sax. *gaman;* Icel. *gaman;* Dan. *gamen* = mirth; O. H. Ger. *gaman;* M. H. Ger. *gamen* = joy; O. Fris. *game, gome;* Sw. *gamman.*]

A. *As substantive:*

* 1. Sport, merriment, glee.

"Al is *game,* iol, and gle." *Land of Cockayne,* 43.

2. Jest, as opposed to earnest.

"As mocking boys in *game* themselves forswear."
Shakesp.: Midsummer Night's Dream, i. 1.

* 3. A frolic, a gambol.

"Thereto she coude skip, and make a *game,*
As any kid." *Chaucer: C. T.,* 3,259.

4. Any contrivance, arrangement, or institution designed to afford recreation, sport, or amusement: as, the *game* of cricket, or of football; in the plural, contests in different sports, as wrestling, running, &c.

"There the youthful Nortons met
To practise *games* and archery."
Wordsworth: White Doe of Rylstone, c. v.

5. A single match or contest in any sport: as, a *game* of chess, a *game* of cricket.

6. The requisite number of points or advantages to be gained in order to obtain the victory in a game.

* 7. Field sports: as hunting, coursing, shooting.

"Some sportsmen, that were abroad upon *game*, spied a company of bustards and cranes."—*L'Estrange.*

8. Animals pursued or taken in field sports; specif., animals so termed in the Game-laws: as pheasants, grouse, &c.

"The offence of destroying such beasts and fowls as are ranked under the denomination of *game*, was formerly observed to be an offence in all persons alike, who had not authority from the crown to kill *game*, by the grant of either a free warren, or at least a manor of their own. But the laws, called the game-laws, also inflicted additional punishments on persons guilty of this general offence, unless they were people of such rank or fortune as were therein particularly specified. All persons, therefore, of what property or distinction soever, that killed *game* out of their own territories, or even upon their own estates, without the king's licence expressed by the grant of a franchise, were guilty of a first original offence, of encroaching on the royal prerogative."—*Blackstone: Comment.*, bk. iv., ch. 13.

9. The object of pursuit.

"Therefore in towns and cities they abound,
For there the *game* they seek is easiest found."
Cowper: Tirocinium, 520.

10. A recreation, diversion, or pastime.

"An intellectual *game* pursued
With curious subtility."
Wordsworth: Excursion, bk. iii.

11. A scheme, design or object planned.

găṅ′-glĭ-ŏn, *s* (*pl.* **găṅ′-glĭ-a**). [Lat., from Gr. γάγγλιον (*ganglion*) = a tumour near a tendon.]

1. *Anatomy:*

(1) *Human:*

(*a*) A small mass of vascular neurine, situated in the course of a nerve, and distinct both from the brain and from the spinal cord. The sympathetic system of nerves consists of a series of ganglia, extending on each side of the vertebral column, from the head to the coccyx, connecting with all the other nerves of the body. Each ganglion is a distinct centre, giving off branches in four directions, superior, inferior, external, and internal. They are divided into cranial ganglia, cervical, thoracic, &c.

(*b*) A lymphatic gland.

(2) *Comp.:* A centre of the nervous system, containing nerve cells, and receiving and giving out impressions. (*Huxley.*)

2. *Surg.:* A globular indolent tumour, situated on the course of a tendon. It is produced by the elevation of the sheath of the tendon and the infusion into it of a viscid fluid.

3. *Bot.* (*Pl.*): The mycelium of certain fungals.

I. *Ordinary Language:*

1. A passage or means of temporary ac…

to a place or building, consisting of an inclined plane of planks; specif., the opening in the bulwarks of a vessel by which persons come on board or disembark; also the temporary bridge affording means of passing from the ship to the shore, or vice versa.

"I had hardly got into the boat, before I was told they had stolen one of the ancient stanchions from the opposite *gangway*, and were making off with it."—*Cook: Second Voyage*, bk. ii., ch. ix.

2. In the House of Commons a narrow passage running across the House, and dividing the seats on each side into two parts. Above the gangway, that is, near the Speaker's end of the House, sit the Ministry and Opposition with their respective adherents, the former on the Speaker's right, the latter on his left. Below the gangway sit the neutral or independent members, whence the phrase *To sit below the gangway*, as applied to a member, expresses that he is independent and not bound to either party.

II. *Mining:* A main level, applied chiefly to coal mines.

¶ *To bring to the gangway:*

Naut.: To punish a sailor by seizing him up and flogging him. The expression derives its force from the fact that before the abolition of corporal punishment in the service, sailors about to be flogged were tied to a grating in the gangway, where the sentence was carried out.

găńg'-wēek, *s.* [Eng. *gang*, and *week*.] Rogation-week, when the bounds of parishes are perambulated or beaten. [GANGDAYS.]

găn-ōĭ'-dĕ-ī, gąn-ōĭ'-dĕ-ą, *s. pl.* [Masc. or neut. pl. of Mod. Lat. *ganoideus*.] [GANOID.]

Ichthy.: The name given by Agassiz to one of the four orders into which, chiefly for palæontological purposes, he divided the class of Fishes. It has since been adopted by Profs. Müller, Owen, Huxley, &c., but with certain modifications. The essential character of the fishes belonging to the order is that they have Ganoid scales (q.v.). These constitute the exoskeleton. The endoskeleton is cartilaginous instead of osseous. There are generally two pairs of fins; the first ray is usually a strong spine. The tail is generally heterocercal. The few living species are mostly freshwater, but marine forms must once have abounded. The ganoids commenced at least as early as the deposition of the Upper Silurian Rocks, and have continued, though their relative importance is much diminished, till now. The order has been divided into:—

Section 1.—Lepidoganoidei. Sub-orders: (1) Amiadæ: (2) Lepidosteidæ; (3) Platysomidæ; (4) Crossopterygidæ; (5) Acanthodidæ.
Section 2.—Placoganoidei. Sub-orders: (1) Ostracostei; and (2) Chondrosteidæ.

găn-ō'-mą-līte, *s.* [Gr. γάνωμα (*ganōma*) = brightness, brilliance; suff. *-lite*.]

Min.: A silicate of lead and manganese, represented by the formula $(PbMn)SiO_3$. It occurs massive, without cleavage, associated with native lead and other minerals at Långban, Wermland, Sweden. It was described by Nordenskiöld. (*T. Davies, F.G.S.*)

gąn-ŏm'-ą-tīte, *s.* [Gr. γάνωμα (*ganōma*), genit. γανώματος (*ganōmatos*) = brightness, brilliance, and suff. *-ite* (*Min.*) (q.v.).]

Bot.: Garryads. A genus of Diclinous Exogens, alliance Garryales, of which it is the type. It consists of shrubs having opposite, exstipulate leaves, and flowers arranged in pendulous amentaceous racemes, within connate bracts. Wood without concentric zones or dotted ducts; flowers unisexual amentaceous; male flower sepals, four; stamens, four, alternate, with the sepals inelastic; female flower calyx, superior two-toothed; ovary, one-celled style, two setaceous: ovules two, pendulous, with long funiculi; pericarp indehiscent, consisting of a two-seeded berry. Known genera, two; species, six. (*Lindley.*)

găr'-rȳ-ăds, *s.pl.* [Mod. Lat. *garry(æ): -ads.*]

Bot.: The name given by Lindley to the order Garryaceæ (q.v.).

găr'-rȳ-ạl, *a.* [Mod. Lat. *garry (a); -al.*]

Bot.: Pertaining to Garrya, or the Garryaceæ (q.v.), as the *Garryal* Alliance.

găr-rȳ-ā'-lēs, *s.pl.* [Mod. Lat. *garry(a);* Lat. masc. or fem. suff. *-ales.*]

Bot.: An alliance of Diclinous Exogens, having monochlamydeous, sometimes amentaceous, flowers, inferior fruit, and a minute embryo lying in a quantity of albumen. Orders, Garryaceæ and Helwingiaceæ (q.v.).

***garse, *gaar-cyn,** *v.t.* [O. Fr. *garser.*] To bleed.

"To *garse: scarificare.*"—*Cathol. Anglicum.*

***garse, *gaarce, *garce, *gerse,** *s.* [Low Lat. *garsa.*] [GASH, *s.*]

1. A cut, a gash.

"A *garse* or gash, *incisura.*"—*Levins: Manip. Vocabulorum.*

2. The act of bleeding.

***gar-son,** *s.* [Fr. *garçon* = a boy, a servant.] A menial servant. (*Toland.*)

***gar'-sŭm, *gar-summe, *ger-some,** *s.* [A.S. *gersum* = treasure; Icel. *gersemi.*]

1. Treasure, valuables, property.

"He us yeue . . . gold and *garsume.*"
Layamon, i. 40.

2. An earnest penny; a fine on entering into a tenancy.

gar'-ten, *s.* [GARTER.]

gar'-tĕr, *s.* [O. Fr. *gartier, jartier*, from O. Fr. *garret;* Fr. *jarret* = the ham of the leg, from Bret. *gar, garr* = the shank of the leg; Ir. *cara* = the leg; Wel. & Corn. *gar;* Fr. *jarretière;* Sp. *jarretera.*] [GARROTE, *s.*]

I. *Ordinary Language:*

1. A string or riband by which a stocking is held upon the leg.

"Let their heads be sleekly combed, their blue coats brushed, and their *garters* of an indifferent knit."—*Shakesp.: Taming of the Shrew*, iv. 1.

2. In the same sense as II. 3 (2).

3. The badge of the Order of the Garter.

"The *garter*, blemished, pawned his knightly virtue."
Shakesp.: Richard III., iv. 2.

II. *Technically:*

1. *Carp.:* A semicircular plate, acting as a key, which passes through a slot in the wooden jaw of a bench-vice, and enters an annular groove in the cylindrical neck of the bench-screw, so that when the latter is unscrewed it brings out the jaw.

2. *Circus (Pl.):* The tapes held up for a performer to leap over.

3. *Heraldry:*

(1) The same as ¶ (1).

(2) The Order of the Garter. [¶ (2).]

(3) The half of a bend.

¶ (1) *Garter King-at-Arms:* The principal King-at-Arms in England, by whom arms are granted and confirmed under the authority of the Earl Marshal. [EARL MARSHAL.] His duties are to attend upon the Knights of the Garter at their installation and other solemnities; to intimate their election; to suspend their banners over their stalls in St. George's Chapel at Windsor; to superintend and marshal their processions, &c. The office was created by Henry V. in 1420.

(2) *The Most Noble Order of the Garter:* The most illustrious Order of British Knighthood, instituted at Windsor by Edward III., about August, 1348, probably on the occasion of some tournament, and as a revival of the Round Table of King Arthur. How much truth there is in the legend which connects the badge and title of this order with the Duchess of Salisbury it is impossible to say, but the story is in no way inconsistent with the spirit of those times. The Order consists of the Sovereign and twenty-five companions, of whom the Prince of Wales is always one. Recent statutes provide for the admission of foreign Sovereigns. The Bishop of Winchester is Prelate of the Order, the Bishop of Oxford Chancellor, and the Dean of Windsor Registrar. Knights are distinguished by the initials K.G. after their names, which take precedence of all other titles except those of royalty. The stalls of the knights are in St. George's Chapel, Windsor Castle. The insignia of the Order and the Garter, with the motto, *Honi soit qui mal y pense* (Dishonour to him who thinks ill of it), the star of eight points, enclosing the cross of St. George, the collar, and the lesser George or jewel, added by Henry VIII. The ribbon, originally black, was changed to sky-blue by Elizabeth, and at the accession of the House regnant, the present dark blue ribbon, from which the jewel is worn pendent, was adopted. (*Boutell.*)

STAR AND JEWEL OF THE ORDER OF THE GARTER.

gar'-tĕr, *v.t.* [GARTER, *s.*]

1. To fasten or tie up with a garter.

"He being in love, could not see to *garter* his hose; and you, being in love cannot see to put on your hose."—*Shakesp.: Two Gentlemen of Verona*, ii. 1.

2. To invest with the Order of the Garter.

"Brydges' wide-wasting hand, first *gartered* knight."
J. Philips: Cider, i.

gar'-tĕr-fĭsh, *s.* [Eng. *garter*, and *fish.*]

Ichthy.: The Scabbard-fish, *Lepidopus argyreus.* [LEPIDOPUS.] It belongs to the Cepolidæ or Riband-shaped family of Fishes.

gar'-tĕr-ĭng, *pr. par., a., & s.* [GARTER, *v.*]

A. *As pr. par.:* (See the verb).

* B. *As adj.:* Of or belonging to the garter.

C. *As subst.:* The act of tying with a garter;

"Where to should I disclose
The *gartering* of her hose."
Skelton: Boke of Philip Sparow.

gar'-tĕr-snāke, *s.* [Eng. *garter*, and *snake.*]

Zool.: The Snake genus Eutania. There are two species, *Eutania sirtalis* and *E. ordinata*, the latter in the Southern States of North America, the other more widely diffused over the Union. Their bite is not venomous.

garth (1), *s.* [Icel. *gardhr* = an enclosure.]

* 1. A close, a croft, a garden, an enclosure.

"The *garth* eke closed is in dyvers wyse."—*Palladius: Husbandrie*, i. 783

* 2. The grass area between or within the cloisters of a religious house.

3. A dam or weir in a river for catching fish.

***garth** (2), ***garthe, *gerth,** *s.* [Icel. *gjörd.*] A band or girth. [GIRTH.]

garth'-măn, *s.* [Eng. *garth* (1), and *man.*] The owner of a garth or weir for catching fish.

gär'-ŭm, *s.* [Lat.] A kind of fish-sauce, prepared from several kinds of fish, particularly the scomber, but formerly from the garus; a pickle made of the gills and blood of the tunny.

gar'-vĭĕ, gar'-vĭĕ-hĕr-rĭng, *s.* [Etym. doubtful.] The name in Scotland for the Sprat (q.v.).

"They are often very successful in taking the smaller fish, such as herrings, *garvies*, or sprats, sparlings or smelts."—*P. Alloa: Statist. Acc.*, viii. 397.

găs, *s. & s.* [Dut. *gas* = a word introduced by the Flemish chemist, Van Helmont, who was born in A.D. 1577. Cf. Dut. *geest* = spirit.] [GHOST.]

A. *As substantive:*

I. *Ordinary Language:*

1. *Lit.:* In the same sense as II. 2.

2. *Fig.:* Empty talk; froth.

II. *Technically:*

1. *Chem.:* A gas is a substance possessing the condition of perfect fluid elasticity, and presenting under a constant pressure a uniform rate of expansion for equal increments of temperature, but when gases reach their maximum densities they behave like vapours. All gases can be condensed into liquids by cold and pressure. Some of the elements, as oxygen, hydrogen, nitrogen, chlorine, and probably fluorine, are gases at ordinary temperatures. Atmospheric air is a mechanical mixture of 77 parts by weight of nitrogen, and 23 of oxygen, or 79 volumes of nitrogen mixed with 21 volumes of oxygen. Gases are formed by the dry distillation of animal and vegetable substances, which yield carbon dioxide, carbon monoxide, ammonia, nitrogen, hydrogen, sulphur dioxide, hydrogen sulphide, and hydrocarbons. Gases as carbon dioxide and hydrogen sulphide are given off during putrefaction; carbon dioxide during fermentation. Ordinary gas used for burning, &c., is prepared by the dry distillation of coal. [COAL-GAS.] Gases are prepared in the wet way by the action of mineral acids on different substances. The resulting gases may be collected: (1) by reception in an exhausted vessel; (2) by displacement of air, the delivery tube proceeding from the generating vessel is made to pass down to the bottom of the receiver placed with its mouth upwards; this method is used for gases which are heavier than air, and are dissolved by water, as chlorine, &c.; (3) collection over liquids, generally mercury, or water; a jar or bottle is filled with the liquid and inverted over a trough filled with the same liquid, and the end of the delivery tube proceeding from the gas-generating apparatus is inserted beneath the mouth of the jar, so that the gas may rise in bubbles through the liquid, displace it, and so fill the vessel with gas. Gases are absorbed by liquids in some cases, the gas forming a chemical compound with the liquid, in other cases the gas has no chemical action on the liquid. Generally the amount of gas absorbed in the latter case decreases with increase of temperature, and the weight of gas absorbed varies directly as the pressure. Charcoal has the property of absorbing many gases, especially ammonia, hydrochloric acid, sulphuretted hydrogen, and sulphurous acid. The specific gravities of elementary bodies in the gaseous state, are for the most part in the same ratio as their atomic weights, but the specific gravities of phosphorus and arsenic are twice as heavy, and mercury and cadmium only half as heavy as their atomic weights. The specific gravity of any compound gas or vapour, referred to

hydrogen as unity, is equal to half its molecular weight.

2. *Comm.:* The gas of commerce is carburetted hydrogen (CH_4). Its frequent disengagement in coal mines with resultant explosions, generally fatal to many lives, has caused the miners to give it the name of "fire-damp." In parts of the world it issues from crevices or holes in the strata in so moderate and continuous a stream, as to burn with a huge jet instead of exploding. This phenomenon is seen in China, in America, and other places, the best-known locality, however, being Baku on the Caspian, where a fire temple is reared with officiating priests of the Parsee faith, who regard the flame as a symbol of the divinity. The ignition of carburetted hydrogen may be seen in any coal fire. It has recently been discovered that giant jets of apparently similar gas flames exist in the sun, and are one main source of its light and heat.

The Rev. Dr. Clayton, rector of Crofton, distilled illuminating gas from coal, catching and keeping the airy substance in a bladder. He communicated the fact in 1688 to Dr. Boyle, who laid it before the Royal Society. In 1750 Dr. Watson, Bishop of Llandaff, not only distilled gas, but conveyed it in pipes from one place to another. In 1792 Mr. Murdoch, of Redruth in Cornwall, used it for lighting his house and offices. In 1798 Murdoch lighted with gas the works of Bolton and Watt, at Soho, near Birmingham, and illuminated them on the rejoicings for peace in 1803. The first part of London thus lighted, was one side of Pall Mall. This was done by Winsor in 1807. Westminster Bridge and then the Houses of Parliament were similarly lighted in 1813, and the streets of both London and Paris in 1815, after which the practice of gas-lighting rapidly spread to all civilized lands. Its supremacy is now (1883) partially threatened by the electric light. The manufacture of gas is not difficult. Only two processes are required; to make or evolve it through the distillation of coal, and then to purify it from tar, ammonia, and sulphur. The chief series of apparatus required for these purposes are the Gas-retort, the Gas-condenser, the Gas-washer, and the Gas-purifier (q.v.).

B. *As adj.:* In any way pertaining or relating to or worked by gas.

gas-alarm, *s.* [GASOSCOPE.]

gas-apparatus, *s.* Apparatus for the manufacture or preparation of various gases.

gas-bath, *s.* A bath heated by gas.

gas-blowpipe, *s.* A form of blowpipe designed to be attached to a gas-pipe, for using gas instead of oil or alcohol. The atmospheric air is driven through the centre tube, adding force and giving a cylindrical form to the flame, which issues at an annular opening.

gas-bracket, *s.* A branch proceeding from a wall and having on its end a burner or burners.

gas-burner, *s.* The jet-piece at which the gas issues. It consists of a slit or of a number of orifices disposed so as to produce the shape of flame required. The fish-tail flame is made by two oblique orifices at an angle of about 60°, so as to cause the jets to cross each other; the object is divergence, to spread the gas and bring the carburetted hydrogen in contact with the air. The cock-spur burner has three apertures, one central and the others divergent. The union burner has a row of holes so disposed that the jets nearly touch and coalesce, each maintaining in part its distinctiveness. The bat's wing has a slit aperture instead of holes, giving a flat, fan-like flame. The beak has a round, smooth hole $\frac{1}{16}$ inch in diameter. An ordinary gas-burner consumes from four to six cubic feet of gas per hour, according to size. [ARGAND.]

gas-check, *s.* [GAS-RING.]

gas-coal, *s.* Any coal, as cannel-coal, used for manufacturing gas.

gas-company, *s.* A joint-stock company formed to supply gas to the inhabitants of a certain district, at certain prices per 1,000 feet.

gas-condenser, *s.* The second in the series of apparatus in the manufacture of gas, consisting of a series of convoluted pipes, surrounded by water. The gas from the retorts is passed through the condenser to rid it of the tar. The condenser gathers about eight or ten gallons of tar from the gas produced by about 2,000 pounds of coal.

gas-engine, *s.* A kind of engine in which the motion of the piston is caused by the combustion or sudden production or expansion of gas mixed with air in a closed cylinder.

gas-fitter, *s.* A workman who lays the pipes and puts up fixtures for gas.

Gas-fitter's gauge: An arrangement by which the tightness of the joints in a line of pipes is ascertained. The pipes being filled with air by a pump, the pressure gauge in connection therewith remains stationary if the joints are perfect. If the gauge fall, ether may be admitted to the interior and the escape detected by a torch.

gas-fixture, *s.* A gas-bracket, a gaselier.

gas-furnace, *s.*

1. A small furnace, much employed for laboratory purposes, and which is so arranged as to receive the maximum heating powers of the gas without regard to its illuminating purposes. Various forms have been contrived.

2. A furnace of which the fuel is gas from burners suitably disposed in the chamber for the purpose required. Steam-boilers and metallurgic furnaces are sometimes heated in this manner.

gas-gauge, *s.* An instrument for ascertaining the pressure of gas. A bent graduated tube containing water or mercury, open at one end and with the other screwed into the vessel containing the gas.

gas-generator, *s.* A chamber in which gas is evolved. The term includes: the retort in which volatile hydrocarbons are evolved by heat, as in the ordinary gas-apparatus; the machine in which air is saturated with the vapour of liquid hydrocarbon; and the machines in which carbonic-acid gas is evolved for aërating water or other purposes.

gas-governor, *s.* A small gas-holder into which the gas enters, and from which it is passed to the mains with a regulated pressure. The velocity of gas in the mains increases in the ratio of the square root of the pressure, so that by adding to this it may either be driven more rapidly or to a greater distance.

gas-heater, *s.* An apparatus contrived for the application of gas to specific purposes of heating.

gas-indicator, *s.* An instrument connected to the main pipe, which indicates by the rising and falling of a spring piston, or a weighted gas-holder, the pressure of gas in the pipe.

gas-jet, *s.*

1. A jet or spout of flame issuing from a gas-burner.

2. A gas-burner.

gas-lamp, *s.* A lamp, the light of which is furnished by gas, as a street lamp.

gas-lantern, *s.* A frame of glass for enclosing one or more gas-burners.

gas-liquor, *s.* An ammoniacal liquor extracted from coal in the distillation of gas. Eight or ten gallons of ammoniacal liquor are extracted from the gas produced from 2,000 pounds of coal, and it is treated by manufacturing chemists, who extract about fourteen ounces of sulphate of ammonia from one gallon of the liquor. A larger yield of ammonia is obtained by adding a small quantity of lime to the coals before they are distilled. (*Brit. Assoc.*, 1883.)

gas-main, *s.* A principal gas-pipe leading from the works, and having branches and distributing pipes. Gas mains are laid in sections, the small end of one entering the wide socket of the adjacent section. A packing of hemp dipped in tar is driven in to form a joint; over this is a luting of clay, within which is poured hot lead. The mains are laid with a gradual slope, and at the foot of each incline, or where two descending slopes meet, a reservoir is formed to collect water of condensation. This chamber has an iron cover [illegible] which is fixed a pipe, which descends [illegible] to the bottom of the reservoir. At the [illegible] mit of the pipe is a screw, which admits [illegible] attachment of a pump, by which the liquid [illegible] the reservoir is removed.

gas-meter, *s.* A machine for [illegible] ing the quantity of gas passing through [illegible] Citizen Seguin described a gas-meter at [illegible] sitting of the National Institute of France, [illegible] October 6, 1797. The wet-meter was invent[illegible] by Clegg, in 1807, and improved by Crosley [illegible] 1815. The dry-meter was invented by Ma[illegible] in 1820, and improved by Defries in 18[illegible] Many improvements and variations have b[illegible] added since. In the wet-meter there is a [illegible] filled to a certain level with water or o[illegible] liquid. Inside this an axis is journalled w[illegible] a series of buckets, each containing a cert[illegible] quantity of gas, supplied by a stream of [illegible] coming in from a pipe. The buckets rot[illegible] allowing the gas to escape by a pipe at [illegible] upper part of the meter, a series of multiplyi[illegible] gear-wheels indicating its amount. The pr[illegible] ciple of the dry register is that of a bell[illegible] alternately filled with gas and emptied, [illegible] number of times this occurs being recorded [illegible] a register. There are other forms of gas-me[illegible]

gas-oven, *s.*

Metall.: The oven in which the waste ga[illegible] taken from the top of the blast furnace [illegible] employed for heating the air for the blast.

gas-pipe, *s.* A pipe for the conveyan[illegible] and distribution of gas. Service-pipes are [illegible] various metals, wrought-iron tubing being [illegible] more common than any other. The sect[illegible] of distributing-pipe have screw-socket co[illegible] lings. A gas-pipe made of brass or copper [illegible] liable to have a deposit of a compound [illegible] acetyline C_2H_2 with copper formed in [illegible] This explodes when heated.

Gas-pipe tongs: [GAS-TONGS].

gas-puddling, *s.*

Iron-works: The puddling of iron by the u[illegible] of gases instead of solid fuel.

gas-purifier, *s.* An apparatus in wh[illegible] gas is purified of its sulphur compounds. T[illegible] purification of gas by passing it through lim[illegible] water was introduced in 1807. The ordin[illegible] illuminating gas, after having been evolved [illegible] the retort, its tar eliminated in the condens[illegible] and its ammonia abstracted in the washer, [illegible] passed through the purifier, which remo[illegible] the sulphur and renders the gas fit for co[illegible] sumption.

gas-register, *s.* An instrument by wh[illegible] the pressure of gas is indicated and recorde[illegible] The rate of pressure is not uniform, but va[illegible] with the season and the hour. An ordin[illegible] pressure during the day is $\frac{4}{10}$ of an inch; th[illegible] is a pressure which will raise a column [illegible] water in a tube to that height. At night th[illegible] pressure is increased according to the ho[illegible] and the season; the quantity burnt in wint[illegible] is double that consumed in summer; no[illegible] gas is burning at 9 p.m. than at 12 p.m.; a[illegible] more at the latter hour than at 3 a.m.

gas-regulator, *s.* A device to equ[illegible] the flow of gas, notwithstanding varying pr[illegible] sure in the main, and the variations prod[illegible] by the turning on or shutting off gas to [illegible] from burners in a building.

gas-retort, *s.* The chamber in wh[illegible] carbonaceous matter is distilled to prod[illegible] illuminating gas. Gas-retorts are made [illegible] iron or clay, and each in shape is a segment [illegible] a cylinder, the flat side forming the flo[illegible] These are set in a brick furnace, with the open ends presented outward ready for cha[illegible] ing.

Gas-retort charger: An apparatus for introdu[illegible] ing the charge of coal into a retort, or ram[illegible] ing the coke therefrom. [STEAM-STOKER.]

gas-ring, *s.*

Ordnance:

1. A thin plate of steel or copper, perf[illegible] ated to the exact size of the calibre of th[illegible] gun, and used as a face-plate to the breech[illegible] block in Sharp's breech-loading rifle, an[illegible] Broadwell's breech-loading ordnance, adopt[illegible] by the Prussian Government. The breech[illegible] block is chambered out larger than the ho[illegible] in the plate, so that the gas from the expl[illegible] sion of a charge flies back into the chamb[illegible]

and presses the plate or ring forward against the breech of the gun; a gas-check.

2. A thin flanged plate of copper or gunmetal fixed to the base of a projectile to prevent the escape of gas forward, and serving also to rotate the shot. (*Voyle.*)

gas-service, *s.* Gas-fittings or fixtures; pipes, burners, &c., for gas.

gas-socket, *s.* The metallic socket which slips over the tip of a burner, and connects the gas-tubing therewith.

gas-stove, *s.* A stove heated by gas for cooking or warming purposes.

gas-tank, *s.* A gasometer or gasholder.

gas-tar, *s.* The tar condensed in the tubes when gas is distilled from coal; commonly called coal-tar. Of late years it has been found that the tarry products of gas manufacture are of the highest value; from these hydrocarbons many artificial fruit-essences are prepared, and they are the source of all those beautiful dyes, mauve, magenta, and others grouped under the general term of aniline colours. [ANILINE, COAL-TAR.]

gas-tight, *s.* Sufficiently tight or close to prevent the escape of gas.

gas-tongs, *s. pl.* Tongs for pinching gas-pipes, holding them while screwing joints together, or screwing gas-burners into their sockets.

gas-washer, *s.* An apparatus which receives the gas from the condenser. The office of the washer is to remove the ammonia, which affects the quality of the gas and is otherwise injurious.

gas-water, *s.* Water through which gas has been passed to purify it.

gas-works, *s. pl.* A manufactory where gas is distilled for illuminating purposes.

gas, *v.t.* & *i.* [GAS, *s.*]

A. *Transitive:*

Cotton-manuf.: To burn or singe off the divergent fibres or fluff from yarn. [GASSING.]

B. *Intrans.:* To make use of empty talk; to froth.

găs-a-liër′, *s.* [GASELIER.]

Găs′-coñ, *a.* & *s.* [Fr.]

A. *As adj.:* Of or pertaining to Gascony.

B. *As substantive:*

1. A native or inhabitant of Gascony.

2. A boaster; a gasconader.

găs-cŏn-ā′de, *s.* [Fr. *gasconnade,* from *Gascon* = an inhabitant of Gascony, a district the inhabitants of which had the reputation of being great boasters and blusterers.] A boast or boasting; bravado, bluster, vaunting, bragging.

"I tell you, without any *gasconade,* that I had rather be banished for my whole life."—*Bolingbroke: Letter to the Earl of Peterborough.*

găs-cŏn-ā′de, *v.i.* [GASCONADE, *s.*] To boast, to brag, to bluster.

găs-cŏn-ād′-ĕr, *s.* [Eng. *gasconad(e); -er.*] One who gasconades; a boaster, a bragger, a blusterer.

* **gas-coynes,** *s. pl.* [GASKINS.]

găs′-crŏmh, *s.* [Gael. *cascromh,* from *cas* = a foot, *crom* = crooked.] An instrument of a semicircular form, resembling a currier's knife, with a crooked handle fixed in the middle, used for trenching ground; properly Cascromh.

"Even the savage Highlandmen, in Caithness and Sutherland, can make more work, and better, with their *gascromh,* or whatever they call it."—*Scott: Pirate,* ch. ii.

găs-ĕ-fĭ-cā′-tion, *s.* [GASIFICATION.]

găs′-ĕ-fȳ, *v.t.* [GASIFY.]

găs-ē′-ĭ-tȳ, *s.* [Eng. *gase(ous); -ity.*] The quality or state of being gaseous; gaseousness.

găs-ĕ-liër′, găs-a-liër′, *s.* [Formed from *gas,* with a curious imitation of *chandelier* (q.v.).] A frame with brackets or branches for burning gas, or a chandelier for candles.

"Standing right under the central *gaselier.*"—*Black: Adventures of a Phaeton,* ch. iii.

gā′-ṣĕ-oŭs, *a.* [Eng. *gas; e* connect.; *-ous.*]

1. *Lit.:* Of the nature of gas; in the form of gas.

"The substance employed, whether it be fluid, *gaseous,* elastic, electrical, or none of these, or nothing resembling these, is unknown to us."—*Paley: Natural Theology,* ch. vii.

* 2. *Fig.:* Without substance or reality; unreal, flimsy, empty.

gā′-ṣĕ-oŭs-nĕss, *s.* [Eng. *gaseous; -ness.*] The quality or state of being gaseous; gaseity.

găsh (1), *v.t.* [Mid. Eng. *garse.*] [GASH, *s.*] To make a gash or deep wide gaping cut in, especially in flesh.

"*Gash* thyself, priest, and honour thy brute Baal."
Tennyson: Aylmer's Field, 644.

găsh (2), *v.i.* [Etym. doubtful.] To talk a great deal; to chatter, to prattle, to gossip.

"The couthy cracks begin when supper's o'er,
The cheering supper gars them glibly *gash.*"
Fergusson: Poems, ii. 56.

găsh (3), *v.i.* [Fr. *gauche* = awry; Ger. *gosche* = grinning or opening the mouth in scorn.]

1. To project the under jaw.

2. To distort the mouth in contempt.

găsh (1), *s.* [A corrupt. of Mid. Eng. *garse, garsshe,* or *garsh.*] [GARSE.]

1. A deep and wide cut or wound, especially in flesh.

"The uproar, the blood, the *gashes,* the ghastly figures which sank down and never rose again, spread horror and dismay through the town."—*Macaulay: Hist. Eng.,* ch. v.

* 2. A mark or scar of a wound.

"I was fond of back-sword and cudgel-play, and I now bear in my body many a black and blue *gash* and scar."—*Arbuthnot.*

găsh (2), *s.* [GASH (2), *v.*]

1. Prattle, chatter, talkativeness.

2. Pert language.

găsh (3), *s.* [Etym. doubtful.] A projection of the under jaw.

gash-gabbit, *a.*

1. Having the mouth distorted.

"A' teethless and *gash-gabbit*
The hags that night."
D. Anderson: Poems, 125.

2. Having a long projecting chin.

găsh, *a.* [Etym. doubtful. Jamieson suggests that it is an abbreviation of Lat. *sagax* = sagacious.]

1. Shrewd and intelligent in conversation; sagacious.

"Nay, never look *gash* or grim at me, man."—*Scott: Rob Roy,* ch. xxv.

3. Trim, well-dressed.

* **găsh′-fụl,** *a.* [Eng. *gash* (1), *s.*; *ful(l).*] Ghastly, hideous, frightful.]

"A *gashful,* horrid, ugly shape."—*Gayton: Festivous Notes on Don Quixote.*

* **găsh′-lĭ-nĕss,** *s.* [Eng. *gashly; -ness.*] The quality or state of being ghastly, horrid, or dismal; dismalness, ghastliness.

* **găsh′-lȳ,** *a.* [Apparently a corrupt. of *ghastly* (q.v.).] Ghastly, terrible, inspiring dread, dismal.

"By all that is hirsute and *gashly.*"—*Sterne: Tristram Shandy,* v. 215.

găs′-hōld-ĕr, *s.* [Eng. *gas,* and *holder.*] A Gasometer (q.v.).

găs-ĭ-fĭ-cā′-tion, *s.* [Eng. *gasify; c* connective; suff. *-ation.*] The art or process of converting into gas.

găs′-ĭ-fȳ, *v.t.* [Fr. *gazéifier.*] To convert into gas or an aëriform fluid, as by the application of heat, a chemical process, &c.

găs′-ĭ-form, *s.* [Fr. *gazéiform.*] Of the nature or form of gas; gaseous, aeriform.

găs′-kĕt, *s.* [Fr. *garcette* = a gasket, a cat-o'-nine tails; Sp. *garceta* = a gasket.]

1. *Naut.:* A plaited cord by which the sails, when furled, are bound close to the yards or gaffs.

2. *Steam-engin.:* A strip of leather, tow, or textile fabric, to form a packing or caulk a joint.

* **găs′-kĭñs,** *s.* [GALLIGASKINS.] Wide, loose breeches or hose.

"If one point break, the other will hold;
Or, if both break, your *gaskins* fall."
Shakesp.: Twelfth Night, i. 5.

găs′-līght (*gh* silent), *s.* [Eng. *gas,* and *light.*]

1. The light produced by the combustion of coal gas.

2. A gas-jet.

găs-līght-ĭñg (*gh* silent), *s.* [Eng. *gas,* and *lighting.*] The act or system of lighting a place or district by means of gas.

găṣ′-ô-līne, *s.* [Eng., &c., *gas;* Lat. *ol* (*eum*) = oil; *-ine.*] A light grade of petroleum.

găṣ-ŏm′-ĕ-tĕr, *s.* [Eng. *gas; o* connective; and *meter;* from Gr. *μέτρον* (*metron*) = a measure.] Etymologically an instrument for measuring amounts of gas; but for this there is already the term *gas-meter* (q.v.). A gasometer is therefore conventionally used for a reservoir of gas—a large vessel designed for the storage of gas. It is usually a large hollow cylinder filled with water, closed at the top, with the lower end immersed in water; the cylinder rises or falls according to the amount of water displaced by gas. It is a conspicuous object at a gas-works, and generally, if it explode, is capable of dealing death and destruction around.

găṣ-ô-mĕt′-rĭc, *a.* [Eng. *gas; o* connective; and *metric* (q.v.).] Of or pertaining to gasometry, or the measurement of gases.

gasometric-analysis, *s.* A mixture of gases is analysed by the Eudiometer (q.v.), or by passing the mixture of gases through a series of tubes filled with different liquids, which absorb certain of the gases, the volume of the remainder being measured and corrections made for temperature, pressure, &c. Water absorbs hydrochloric acid, hydrobromic acid, and hydriodic acid; caustic potash absorbs H_2S, HCl, CO_2, SO_2, HCN, &c.; pyrogallic acid dissolved in caustic potash absorbs oxygen; concentrated sulphuric acid and other liquids are also used. For the methods employed in gas analysis consult *Gasometrische Methoden von R. Bunsen.*

găṣ-ŏm′-ĕ-trȳ, *s.* [Eng. *gas; o* connective; and Gr. *μέτρον* (*metron*) = a measure; Fr. *gazométrie.*] The science, act, or practice of measuring gases; that branch of chemical science which treats of the nature and properties of gases.

găṣ-ŏph′-a-nĕr, *s.* [Eng. *gas,* and Gr. *φαίνω* (*phainō*) = to show.] An indicator of the presence of poisonous gases. It is described as a lump of boracic acid, heated to redness in chlorine, and blown into a bulb. Carbonic acid, sulphuretted hydrogen, and other deleterious gases, give peculiar reactions on the bulb, and indicate their presence.

găṣ′-ô-scōpe, *s.* [Eng. *gas,* and Gr. *σκοπέω* (*skopeō*) = to see.] An instrument for detecting the presence of carburetted hydrogen in the atmosphere. It is used, or should be, in coal-mines, to give an alarm when a dangerous and explosive condition of the air supervenes. It may also be applied to detect a leak in the gas-apparatus of a building. [GAS-ALARM.]

gasp, * **gaspe,** * **gasp-yn,** *v. i.* & *t.* [Icel. *geispa* = to yawn; Sw. *gäspa;* Dan. *gispe. Gasp* is a frequentative from *gape* (q.v.).]

A. *Intransitive:*

1. *Lit.:* To open the mouth wide in laborious respiration; to breathe heavily and with difficulty; to respire convulsively.

"*Gasping* to begin some speech, her eyes
Became two spouts."
Shakesp.: Winter's Tale, iii. 3.

* 2. *Fig.:* To pant eagerly; to crave earnestly.

"Or beene thine eyes attemp'red to the yeere,
Quenching the *gasping* furrowes thirst with raine?" *Spenser: Shepheards Calender; April.*

B. *Trans.:* To emit or utter with gaspings or pantings. (In this sense followed by *away, forth, out,* &c.)

"He staggers round, his eyeballs roll in death,
And with short sobs he *gasps* away his breath."
Dryden: Virgil; Æneid ix. 558.

¶ *To gasp after:* To long eagerly for; to desire vehemently.

"The Castilian and his wife *gasped after* their liberty."—*Addison: Spectator,* No. 198.

¶ For the difference between to *gasp,* and to *palpitate,* see PALPITATE.

gasp, *s.* [GASP, *v.*] The act of gasping or opening the mouth to catch the breath;

laboured or convulsive respiration; a short, painful catching of the breath.

"Egelred shortly gane
A quiet *gaspe* or twaine."
Warner: Albions England, bk. iv., ch. xxii.

¶ *At the last gasp:* On the point of death; in the last extremity.

"His fortunes all lie speechless, and his name
Is *at last gasp*." *Shakesp.: Cymbeline*, i. 6.

gasp'-ĭng, *pr. par., a., & s.* [GASP, *v.*]

A. & B. *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* A gasp; a short painful catching of the breath.

"And the foam of his *gasping* lay white on the turf,
And cold as the spray of the rock-beating surf."
Byron: Destruction of Sennacherib.

gasp'-ĭng-lȳ, *adv.* [Eng. *gasping; -ly.*] In a gasping manner; with gasps.

"My breath came *gaspingly* and thick."
Byron: Prisoner of Chillon, xi.

Găs-sĕr-ĭ-ăn, *a.* [Named after an anatomist, Gasseri (?).]

Anat.: For def. see etym. and compound.

Gasserian-ganglion, *s.*

Anat.: The ganglion of the fifth pair of cranial nerves.

găs'-sĭng, *s.* [GAS, *v.*]

Cotton-man.: The process of burning the divergent fibres or fluff from yarn. The loose filaments are burned off by passing the yarn quickly through a gas-flame. The yarn is thus prepared for thread, lace, and hosiery. An average yarn loses about one-eighteenth part in the operation.

gassing-frame, *s.*

Cotton-man.: An apparatus for gassing yarn. It has a row of jets about twelve inches apart, and a little hood above each. The yarn is led from one bobbin to a second, which is rotated by being pressed against a rotating roller. The yarn in passing between the reels traverses to and fro through the flame, passing over pulleys.

găs'-sȳ, *a.* [Eng. *gas; -y.*]

1. *Lit.:* Pertaining to or containing gases; gaseous.

2. Full of empty talk.

"As when we call an empty and sophistical but ready talker *gasny*."—*Whitney: Life & Growth of Language*, p. 17.

* **gast,** * **gaste,** *v.t.* [A.S. *gæstan* = to terrify.] To frighten, to terrify, to make aghast.

"I knowe no gome that is *gast* of they grete wordes."
Gawaine & the Grene Knight, 225.

* **gast** (1), *s.* [GHOST.]

* **gast** (2), *s.* [GAST, *v.*] A fright, a state of terror.

"The woman in a *gast*, and pale as death, comes and tells her lady who had stolen her things she missed."—*Law: Memorials*, p. 229.

* **găs'-tĕr,** *v.t.* [Eng. *gast; -er.*] To frighten.

"Either the sight of the lady has *gastered* him, or else he's drunk."—*Beaum. & Flet.: Wit at Several Weapons*, ii. 1.

găs-tĕr'-ĭ-ą *s.* [Gr. γαστήρ (*gastēr*) = the belly, alluding to the enlarged base of the flowers.]

Bot.: A genus of Liliaceæ. Paxton enumerates forty-two species, some with varieties, as introduced into Britain.

Bot.: An order of Fungals, called also Lycoperdaceæ (q.v.). The spores are generally quaternate on distinct sporophores, hymenium inclosed in a peridium. Lindley divides the order, which he calls also Lycoperdaceæ, into six sub-orders, (1) Podaxineæ, (2) Hypogæi, (3) Phalloidei, (4) Trichogastres, (5) Myxogastres, and (6) Nidulariacei.

găs-tĕr-ō-mȳ-çē'-toŭs, *a.* [Mod. Lat. *gasteromycetes* (q.v.); Eng., &c. suff. *-ous.*]

Bot.: Of, belonging, or relating to the Gasteromycetes (q.v.).

găs-tĕr-ŏph'-ĭl-ŭs, *s.* [Pref. *gastero-* (q.v.), and Gr. φιλέω (*phileō*) = to love; φίλος (*philos*) = loved; in poetry (but rarely) loving.]

Entom.: A genus of two-winged insects, family Œstridæ (Bot-flies). *Gasterophilus equi*, the larva of which at one stage of its career inhabits the stomach of the horse. The perfect insect lays its eggs on the skin of the animal, choosing situations which it can reach with its tongue when it licks itself. By this process the eggs are transferred to the stomach. When the larva is mature it is excreted, and makes its final transformation in the earth or in dung.

găs'-tĕr-ō-pŏd, *s.* [GASTEROPODA.] One of the Gasteropoda.

găs-tĕr-ŏp'-ō-dą, *s. pl.* [Pref. *gastero-* (q.v.); Gr. πούς (*pous*), genit. ποδός (*podos*) = a foot, and Lat. neut. pl. suff. *a.*]

1. *Zool.:* Gasteropods. The most typical, though not the most highly-organized class of the sub-kingdom Mollusca. Its essential character is that the under side of the body constitutes a single muscular foot, on which the animal creeps or glides. Most of the Gasteropoda have univalve shells, a few have them tubular or conical; in one the shell is multivalve, and in some it is internal or wanting. Most of the spiral shells are dextral, a few are sinistral. Some have an operculum closing the aperture of the shell. The animal has a head furnished with two, four, or six tentacles, or these are wholly wanting. There is a mantle, in the folds of which the shell is produced. Some breathe air, the others water. Cuvier divided the Gasteropoda into eight orders, (1) Pectenibranchiata, (2) Scutibranchiata, (3) Cyclobranchiata, (4) Tabulibranchiata, (5) Pulmonata, (6) Tectibranchiata, (7) Inferobranchiata, and (8) Nudibranchiata. Woodward and others have divided the class into four orders only. (1) Prosobranchiata, including the first four of Cuvier's orders, (2) Pulmonata, corresponding to his 5th, (3) Opisthobranchiata, comprehending his 6th, 7th, and 8th orders; and (4) Nucleobranchiata, which Cuvier had made a distinct class—Heteropoda (q.v.). The Prosobranchiata have been arranged in two divisions: Siphonostomata and Holostomata; and the Opisthobranchiata also in two: Tectibranchiata and Nudibranchiata.

2. *Palæont.:* Gasteropoda occur in all the formations from the Upper Cambrian rocks till now. In 1867, Mr. Robert Etheridge, F.G.S., Palæontologist to the Geological Survey of Great Britain, estimated the known Gasteropoda (excluding Pteropoda) from the Palæozoic rocks: at 96 from the Silurian, 0 from the Old Red Sandstone, 46 from the Devonian, 7 common to the Devonian and the Carboniferous, 174 from the Carboniferous beds, and 25 from the Permian. Of the Pteropoda there were 27 Silurian and 1 Devonian. (*Q. J. Geol. Soc.*, xxiii. (1867), p. 615.) The Holostomata are more abundant in the Palæozoic period, and the Siphonostomata in the Secondary and Tertiary strata. The Pulmonata, from being many of them land animals, are less fully represented: the Nudibranchiata, from the absence of the shell, not at all. Both families of the Nucleobranchiata have fossil forms.

găs-tĕr-ŏp'-ō-doŭs, *a.* [Mod. Lat. *gasteropod(a)*; Eng., &c. suff. *-ous.*]

Zool.: Using the belly or the whole underpart of the belly as a foot to crawl by; of or belonging to the Gasteropoda (q.v.).

gastric-juice, *s.*

Anat.: A colourless liquid secreted stomach, containing about 98·5 per

water; when evaporated to dryness and burnt, the ashes consist chiefly of sodium chloride. The gastric juice also contains a free acid, probably hydrochloric acid, and a peculiar substance called pepsine (q.v.), to which, and the presence of the free acid, the power of digesting food possessed by the gastric juice appears to be due. An artificial gastric juice can be formed by extracting pepsine from the coats of the stomach by means of glycerine, and adding to the filtered liquid an aqueous solution containing 0·1 per cent. of hydrochloric acid.

* 2. The pluck of an animal. (*Cotgrave.*)

II. *Vehic.:* The inclination forward of an axle journal, or spindle, usually one-tenth of its diameter. The amount of gather depends upon the amount of taper. A perfectly cylindrical spindle requires none. The inclination downward is also dependent upon the taper, and is called the swing. The latter renders the dishing of the wheel necessary, in order that each spoke as it comes to the bottom position may be vertical. If a taper spindle be made without any gather, the tendency of the wheel is to slip outward against the linchpin or nut. If the gather is in excess, the boxing of the hub rubs hard against the butting-ring of the axle.

gā′-vĭ-al, gā-vĭ-ā′-lĭs, *s.* [Hind. *ghariyal*, the *r* of which, in the handwriting of the person who first wrote home from India regarding the animal, being mistaken for *v*, the word was Englished *gavial*, with the Mod. Lat. form *gavialis.*]

I. *Of the form* gavial:

Zool.: The Gangetic Crocodile (*Gavialis gangetica*), called also the Common Gavial. It has a large cartilaginous protuberance containing the nostrils at the end of the snout. Ælian knew this. The gavial is about twenty-five feet long; it feeds chiefly on fish, and does not as a rule attack man. It is not confined to the

Ganges, but is found in some other large Indian rivers.

II. *Of the form* gavialis :

1. *Zool.* : A genus of Crocodiles (Crocodilia), sub-order Procœlia of Owen, Eusuchia of Huxley. The jaws are very long and sub-cylindrical, dilated and convex to the end; the teeth very numerous and all nearly equal in size. The hind feet are indented at the external edge, and palmated to the end of the toes. [CROCODILIA.]

2. *Palæont.* : The genus first appears in the Upper Cretaceous rocks. (*Huxley*, in *Quar. Jour. Geol. Soc.*, xxxi. (1875), 431-2.) It occurs in British Eocene rocks, with true crocodiles and alligators, though these are now restricted to particular regions, and never occur together. Gavialis is found also in the Eocene of North America, though it is now confined to Asia. (*Nicholson.*)

ga-vŏt'te, ga-vŏt', *s.* [O. Fr. *gavote*; Fr. *gavotte*; Ital. *gavotta*: originally a dance of the Gavots or people of Gap, in the department of the Upper Alps, and the old province of Dauphiné.] A dance tune of a lively yet dignified character, of French origin, in common time. The description of the dance, "a brisk round for as many as will," identifies it with the country dance, and the form of the tune supports this resemblance. The gavot seems to have been more popular as an instrumental piece than as a dance, and to have been a favourite movement in suites, lessons, and sonatas from the latter part of the seventeenth century, the time when the word appears to have been brought into use.

"The disposition in a fiddle to play tunes in preludes, sarabands, jigs, and *gavots*, are real qualities in the instrument."—*Arbuthnot.*

gâw, *s.* [Etym. doubtful.]

1. A furrow or small trench made for drawing off water.

* **gay-ler,** *s.* [GAOLER.]

gāy-lûs'-sīte, *s.* [Named after Nicolas François Gay Lussac, a celebrated chemist and physicist, who was born in 1778, and died in 1850.]

Min. : A monoclinic translucent mineral; its hardness 2 to 3; its sp. gr. 1·92 to 1·99. Compos.; carbonate of soda 34·5; carbonate of lime 33·8; water 30·3 = 100. Found in Maracaibo and in Nevada, in salt lakes. It can be produced artificially. (*Dana.*)

gāy'-nĕss, * gay-nesse, *s.* [Eng. *gay*; *-ness*.]

1. The quality or state of being gay; gaiety, fineness, finery.

"Our *gayness* and our gilt are all besmircht
With rainy marching in the painful field."
Shakesp.: Henry V., iv. 3.

*2. Choice language. (*Fairfax.*)

* **gāy'-sŏme,** *a.* [Eng. *gay*; *-some*.] Full of gaiety; gay, merry, jovial. (*Chapman.*)

gāy'-yoû, *s.* [A native name.]

Naut. : A narrow flat-bottomed fishing-boat, used in Annam, carrying two or three masts, and usually covered in the middle with a flat roof.

Găz'-a-rī, *s. pl.* [A corruption of Gr. καθαρόι (*katharoi*) (?) = pure. (*Mosheim.*)]

Ch. Hist. : A name given, especially in Italy, to the Paulicians and sects confounded with them.

gāze, * gase, *v.i.* & *t.* [Sw. dial. *gasa* = to gaze, stare, connected with *ghast* (q.v.).]

A. *Intrans.* : To fix the eye intently; to look earnestly or eagerly, as in curiosity, admiration, astonishment, or anxiety. (Followed by *at*, *on*, or *upon*, when the object is expressed.)

"Dismissed, again on open day I gazed
At houses, men, and common light, amazed."
Wordsworth: Female Vagrant.

* **B.** *Trans.* : To view steadfastly; to fix the eyes on earnestly or attentively; to stare or gaze at.

"Straight toward heaven my wondering eyes I turned,
And *gazed* awhile the ample sky."
Milton: P. L., viii. 258.

¶ For the difference between to *gaze* and to *gape*, see GAPE.

gāze, *s.* [GAZE, *v.*]

1. The act of gazing or looking intently at anything; an earnest, eager look; a look of curiosity, attention, admiration, or anxiety.

"He meanwhile shunned the public *gaze* with a haughty shyness which inflamed curiosity."—*Macaulay: Hist. Eng.*, ch. xxiii.

*2. That which is gazed at; that which causes one to gaze.

"Betrayed, captive, and both my eyes put out;
Made of mine enemies the scorn and *gaze*."
Milton: Samson Agonistes, 34.

¶ *At gaze; At a-gaze* :

*(1) *Ord. Lang.* : As one gazing or staring; gazing earnestly.

"And make the sun to stand *at gaze*,
Till he forgot his way."
Drayton: The Muses' Elysium, Nymph 1.

(2) *Her.* : Applied to an animal, as a hart, buck, stag, or hind, represented full-faced, or with the face directly to the front. [GARDANT.]

* **gāz-eē',** *s.* [Eng. *gaz(e)*; suff. *-ee*.] One who or that which is gazed at.

"Such a group would relieve both parties—gazer and gazee."—*De Quincey: Autobiog. Sketches*, i. 25.

* **ga-zē'-bō, * ga-zeē'-bō,** *s.* [GAZE, *v.*] A summer house commanding an extensive view.

* **gā'ze-fûl,** *a.* [Eng. *gaze*; *-ful(l)*.] Gazing; looking earnestly, anxiously, or intently.

"Then look, who list thy *gazefull* eyes to feed
With sight of that is fair."
Spenser: Hymn of Heavenly Beauty.

* **gā'ze-hoûnd, * gā'se-hoûnd,** *s.* [Eng. *gaze*, and *hound*.] A hound which hunts by sight, not by scent, as a greyhound.

"See'st thou the *gazehound*! how with glance severe
From the close herd he marks the destined deer."
Tickell: On Hunting.

* **gā'ze-lĕss,** *a.* [Eng. *gaze*; *-less*.] Unseeing, not looking, sightless.

"Desire lies dead upon the *gazeless* eyes."
Woolcot: P. Pindar, p. 8.

ga-zĕl'-la, *s.* [GAZELLE.]

*1. *Zool.* : A genus of Antelopes, of which the gazelle (q.v.) is the type. There are other species, as *Gazella albifrons*, the Blesbok; *G. euchore*, the Springbok; and *G. pygarga*, the Bontebok. These three are all from S. Africa.

2. *Palæont.* : The genus occurs in the Upper Miocene of Greece.

ga-zĕl'le, *s.* [Arab. *ghazál*, *ghazálah*; Fr. *gazelle*; Sp. *gazela*; Port. *gazella*; Ital. *gazzella*.]

Zool. : A kind of antelope, Gazella dorcas, formerly called Antilope dorcas. Dorcas is Latin, from Greek δορκάς (*dorkas*), which is from δέδορκα (*dedorka*), the perfect tense of δέρκομαι (*derkomai*) = to look, to see, with reference to the large bright eyes of the animal. From this characteristic, and its general gracefulness, it was sometimes used for a Greek female name, as in the case of Dorcas, who made garments for the poor (Acts ix. 36—end). The horns are rounded, thick, and black; the hair on the body light yellow on the back, while on the lower parts a broad band exists along each flank, a bunch of hair on each knee, and a deep pouch at each groin. It lives in North Africa, is gentle in character, but when a herd is attacked, it forms a circle presenting an array of horns, so as to leave no safe means to allow the assailant to break the ring of defence. Nevertheless, the gazelle is largely preyed on by the lion. It furnishes a constant theme for Arabic poetry.

ga-zĕl'-līne, *a.* [Eng. *gazell(e)*; suff. *-ine*.]

Zool. : Akin to the gazelle.

¶ Major Charles Hamilton Smith has a Gazelline group of antelopes.

* **gā'ze-měnt,** *s.* [Eng. *gaze*; *-ment.*] Gaze, view, sight.

"Then forth he brought his snowy Florimele,
Whom Trompart had in keeping there beside,
Covered from people's *gazement* with a veile."
Spenser: F. Q., V. iii. 17.

gāz'-ĕr, *s.* [Eng. *gaz(e)*; *-er.*] One who gazes; one who looks earnestly, eagerly, or anxiously at any sight; a spectator.

"Tower Hill was covered up to the chimney tops with an innumerable multitude of *gazers*."—*Macaulay: Hist. Eng.,* ch. v.

ga-zět'te, ***gazet,** *s.* [Originally an Italian word, meaning a small coin current at Venice, newspapers being first published there, and, being sold for a *gazette* coin, came to be called Gazettes.]

* 1. The above-mentioned coin.

"If you have a stool it will cost you a *gazet*, which is almost a penny."—*Coryat: Crudities,* vol. ii., p. 15.

2. A newspaper; a printed sheet, printed periodically, and containing an exact account of events of public or private interest. Specif., an official journal published in London, Dublin, and Edinburgh, containing a list of those appointed to any public office or commission, legal notices, lists of bankrupts, &c. The London *Gazette* appeared first on August 22, 1642.

"The next *gazette* mentioned that the King had pardoned him [the Duke of Monmouth] upon his confessing the late plot."—*Burnet: Own Time* (an. 1684).

¶ Johnson says that in the eighteenth century the pronunciation of the word was frequently *găz'-ĕtte*, as appears from the following lines—

"The senate's thanks, the *gazette's* pompous tale,"
Johnson: Vanity of Human Wishes. 177.
"Like the last *gazette* or the last address."
Pope: Ep. to Sat. ii. 227.

ga-zět'te, *v.t.* [GAZETTE, *s.*] To insert or publish in a gazette; to announce or publish officially: as, His promotion is *gazetted.*

găz-ĕt-teër', *s.* [Eng. *gazette*; *-er.*]

*1. A writer for a gazette; a writer of news.

"And monumental brass this record bears,
'These are—ah no! these were—the *Gazetteers*.'"
Pope: Dunciad, ii. 314.

*2. A gazette, a newspaper.

"Glasses and bottles, pipes and *gazetteers*.
Thomson: Autumn, 558.

3. A book containing descriptions and statistics of natural and political divisions—countries, cities, towns, rivers, mountains, &c. —in the whole or any portion of the world, alphabetically arranged; a geographical and topographical directory.

* **găz-ĕt-teër'-shĭp,** *s.* [Eng. *gazeteer*; *-ship.*] The office or post of a publisher or writer of news.

gāz'-ĭng, ***gas-yng,** *pr. par., a., & s.* [GAZE, *v.*]

A. & B. *As pr. par. & particip. adj.*: (See the verb).

C. *As subst.*: The act of looking earnestly, eagerly, or anxiously at anything.

"Thei be very desyrous of newe thinges, and straunge sightes, and *gasynges*."—*Hall: Henry VII.* (an. 11.).

gāz'-ĭng-stŏck, ***gaz-yng-stocke,** *s.* [Eng. *gazing*, and *-stock.*] A person gazed at with scorn or abhorrence; an object of curiosity and contempt.

"We were not onely a *gazyngstocke* to the worlde, whiche defieth Christe, . . . but also to the Deuels themselfes."—*Udal: Corinthians* iv.

găz'-ō-ġēne, *s.* [Fr. *gazogène*; from *gaz* = gas, and Gr. γεννάω (*gennaō*) = to produce.]

Mach.: An apparatus for manufacturing aërated or "soda" water. There are two glass globes, one placed above the other. There is a long funnel used to fill the lower globe with water, then a tube, running vertically through the two globes, is closed by the stopper, and bicarbonate of soda and tartaric acid are placed in the upper globe by means of a small funnel. The stopper is then withdrawn and the long tube inserted and screwed closely down. If, after remaining closed about two hours, the screw stopcock at the top be opened, the carbonated water will flow out. [SELTZOGENE.]

găz'-ō-līte, *s.* [Fr. *gaz* = gas; *o* connective, and Gr. λίθος (*lithos*) = stone.]

Min.: The same as ÆROLITE (q.v.).

găz'-ō-lȳteş, *s. pl.* [Fr. *gaz* = gas, and Gr. λυτός (*lutos*) = soluble; λύω (*luō*) = to dissolve.]

Chem.: The name given by Berzelius to those simple substances capable by their union with other simple substances of forming permanent gases. They were one of four classes of bodies into which simple substances were divided, the others being metals, metalloids, and halogens.

gaz-oṅ', *s.* [Fr., from O. H. Ger. *waso*; Ger. *wasen* = a turf.]

Fortif.: A piece of sod used as a revetment or lining for parapets and earthen banks.

* **găz-zā'-tŭm,** *s.* [Low Lat.] [GAUZE.]

Fabric: A fine species of silk, or linen stuff, like gauze.

G clef, *s.* The character placed at the beginning of a stave, to indicate the pitch of the notes. [CLEF.]

G dur, *s.* [Ger.] The key of G major.

ge-, *pref.* [A.S.] A common prefix in Anglo-Saxon. With nouns it often gives a collective sense to the word to which it is prefixed; as, *fera* = a traveller: *gefera* = a companion. To neuter verbs it often gives an active force; as, *winnan* = to fight: *gewinnan* = to win; *ridan* = to ride: *geridan* = to reach by riding. Frequently it appears to be a simple augment. It is common in past participles, appearing later as *i* or *y*, as *yclept.* It also appears now as *a* or *e*, as in *alike* = A.S. *gelic*, among = A.S. *gemang*, enough = A.S. *genog, genōh.*

* **ġēal,** ***gell-yn,** *v.i.* [Fr. *geler*; from Lat. *gelo* = to freeze.] To freeze, to congeal.

"Wer't no for houp, that darling bliss,
That cheers us wi' a fancied kiss,
Our very hearts wou'd *geal*."
Tarras: Poems, p. 19.

* **ġēal,** *s.* [GEAL, *v.*] Extreme coldness, frostiness.

gēan, *s.* [Fr. *guigne*; Sp. *guinda*; Low Lat. *guindolum*, and *guina.* According to Diez, cognate also with the following words, *gu* being replaced by *v*; Ital. *visciola*; O. H. Ger. *wihsela*; N. H. Ger. *weichsel*; Mod. Gr. βίσινον (*bisinon*). *Littré.*]

Bot.: The wild cherry, *Prunus avium*, by some botanists made a distinct species, but by Sir Joseph Hooker arranged as a sub-species of *Prunus cerasus.* It is a tree with flaccid drooping leaves, drooping peduncles, the calyx tube contracted at the top, the lobes sub-acute serrate, the petals sub-erect. Drupe black, the stone adhering to the flesh. It is believed to be wild in Britain. It occurs also on the continent of Europe, in North Africa, and in Western Asia to the Himalaya mountains. The fruit is excellent. The tree is the origin of the Morella cherry.

* **ġeant,** *s.* [GIANT.]

gëar, ***geir,** ***ger,** ***gere,** *s.* [A.S. *gearwe* = preparation, dress, ornament; *gearwian* = to prepare, fit out; *gearu* = ready; cogn. with O. Sax. *garuwi* = gear; Icel. *görvi, gjörvi*; O. H. Ger. *garawi*; M. H. Ger. *garwe* = gear; O. Sax. *garn*; O. H. Ger. *garo* = ready; Eng. *yare. Gear* is a doublet of *garb* (q.v.).]

I. *Ordinary Language*:

* 1. That which is prepared for dress, outfit or ornament; dress; ornaments.

"I fancy everybody observes me as I walk the street, and long to be in my old plain *gear* again."—*Addison: Guardian.*

† 2. Military outfit or accoutrements; arms.

"Then fond he armor and other *gere*."
Torrent of Portugal, 707.

3. The harness or furniture of domesticated animals; tackle or equipment for horses or cattle.

"[Pallas] then took her angry run
At king Eumelus, brake his *gears*."
Chapman: Homer; Iliad.

¶ In this sense it is common in the United States, and different kinds of harness are indicated by the names single gear, double-gear, lead-gear, hip-strap gear, Yankee-gear, &c.

4. Goods; property generally.

"I shall appear some harmless villager,
Whom thrift keeps up about his country *gear*."
Milton: Comus, 167.

5. Tools; implements; household necessaries.

6. Material; stuff.

"If fortune be a woman, she is a good wench for this *gear*."—*Shakesp.: Merchant of Venice,* ii. 2.

* 7. Matter; business; affair.

"I will remedy this *gear* ere long!"
Shakesp.: 2 Henry VI., iii. 1.

* 8. Manner; habits; customs.

"Wysse me fro my wylde *gerys*."
Penitential Psalms, p. 23.

* 9. Anything of no value; rubbish; trash. (*Latimer.*)

II. *Technically*:

1. *Machinery*:

(1) Furniture, rigging, tackle (jeers), apparatus, and appurtenances of an implement: *e.g.*, expansion-gear, valve-gear, pump-gear, plough-gear; the working-parts of a locomotive; the rigging of a spar or sail; the running parts of a wheeled vehicle, as the fore-gears, hind-gears, referring to the fore-axle and its wheels, the hind-axle and its wheels. To the former is attached the tongue and fore hounds, to the latter the hind hounds. Each carries its bolster. The term is also applied to other mechanical devices by which motion is transmitted; as change-gear, chain-gear, back-gear, overhead-gear: or by which parts are operated, as hoisting-gear.

(2) A cog-wheel. [GEARING.]

2. *Naut.*: A general term for the ropes, blocks, &c., belonging to any particular sail or spar: as, the mainsail *gear*, &c.

¶ (1) *Running gear*:

Naut.: Running rigging.

(2) *Pump-gear, windlass-gear*: The tackle belonging to the pumps, windlass, &c.

(3) *To throw anything out of gear*:

(*a*) *Lit.*: To disconnect gearing or couplings.

(*b*) *Fig.*: To cause anything not to work smoothly; to disturb.

"The most important body of facts with which history makes us acquainted is *thrown out of gear*."—*Miall: Bases of Belief,* pt. iv., § 14.

gear-cutter, *s.* A machine for making cog-wheels by cutting out the material between the teeth.

gear-gatherer, *s.* A money-making man. (*Scotch.*)

gear-wheel, *s.* Any cog-wheel, whether crown, spur, internal-cogged, bevel, or lantern, is a gear-wheel. The essential feature is the possession of cogs, which act upon the cogs of another wheel in the train or series to impart or transmit motion. [GEARING.]

* **gëar,** ***geir,** *v.t.* [GEAR, *s.*] To dress; to harness; to put gear on.

"That all maner of men . . . be reddy horsit and *geirit*."—*Acts James II.* (1456), ch. lxii.

* **geare,** *v.t.* [JEER, *v.*]

gëar'-ĭng, *s.* [Eng. *gear*, s.; *-ing.*]

1. *Ord. Lang.*: Harness, tackle.

2. *Mach.*: A train or series of wheels with cogs for transmitting motion; the parts in machinery by which motion is communicated. In spur-gearing the teeth are arranged round either the concave or convex surface of a cylindrical wheel in the direction of radii from the centre of the wheel, and are of equal depth throughout. In bevelled-gearing the teeth are placed upon the exterior periphery of a conical wheel in a direction converging to the apex of the cone, and the depth of the teeth gradually diminishes from the base.

gearing-chain, *s.*

Mach.: An endless chain transmitting motion from one toothed wheel to another.

gearing-rails, *s. pl.* The ladder-like rails at the side of a cart or waggon; the raves.

ġē-ark'-sụ-tīte, *s.* [Gr. γῆ (*gē*) = earth, and Eng., &c. *arksutite* (q.v.).]

Min.: A dull, white, earthy mineral, like kaolin. Compos.: Fluorine 41·18, aluminum 13·75, lime 19·25, soda 2·46, water 20·22. Occurs in Greenland with cryolite. (*Dana.*)

* **gëar'-měnt,** *s.* [Eng. *gear*; *-ment.*] Rubbish, trash.

* **gēaṣ'-ŏn, geaz-on,** ***ges-on,** ***ges-oun,** *s.* [A.S. *gǽsne* = empty, barren.] Scarce, uncommon, unusual.

"The lady, hearkning of his senseful speech,
Found nothing that he said vnmeet nor geason."
Spenser: F. Q., VI. iv. 37.

ġē-as'-tĕr, ġē-as'-trŭm, *s.* [Gr. γῆ (*gē*) = the earth, and ἀστήρ (*astēr*) = a star. So called from the stellate appearance of the species when burst and lying on the ground.]

Bot.: Earth stars. A genus of gasteromyce-

tous fungi, sub-order Trichogastres. It was formed by Micheli to include the Puffballs having astellated volva. They are small fungi, often of a brown colour, found chiefly in the South of England in pine-woods and pastures during the autumn months. *Geaster hygrometricus*, as the name implies, readily absorbs and retains moisture.

ġēat (1), *s.* [A.S. *geotan* = to pour; Low Ger. *geten.*]

Found.: The hole or channel through which molten metal descends into the mould.

* **ġēat** (2), *s.* [JET.]

gēave, *v.i.* [Etym. doubtful.] To look in an unsteady manner.

"Callant, clap the lid down on the pat; what hae they't hinging *geaving* up there for?"—*Perils of Man*, i. 55.

gê′-băńg, *s.* [A Javanese word.]

Bot.: (For def. see compound).

gebang-palm, *s.*

Bot.: *Corypha Gebanga.* It is a native of Java, where the leaves are used for thatching, plaiting, &c., and the root for diarrhœa, while a kind of sago is prepared from the interior of the trunk.

geb-bie, gab-bie, *s.* [Fr. *jabot.*] The crop or craw of a bird.

ġē′-bĭ-a, *s.* [Gr. γῆ (*gē*) = the earth, and βία (*bia*) = strength, force, power, might.]

Zool.: A genus of long-tailed decapodous Crustaceans, family Thalassinidæ. Type *Gebia stellata*, a crab about an inch and a half long found on the coasts of England.

Gē′-bĕr, *s.* [GUEBRE.]

ġĕ-car-çī′-nĭ-dæ, *s. pl.* [Mod. Lat. *gecarcin(us)*, and Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: Land Crabs. A family of short-tailed Crustaceans, containing various tropical land crabs. They live often at a distance from the sea in dry woods in burrows, which they excavate, sallying forth by night in quest of food. At a certain season they migrate in numbers to the sea to deposit their eggs.

ġĕ-car-çī′-nŭs, *s.* [Gr. γῆ (*gē*) = land, and καρκίνος (*karkinos*) = a crab.]

Zool.: Land Crab. The typical genus of the family Gecarcinidæ (q.v.).

ġĕ-çĭ-nī′-næ, *s. pl.* [Mod. Lat. *gecin(us)*, and Lat. fem. pl. adj. suff. *-inæ.*]

Ornith.: A sub-family of Picidæ (Woodpeckers), established by Mr. George R. Gray, in which the ridge of the bill is near its dorsal line. Type, Gecinus (q.v.).

ġĕ-çī′-nŭs, *s.* [Gr. γῆ (*gē*) = the earth, and κινέω (*kineō*) = to move.]

Ornith.: The typical genus of the sub-family Gecininæ (q.v.). *Gecinus (Picus) viridis* is the Green Woodpecker of Britain. [WOODPECKER.]

* **gĕck,** *s.* [Ger. *geck*; Dut. *gek* = a coxcomb, a simpleton. Cf. also A.S. *geác* = a cuckoo.] [GECK, *v.*, GAWK.]

1. A toss of the head in derision or contempt; a taunt, a gibe.

2. An object of scorn, derision, or contempt; a dupe.

"And to become the *geck* and scorn
O' the other's villany."
Shakesp.: Cymbeline, v. 4.

gĕck, *v.t.* & *i.* [Dan. *giecker* = to jest, to jeer.] [GECK, *s.*]

A. *Transitive:*

1. To deride; to laugh or sneer at.

2. To befool, to cheat, to trick.

"Hame to the Prowest it was directit;
But ye shall heir whow he was *geckit.*"
Legend: Bp. St. Androis; Poems (16th cent.), p. 336.

B. *Intrans.:* To sneer, to deride; to manifest contempt or derision.

"During our whole journey she *gecked* and scorned at my northern speech and habit."—*Scott: Antiquary*, ch. xxxiii.

gĕc′-kō, gĕk′-kō, *s.* [Fr. *gecko*; Mod. Lat. *gekko*, said to be imitated from the sound of the animal's voice.]

Zool.: The typical genus of the family Geckotidæ (q.v.). *Gecko verus* is common in India and the adjacent countries, being often seen on the walls of rooms or running up the window-panes. The spider "which taketh

GECKO.

hold with her hands, and is in king's palaces" (Prov. xxx. 28), seems to be not a genuine arachnidan, but a gecko lizard.

gĕc-kŏt′-ĭ-dæ, *s. pl.* [Eng., &c. *gecko*, *t* connective, and Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: A family of Lacertilia (Lizards), sub-order Pachyglossa. The eyes are large, the tongue not very protrusible, the teeth numerous, the toes furnished below with imbricated plates, or adhesive discs, which exude a viscous fluid. These, acting like the suckers of the domestic fly, enable the animals to walk up panes of glass or go along the ceilings of rooms. They feed on insects. There are many species in the hotter parts of both the Old and the New Worlds. Though reported venomous, they are really harmless. For *Gecko verus* see Gecko. The Croaking lizard, *Thæcadactylus lævis*, is common in the boiling-houses on estates in Jamaica.

gĕd, gĕdd, *s.* [Icel. *gedda*; Sw. *gadde*; cf. Icel. *gaddo*; A.S. *gád* = a goad.] [GOAD, *s.*]

Zool.: The pike. (*Scotch.*)

"A *gedd*, or a dish of perch now and then."—*Scott: Rob Roy*, ch. xxxvi.

gêd′-rīte, *s.* [From Gedres, in France, near which it occurs.]

Min.: A variety of Anthophyllite, with microscopic black spinels.

ġeē, jeē, *v.i.* [Prob. a variant of *go* (q.v.). Mahn refers the second and third senses to Fr. *deá*, used to turn a horse to the left, in Switzerland to the right; Arm. *día*, *diou*; Ir. *deas* = to the right hand.]

*1. To agree, to fit, to suit.

2. To go or turn to the off-side; used as a direction to horses.

3. To move faster: as a teamster cries to his horses, *gee*-up.

geër, *s.* [GEAR, *s.*]

geēse, *s. pl.* [GOOSE.]

geēst, *s.* [Low Ger. *geest*, *geestland* = dry, sandy land; O. Fris. *gést*, *géstlond*, from *gást* = barren.] Alluvial matter on the surface of land, not of recent origin.

geêz, *s.* [Arabic.] A dialect of Arabic, called also Literary Ethiopic, the ancient language of Abyssinia. It is not now a spoken language, having been superseded by the Amharic. Its literature reaches back to the fourth century.

Gĕ-hĕn′-na, *s.* [Lat. *Gehenna*; Gr. Γέεννα (*Geenna*), Γαίεννα (*Gaienna*), from Heb. גֵיא הִנֹּם (*Ge Hinnom*), the valley of Hinnom: גַּיְא (*gai*) גֵּיא (*ge*), גֵּא (*ge*), and גֵּי (*ge*) = valley, and הִנֹּם (*Hinnom*). (See def.).]

1. *Scrip. Geog.:* A valley anciently belonging to a man, Hinnom, of whom nothing is known (Josh. xviii. 6), and inherited by his son or sons, whence it is called the Valley of the Son of Hinnom (Josh. xv. 8), or of the children of Hinnom (2 Kings xxiii. 10). In Joshua it is described as lying south of Jebusi, the Jebusite capital, which afterwards became Jerusalem (xviii. 16). Here, during the later period of the Jewish kings, men made their sons and daughters pass through the fire to Molech or Moloch, the Ammonite fire-god (2 Kings xxiii. 10; 2 Chron. xxxiii. 6), or actually burnt them in the fire (2 Chron. xxviii. 3). Tophet was in it (2 Kings xxiii. 10), and a prophetic passage mentions the size and fierceness of the fires there burning for the "king" [Moloch me… king] (Isaiah xxx. 33). ġĕ-lăt′-ĭ-nāte, *v.i.* & *t.* [Eng. *gelatin(e)*; *-ate.*]

A. *Intrans.*: To become converted or concreted into a substance like jelly.

B. *Trans.*: To concrete or convert into a substance like jelly.

ġĕ-lăt-ĭ-nā′-tion, *s.* [Eng. *gelatin(e)*; *-ation.*] The act or process of converting into a substance like jelly; the state or process of becoming gelatinated.

gĕl′-a-tĭne, ġĕl-a-tĭn, *s.* & *a.* [Fr. *gélatine*; Sp., Port., & Ital. *gelatina*, from Lat. *gelatus* = frozen, pa. par. of *gelo* = to cause to freeze; *gelu* = frost, cold.] So named from the tendency which the substance has to congeal and become to a certain extent solid.

A. *As substantive*:

Chem.: *Gelatin*, $C_{75}H_{124}N_{24}O_{29}$.? Animal glutin, obtained by treating bones with dilute hydrochloric acid, which dissolves the mineral constituents of the bone, consisting of phosphates and carbonates of calcium, magnesium, &c., and leaves the bone cartilage. [OSSEIN.] This, when boiled for a long time with water, dissolves, and forms gelatine, which can be purified by dissolving in hot water and precipitating by alcohol. A pure variety is obtained from the swimming-bladder of the sturgeon, or other species of *Acipenser*. Impure gelatine, called glue, is prepared by boiling down pieces of hide, horn, hoof, cartilage, &c., with water under pressure. Pure gelatine is amorphous, transparent in thin plates, of a yellowish-white colour; it has neither taste nor smell, and is neutral to vegetable colours; it is insoluble in alcohol and in ether. In contact with cold water it swells up, and is soluble in hot water. It is not precipitated by acids, except by tannic acid, which gives a flaky precipitate, which is insoluble in water, alcohol, and ether: this reaction takes place in the formation of leather (q.v.). The aqueous solution of gelatin turns the plane of polarization to the left. Gelatin subjected to dry distillation yields methylamine, cyanide of ammonium, pyrrol, &c.; by oxidation with sulphuric acid and manganese dioxide, or with chromic acid mixture, it yields hydrocyanic acid, acids of the fatty series, benzoic aldehyde and benzoic acid, &c. Gelatine boiled with caustic potash yields glycocine and leucine. Gelatine contains about about 50 per cent. of carbon, 6·6 of hydrogen, and 18·4 of nitrogen; when pure it probably contains no sulphur. Moist gelatine exposed to the air rapidly putrefies, the liquid becoming first acid, but afterwards it gives off ammonia. Dry gelatine is unaltered by the air. Gelatine gives no precipitate with lead acetate, alum, or ferrocyanide of potassium. A mixture of gelatine with potassium dichromate becomes, when exposed to the action of light, insoluble in water.

B. *As adj.*: Composed of, or in any way connected with gelatine; gelatinous.

ġĕl-a-tĭn′-ĭ-form, *a.* [Eng. *gelatin(e)*; *i* connective; *-form.*] Having the form of gelatine; gelatinous.

ġĕm, * gemme, *s.* [O. Fr. *gemme*, from Lat. *gemma* = a bud, a gem; Ital. *gemma;* Sp. *yema;* Port. *gomo, gemma.*]

I. *Ordinary Language:*

1. A precious stone, as the diamond, ruby, emerald, &c., especially when cut and polished for ornamental purposes; a jewel.

"The shining circlets of his golden hair . . .
Instarred with *gems* and gold, bestrow the shore."
Pope: Homer; Iliad xvii. 55.

* 2. A bud. [GEMMULE.]

"From the joints of thy prolific stem
A swelling knot is raised, called a *gem*."
Denham: Of Old Age. 576.

3. Anything resembling a gem in beauty or brilliancy; as a drop of dew.

4. Anything of the greatest value, beauty, or rareness.

II. *Zool.:* The same as GEMMULE (q.v.).

¶ *Artificial gems:* Factitious stones are made of very pure, fusible, highly transparent, and dense glass, usually called paste or strass. The composition is silica, potassa, and oxide of lead, with some other ingredients at times, and metallic oxides for colouring. The beauty depends upon the clearness and the exact imitation of the natural gem, and also upon the care and skill in the cutting.

¶ Obvious compounds are *gem-adorned* (*Byron*); *gem-illumined, gem-surpassing, gem-tipt* (*Cowper*), &c.

gem-cutting, *s.* The surfaces of gems are cut into facets to increase their brilliancy. The greater the natural brilliancy, the fewer facets are required to obtain a given brilliancy.

gem-engraving, *s.* The art of engraving on gems. It is performed by small revolving wheels or points charged with diamond dust, emery, &c., according to the hardness of the gem. It is also called Gem-sculpture, or Lithoglyptics (q.v.). [CAMEO, INTAGLIO.]

gem-sculpture, *s.* The same as GEM-ENGRAVING (q.v.).

* **ġĕm,** *v.t. & i.* [GEM, *s.*]

A. *Transitive:*

1. To adorn with gems, jewels, or precious stones.

2. To bespangle or adorn, as with gems.

"In the vase mysterious fling
Pinks and roses *gemm'd* with dew."
Jones: Muse Recalled.

3. To put forth in buds.

"Rose, as in dance, the stately trees, and spread
Their branches, hung with copious fruit, or *gemmed*
Their blossoms." *Milton: P. L.,* vii. 325.

B. *Intrans.:* To put forth the first buds.

Gĕ-ma'-rạ, *s.* [Aramæan גְּמָרָא (*gemara*), which according to Buxtorf is = supplement or complement, but according to Dr. Samuel Davidson is = doctrine, being derived from גְּמַר (*gemar*) = to learn.]

Hebrew Literature: One of the two leading portions of the Talmud, which is divided into the Mishna or Text, and the Gemara or Commentary. [TALMUD.]

* **gĕ-mar'-ĭc,** *a.* [Eng. *gemar(a); -ic.*] Of or pertaining to the Gemara.

ġĕm'-ĕl, *s.* [Lat. *gemellus* = twin, paired; Sp. *gemilo;* Ital. *gemello;* O. Fr. *gemeau.*]

* **I.** *Ordinary Language:*

1. One of twins.

"*Gemels* apereden in the wombe."—*Wycliffe: Genesis* xxxviii. 27.

2. A hinge. [GEMEL-HINGE.]

"A stone-wrought door of no meane weight:
Yet from itselfe the *gemels* beaten so
That little strength could thrust it to and fro."
Browne: Britannia's Pastorals, bk. ii., s. 2.

II. *Her.:* A term applied to two bars or barralets, placed parallel to each other.

"Two *gemels*, silver, between two griffins passant. —*Strype: Life of Smith,* ch. i., note *a.*

gemel-hinge, *s.*

Locksmith.: A hinge consisting of an eye or loop and a hook.

gemel-ring, *s.* A ring with two or more links; a gimbal.

gemel-window, *s.*

Arch.: A window with two bays.

ġĕm-ĕl-lär'-ĭ-ạ, *s.* [Lat. *gemellaria, gemellar* = a vessel for holding oil.]

Zool.: The typical genus of the family Gemellariadæ (q.v.). The cells are joined back to back, all the pairs facing the same way.

ġĕm-ĕl-lär-ĭ'-ạ-dæ, *s. pl.* [Mod. Lat. *gemellar(ia)*, and Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: A family of infundibulate polyzoa, sub-order Cheilostomata. It was founded by Prof. Busk. The cells are opposite in pairs, the polyzoary continuous.

ġĕ-mĕl'-lī, *s. pl.* [GEMELLUS.]

* **ġĕm-ĕl-lĭp'-ạ-roŭs,** *a.* [Lat. *gemellus* = twin, and *pario* = to bring forth.] Bearing or producing twins.

ġĕ-mĕl'-lŭs (pl. **ġĕ-mĕl'-lī**), *s.* [Lat. = twin.]

Anat.: One of two small twin muscles in the thigh. There is a *gemellus superior* and a *gemellus inferior.*

* **ġĕm'-ĕnt,** *a.* [Lat. *gemens*, pr. par. of *gemo* = to groan.] Groaning. (*Blount.*)

* **ġĕm'-ĭn-ạl,** *s.* [Lat. *geminus* = twin-born.] A pair, a doublet.

"The often harmony thereof softened the verse more than the majesty of the subject would permit, unless they had all been *geminals* or couplets."—*Drayton: Barons' Wars.* (Pref.)

* **ġĕm'-ĭ-nāte,** *a.* [Lat. *geminatus*, pa. par. of *gemino* = to double; *geminus* = twin-born.]

Bot.: United or collected in pairs.

geminate-flowers, *s. pl.*

Bot.: Twin flowers; flowers produced in pairs.

geminate-leaves, *s. pl.*

Bot.: Leaves arranged in pairs; leaves springing from the same node, but not opposite to each other.

* **ġĕm'-ĭ-nāte,** *v.t.* [Fr. *géminer*; Ital. *geminare;* Sp. *geminer.*] [GEMINATE, *a.*] To double.

"W is but the v *geminated* in the full sound."—*Ben Jonson: English Grammar.*

* **ġĕm-ĭ-nā'-tion,** *s.* [Lat. *geminatio*, from *geminatus*, pa. par. of *gemino* = to double.]

1. The act of doubling; duplication.

"They admit a *gemination* of principal parts."—*Browne: Vulgar Errours,* bk. iii., ch. xv.

2. Duplication; reduplication; an increasing twofold.

"If the evill be in the sense and in the conscience both, there is a *gemination* of it."—*Bacon: Colours of Good & Evil,* § 5.

ġĕm'-ĭ-nī, *s. pl.* [Masc. pl. of Lat. *geminus* = twin, produced at the same birth with another.]

Astron.: The third of the zodiacal constellations [♊]. The name is given from two conspicuous stars, α and β Geminorum, the former named after the example of the Greeks Castor; the latter, Pollux. If an imaginary line be drawn through the belt of Orion and two bright stars in the line of the belt, it will nearly pass through Gemini. If again Regulus and Aldebaran be above the horizon, and the space between them be equally divided, the point of bisection will be in Gemini. Castor is a remarkable binary star of the first magnitude, Pollux is of the second. The sun enters the third sign of the zodiac which is different from the actual constellation about May 21, and passes from it to Cancer about June 21.

¶ *Gemini* (*geminy, jiminy*) is used as a kind of mild oath or interjection; but in this case the word is, according to Mr. Palmer (*Folk-Etymology*), identical with Ger. *O Gemine;* Dut. *Jemy, Jemini*, which are shortened forms of Lat. *O Jesu Domine*, or perhaps merely from *Jesu meus;* Ital. *Giesu mio.*

ġĕm-ĭ-nĭf-lŏ-roŭs, *a.* [Lat. *geminus* = twin, double; *flos* (genit. *floris*) = a flower; Eng. adj. suff. *-ous.*]

Bot.: Twin-flowered; having two flowers growing together.

* **ġĕm'-ĭn-oŭs,** *a.* [Lat. *geminus* = twin.] Double; in pairs; twin.

"Christians have baptized these *geminous* births and double connascencies, with several names, as conceiving in them a distinction of souls."—*Browne: Vulgar Errours,* bk. iii., ch. xv.

* **ġĕm'-ĭ-nỹ,** *s.* [GEMINI.] A pair, a [illegible] a couple.

"I have grated upon my good friends for [illegible] prieves for you, and your [illegible] you had looked through the grate, like a [illegible] baboons."—*Shakesp.: Merry Wives of Windsor.*

ġĕm-ĭ-tōr'-ēs, *s.* [Lat. *gemitus* = a [illegible] groan; from *gemo* = to sigh, to groan. [illegible] name is not a good one. *Gemis* does not [illegible] to coo, and the cheerful love-song of [illegible] pigeons is neither a sigh nor a groan.]

Ornith.: Cooers. The same as the sub-[illegible] Columbacei (q.v.). It contains the pigeons.

ġem'-mạ (pl. **ġĕm'-mæ**), *s.* [Lat. = [illegible] eye, or gem of a plant.]

I. *Botany:*

1. The name given by Linnæus to a [illegible] bud, as distinguished from the flower-bud [illegible] a plant.

2. (*Pl.*): Minute green bodies in the [illegible] tulæ or open cups which constitute the [illegible] fication of Marchantia. They occur also [illegible] some Mosses and Hepaticæ.

II. *Zool.* (*Pl.*): The buds produced by [illegible] animal, whether detached or not.

* **ġĕm-mā'-çĕ-oŭs** (or **ceous** as **shus**) [Lat. *gemma;* Eng. adj. suff. *-ous.*] [illegible] taining to gems or leaf-buds; of the nature [illegible] or resembling gems.

ġĕm'-mæ, *s. pl.* [GEMMA.]

ġem'-mạn, *s.* [A vulgar contraction [illegible] *gentleman* (q.v.).] A gentleman. (Vulgar.)

"At home, our Bow-street *gemmen* keep the [illegible]
And here a sentry stands within your [illegible]"
Byron: Beppo.

* **ġĕm'-mạ-rỹ,** *a.* & *s.* [Eng. *gem; -ary.*]

A. *As adj.:* Pertaining to gems or jewels.

"The principle and *gemmary* affection is [illegible] lucency."—*Browne: Vulgar Errours,* bk. ii., ch. [illegible]

B. *As substantive:*

1. A depository for gems; a jewel-[illegible] (*Blount.*)

2. A knowledge of gems.

"In painting and *gemmary* Fortunio was a [illegible] —*E. A. Poe: Cask of Amontillado.*

ġĕm'-māte, *a.* [Lat. *gemmatus*, from *gemma* = a gem.]

Bot.: Having buds.

* **ġĕm'-māt-ĕd,** *a.* [Lat. *gemmatus*] Adorned or set with gems or jewels.

ġĕm-mā'-tion, *s.* [Lat. *gemmatus* = (1) [illegible] ing gems, (2) bearing buds, from *gemma* [illegible] gem, a bud; Fr. *gemmation.*]

1. *Botany:*

(1) The act of budding; specif. the [illegible] tion of buds in the axils of the floral [illegible] the former developing into new flowers [illegible] florescences. This is seen occasionally [illegible] Scabiosa and Dipsacus.

(2) The manner in which young leaves [illegible] folded up in a bud before it opens; vernation.

† (3) The time when buds come forth.

2. *Zool.:* Generation by the development [illegible] buds, which in some species, as Cha[illegible] grows out of the forepart of the body, [illegible] others, as Vorticella, from the hind part [illegible] the stem, or from the stem itself, from [illegible] the young animal soon detaches itself. [illegible] Nicholson considers that the simplest [illegible] gemmation is seen in the power possessed [illegible] crustacean to replace a lost limb. A[illegible] form of it is when a foraminifer, consisting of a little sphere of sarcode, develops a s[illegible] one like the first, than a third one like [illegible] second, till quite a group of these little [illegible] has been formed, after which the whole [illegible] surrounded by a complex shell. A[illegible] kind of it is seen in the Flustra, in which [illegible] single polypide, by developing a series of [illegible] which remain in contact with the parent [illegible] finally makes the complex sea mat, which [illegible] unobservant mistake for an algal. T[illegible] called continuous gemmation. When, as [illegible] case of the fresh-water Hydra, the new [illegible] developed from buds become discon[illegible] from their parents, and set up a separate [illegible] istence, the phenomenon is called discontinuous gemmation. Finally when the young [illegible] viduals remain within the body of the [illegible] till that parent dies, this is termed [illegible] gemmation. It occurs in some p[illegible] (*Nicholson.*)

ġĕm'-mĕls, *s. pl.* [GEMEL.] A pair of [illegible]

ġĕm´-mĕ-oŭs, *a.* [Lat. *gemmeus,* from *gemma* = a gem, a bud.]

gendarme (as **zhaṅ-darm´**), *s.* [Fr.]

1. *Lit.:* One of the armed police of France. They are divided into horse and foot gendarmes. They are all picked men, and are usually selected from the military forces for their courage and good character. They are divided into brigades, and a number of brigades form a departmental company.

"When the Peers withdrew, it seems the proofs about his design of raising the North, or the city, or of the killing the *gendarmes,* did not satisfy them."—*Burnet: Hist. of the Reformation* (an. 1551).

¶ The *gens-d'armes* were originally the king's horse-guards only, but afterwards the king's *gardes-du-corps;* the musketeers and light-horse were reckoned among them. There was also a company of gentlemen (in number about 250) bearing this name.

2. *Fig.:* (See extract).

"Pollinger and his followers were nearly brought to a standstill by one of those projecting pieces of rock which are called *gendarmes:* apparently from their frequently stopping travellers."—*Saturday Review,* Feb. 17, 1883, p. 208.

ġĕn-da-rŭs´-sĕ-æ, *s. pl.* [Mod. Lat. *gendarus(a),* and Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: A tribe or section of Acanthaceæ.

* **gende,** *a.* [GENT, *a.*]

ġĕn´-dĕr (1), * **gen-dre,** * **gen-er,** * **gen-dyr,** *s.* [Fr. *genre,* from Lat. *genere,* ablat. sing. of *genus* = a kind, a kin; Ital. *genere* = kind; Sp. & Port. *genero.*]

I. *Ordinary Language:*

* 1. A kind, a sort, a class.

"Our bodies are our gardens . . . if we will supply it with one *gender* of herbs, or distract it with many, the power or corrigible authority of this lies in our will."—*Shakesp.: Othello,* i. 3.

* 2. A class or rank of people.

"Why, to a public count I might not go,
Is, the great love the general *gender* bear him."
Shakesp.: Hamlet, iv. 7.

* 3. A sex.

4. In the same sense as II.

II. *Gram.:* One of those classes or categories into which words are divided according to the sex, natural or figurative, of the objects which they represent; a class of words distinguished by similarity of ending, such ending marking a distinction in sex, as seen in adjectives, nouns, participles, &c.; a grammatical category in which words of a similar ending are classed together. In English, words denoting males are said to be of the masculine gender, those denoting females of the feminine gender, and those denoting things of no sex of the neuter gender. Grammatical gender is that which is marked by different terminations, as *dominus* (m.), *domina* (f.). Grammatical gender existed in Anglo-Saxon, but went out of use gradually after the Norman Conquest.

"*Gender* is a grammatical distinction, and applies to words only. Sex is a natural distinction, and applies to living objects."—*Morris: Outlines of English Accidence,* § 66.

¶ Crabb thus discriminates between *gender* and *sex:* "*Gender* signifies properly a *genus* or kind; *sex* signifies the habit or nature. The *gender* is that distinction in words which marks the distinction of *sex* in things: there are, therefore, three *genders,* but only two *sexes.* By the inflections of words is denoted whether things are of this or that *sex,* or of no *sex.* The *genders,* therefore, are divided in grammar into masculine, feminine, and neuter; and things are divided into male and female *sex.*" (*Crabb: Eng. Synon.*)

ġĕn´-dĕr (2), *s.* [Etym. doubtful.]

Music: A Javanese musical instrument, introduced into England by Sir Stamford Raffles. It consists of a row of parallel metallic plates supported horizontally by two strings passed through the respective nodal lines of the plates. Underneath each plate is an upright bamboo, containing a column of air of such a height as to reciprocate the sound of the plate above.

***ğĕn′-ĕr-ale** (2), *s.* [Fr.]

Milit.: Formerly a beat of drum for the assembly of all the troops preparatory to a march or to going into action. When beaten unexpectedly it was the signal for the whole of the troops to assemble at the alarm-posts. (*Voyle.*)

"Hurrah, boys! the morning of battle has come,
And the *generale* 's beating on many a drum."
Davis: Battle-Eve of the Brigade.

***ğĕn′-ĕr-al-ĕss,** *s.* [Eng. *general; -ess.*] A female general or commander.

"He hastily nominates *generalesses.*"—*Carlyle: French Revolution*, pt. i., bk. vii., § 5.

***ğĕn′-ĕr-al-ĭsm,** *s.* [Eng. *general; -ism.*]

1. A general conclusion.

2. A platitude.

"He began with *generalisms* about humility."—*Burton: City of the Saints*, ch. v

ğĕn-ĕr-al-ĭs′-sĭ-mō, *s.* [Ital. & Sp.; Fr. *généralissime.*] A commander-in-chief; the chief commander of an army consisting of two or more grand divisions under separate generals. The term is not now in use in the British army.

"In case of any foreign invasion, the King was by law to be *generalissimo*, to command the people for their own safety."—*Ludlow: Memoirs; King Charles's Case.*

ğĕn-ĕr-ăl′-ĭ-tў, *gen-er-al-i-tie, *s.* [Fr. *généralité*, from Lat. *generalitas*, from *generalis* = general; Sp. *generalidad;* Ital. *generalità.*]

*1. The state of being general; the quality of including species or particulars.

"*Generalité. Generality*, generallnesa."—*Cotgrave.*

2. A general statement; a statement which is not specific, but applies to a whole class taken collectively; a statement which is not confined to any one particular case.

"To conclude under one consideration a specialtie and a *generalitie.*"—*Bp. Gardner: Of the Presence of the Sacrament*, fo. 58.

3. The main body; the bulk; the greatest part; the majority.

"The *generality* of men are prone to approve the laws and rules directing to justice, sincerity, and beneficence."—*Barrow*, vol. ii., ser. 7.

*4. (*Pl.*): General affairs; the interests of the general public.

*5. A district governed by a general.

ğĕn′-ĕr-al-īz-a-ble, *a.* [Eng. *generaliz(e); -able.*] That may or can be generalized or reduced under a general rule, or referred to a particular class or genus.

"Extreme cases are, *ipso nomine*, not *generalizable.*" —*Coleridge.* (*Webster.*)

ğĕn-ĕr-al-īz-ā′-tion, ğĕn-ĕr-al-īs-ā′-tion, *s.* [Fr. *généralisation;* Sp. *generalizacion.*] [GENERALIZE.]

1. The act or process of generalizing; the act of making general, or of bringing several objects agreeing in some point under a common or general name, head, or class; an extending from particulars to generals.

"This has led some philosophers to suppose that another faculty besides abstraction, to which they have given the name of *generalisation*, is necessary to account for the formation of genera and species."—*Stewart: On the Human Mind*, pt. iv., § 1.

2. A general inference.

ğĕn′-ĕr-al-īze, *v.t.* & *i.* [Fr. *généraliser;* Sp. *generalizar*, from Lat. *generalis*=general(q.v.).]

A. *Transitive:*

1. To reduce to or arrange in a genus; to view in relation to a genus or genera; to bring, as a particular fact or series of facts, into relation with a wider circle of facts.

"The mind, therefore, makes its utmost endeavours to *generalize* its ideas, begins early with such as are most familiar, comes in time to those that are less so." —*Bolingbroke: Essay on Human Knowledge*, § 5.

2. To deduce or infer as a general principle from many particulars.

"A mere conclusion, *generalized* from a multitude of facts."—*Coleridge.* (*Webster.*)

B. *Intrans.:* To employ oneself in generalization; to generalize objects.

ğĕn′-ĕr-al-lў, *gen-er-al-i, *gen-er-al-liche, *gen-er-al-lye, *adv.* [Eng. *general; -ly.*]

1. In general; without specification or exact limitation.

"*Generally* we would not have those who read this work of *Sylva Sylvarum*, account it strange that we have set down particulars untried."—*Bacon: Sylva Sylvarum.* (Pref.)

2. Collectively; in a body; not partially or severally, but universally.

"I counsel that all Israel be *generally* gathered unto thee."—*2 Samuel* xvii. 11.

3. In the main; in general; for the most or greatest part; mainly, principally.

"Look, when you will, into sessions-papers, and other accounts of bad people, who have suffered for their crimes, and you will *generally* find they began by neglecting the sabbath."—*Gilpin: Works*, vol. ii., ser. 30.

4. In the main; without minute detail.

"Those who are driven into the fold are, *generally* speaking, rather made hypocrites than converts."—*Dryden: Hind & Panther.* (Pref.)

5. Ordinarily, commonly, usually.

¶ For the difference between *generally* and *commonly*, see COMMONLY.

***ğĕn′-ĕr-al-nĕss,** *s.* [Eng. *general; -ness.*]

1. The quality or state of being general; wide extent, though short of universality.

"They had, with a general consent, rather springing by the *generalness* of the cause than of any artificial practice, set themselves in arms."—*Sidney.*

2. Commonness, frequency, usualness.

ğĕn′-ĕr-al-shĭp, *s.* [Eng. *general; -ship.*]

1. The office or rank of a general; command as a general.

"Thus those fifteen hundred horse which marched northward, within very few days were brought to nothing; and the *generalship* of the Lord Digby to an end."—*Clarendon: Civil War*, ii. 718.

2. A title of respect addressed to a general.

"Your *generalship* puts me in mind of Prince Eugene when he fought the Turks at the battle of Belgrade."—*Goldsmith: She Stoops to Conquer*, ii.

3. The skill of a general; military skill exhibited in the management of troops and the conduct of war; strategical skill.

"Cicero laughs, in one of his letters, at his *generalship.*"—*Bolingbroke: Letters on History.*

4. The discharge of the functions of a general.

5. Judicious or skilful tactics or management generally.

***ğĕn′-ĕr-al-tў,** *s.* [Eng. *general; -ty.*] The whole; the totality.

"The municipal laws of this kingdom are of a vast extent, and include in their *generalty* all those several laws which are allowed as the rule of justice and judicial proceedings."—*Hale: Prim. Orig. of Mankind.*

ğĕn′-ĕr-ant, *a.* & *s.* [Lat. *generans*, pr. par. of *genero* = to beget, to gender (q.v.).]

A. *As adjective:*

*I. *Ord. Lang.:* Begetting, producing, generative.

"In such pretended generations the *generant* or active principle is supposed to be the sun, which, being an inanimate body, cannot act otherwise than by his heat."—*Ray: On the Creation*, pt. ii.

II. *Math.:* Acting as a generant (q.v.).

B. *As substantive:*

I. *Ord. Lang.:* That which generates, begets, or produces; the generative principle or power.

"Some believe the soul made by God, some by angels, and some by the *generant.*"—*Glanvill: Scepsis Scientifica*, ch. iii.

II. *Math.:* That which by its motion generates or is conceived as generating a line, figure, or solid body; thus, a circle revolving about its diameter as an axis is the *generant* of a sphere. [GENERATION.]

ğĕn′-ĕr-āte, *v.t.* & *i.* [Lat. *generatus*, pa. par. of *genero* = to produce; *genus* (genit. *generis*) = a race, offspring.]

A. *Transitive:*

I. *Ordinary Language:*

1. To beget, to propagate, to procreate.

2. To produce or bring into life; to give existence to.

3. To cause to be; to produce. (Of material things.)

4. To cause, to produce; to give origin or rise to. (Of immaterial things.)

"Yet we ought to remember that it is the nature of injustice to *generate* injustice."—*Macaulay: Hist. Eng.*, ch. xvi.

II. *Math.:* To trace out or form as a line, figure, or solid body by the motion of a point or a magnitude of inferior order.

"If a mathematical surface be moved according to a mathematical law, the volume swept over by it, in its motion, is said to be *generated* by it, and is a mathematical solid or volume."—*Davies & Peck: Mathem. Dictionary.*

***B.** *Intrans.:* To beget, propagate, or procreate.

"Those creatures which being wild *generate* seldom, being tame, *generate* often."—*Bacon.*

ğĕn′-ĕr-āt-ĭng, *pr. par., a., & s.* [GENERATE, *v.*]

A. & B. *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* The act or process of begetting, producing, or originating.

generating-function, *s.*

Math.: A term used by Laplace, in solving equations of differences, to denote any function of x considered with reference to the coefficients of its expansion in powers of x.

generating-line, or **figure,** *s.*

Math.: A line or figure by the motion of which a figure or solid is conceived to be generated or described.

generating-surface, *s.* The heating surface of a boiler; that on which heat is applied to generate steam.

ğĕn-ĕr-ā′-tion, *gen-er-a-cioun, *gen-er-a-cyon, *s.* [Fr. *génération*, from Lat. *generatio*, from *generatus*, pa. par. of *genero* = to generate; Sp. *generacion;* Ital. *generazione;* Port. *geração.*]

I. *Ordinary Language:*

1. The act of begetting, procreating or producing.

"So fertile be the flouds in *generation.*"
Spenser: F. Q., IV. xii. 1.

*2. The act of producing, causing or giving rise or existence to.

"Seals make excellent impressions: and so it may be thought of sounds in their first *generation.*"—*Bacon.*

*3. Progeny; offspring; issue.

"The barbarous Scythian,
Or he that makes his *generation* messes
To gorge his appetite, shall to my bosom
Be as well neighboured." *Shakesp.: Lear*, i. 1.

4. A single succession or step in natural descent, as the children of the same parents; an age or period between one succession and another.

"Four *generations* of Stuarts had waged a war to the death with four *generations* of Puritans."—*Macaulay: Hist. Eng.*, ch. vii.

5. The people of the same period or age; those living at the same time.

"O faithless and perverse *generation*, who hath warned you to flee from the wrath to come?"—*Luke* ix. 41.

*6. A family; a race.

"Thy mother's of my *generation.*"
Shakesp.: Timon of Athens, i. 1.

*7. A pedigree, lineage, or descent.

"Thus from the fact of Lot, we derive the *generation* of Ruth, and blessed Nativity of our Saviour."—*Browne: Vulgar Errours*, bk. v., ch. xxi.

*8. An age.

"Every where throughout all *generations* and ages of the Christian world, no church ever perceived the word of God to be against it."—*Hooker: Eccles. Polity.*

II. *Technically:*

1. *Math.:* The formation of any magnitude by the motion of a point, or a magnitude of an inferior order. Thus, if a point move in accordance with any mathematical law, the path which it traces out is said to be generated by the point, and is a mathematical line. If a mathematical line be moved in accordance with a mathematical law, the surface in which it is always found is said to be generated by the line, and is always a mathematical surface. The moving point or magnitude is called the generatrix, and the law according to which the motion takes place is called the law of generation. (*Davies & Peck.*)

2. *Phys. Anat.:* The function which has for its object the propagation of the species, generation, presents many points of resemblance in plants and animals. In the former it is cryptogamic, or phanerogamic; in the latter non-sexual or sexual. In the cryptogamic and non-sexual generation, the new individual is developed by a separation of particles from the body of the parent, by which the new formation is nourished until it has so far matured as to be capable of an independent existence. (*Todd & Bowman: Phys. Anat.*, vol. i., introd. p. 25.)

¶ (1) *Alternation of generation, alternate generation.*]

Biol.: [ALTERNATION].

(2) *Equivocal*, or *Spontaneous generation:*

Biol.: The view that some of the lower animals or plants, or the primordial form of one or other, or both of the animal and vegetable kingdoms may have sprung from lifeless matter without the intervention of any previously existing parent. Alleged instances of such equivocal generation were shown to be unfounded, but essentially the same view has been revived as an hypothesis by Hæckel and some evolutionists. It is called by Huxley abiogenesis (q.v.). For other kinds of generation, see Fissiparous, Gemmiparous, Larviparous, Oviparous, Pupiparous, and Viviparous.

¶ Crabb thus discriminates between *generation* and *age*: "Those who are born at the same time constitute a *generation*; that period of time which comprehends the *age* of man is the *age*; there may therefore be many *generations* spring up in the course of an *age*; a fresh *generation* is springing up every day, which in the course of an *age* pass away, and are succeeded by fresh *generations*." (*Crabb: Eng. Synon.*)

¶ For the difference between *generation* and *race*, see RACE.

ġĕn′-ĕr-ā-tĭve, *a.* [Fr. *génératif*, from Lat. *generatus*, pa. par. of *genero* = to generate; Sp., Port., & Ital. *generativo*.]

1. Having the power or property of generating, procreating, or producing; pertaining to generation or production.

"They haue the seed of regeneration by the ministerie of the church, which vseth to that end and purpose not onely the word, but the sacraments, both hauing *generatiue* force and vertue."—*Hooker: Eccles. Polity*, bk. v., § 50.

2. Prolific; fruitful.

generative-tissue, *s.*

Bot.: The same as FORMATIVE-TISSUE (q.v.).

ġĕn′-ĕr-ā-tŏr, *s.* [Lat., from *generatus*, pa. par. of *genero* = to generate; Fr. *générateur*; Ital. *generatore*.]

I. *Ord. Lang.:* One who or that which begets, generates, produces, or propagates; a propagator or procreator.

"Imagination assimilates the idea of the *generator* into the reality in the thing engendered."—*Browne: Vulgar Errours.*

II. *Technically:*

1. *Aërated Water:* An apparatus for generating carbonic-acid gas for charging soda-fountains, or bottles with aërated water.

2. *Chem.:* A term used to denote the elements or compounds from which a more complex substance is obtained. Thus ethyl, alcohol, and acetic acid are the generators of acetic ether; and benzoic acid and glycocoll are the generators of hippuric acid. By the action of acids or alkalies these substances can be resolved into their generators, and so the constitution of a complex body can be determined; thus, Lecithin, a constituent of the brain, has the formula $C_{44}H_{90}N{\cdot}P{\cdot}O_9$; it has six generators, glycerin, phosphoric acid, stearic acid, glycol, methyl alcohol, and ammonia; therefore it is found to be a distearate glycerophosphate of choline, and choline has been found to be a trimethyl oxyethyl ammonium hydrate $(CH_3)_3N{\cdot}CH_2{\cdot}OH{\cdot}CH_2{\cdot}OH$.

3. *Distill.:* A retort in which volatile hydrocarbons are distilled from liquid or solid matters.

4. *Music:* A ground note, fundamental bass, root, derivative. The principal sound or sounds by which others are produced, as the lower c for the treble of the harpsichord, which beside its octave will strike an attentive ear with its twelfth above or G in alt, and with its fifteenth above or c in alt.

5. *Steam:* A vessel in which steam is generated from water, for use in a steam-engine, a heating apparatus, &c. The term was first applied to the Perkins steam-boiler, in which water in small quantity was heated to a high temperature. It is now specifically applied to a class of instantaneous generators. The name is now rapidly coming into use for all apparatus for generating steam, being held to be more correct than the usual term. [STEAM-BOILER.]

ġĕn′-ĕr-a-trĭx, *s.* [Lat.]

Math.: A point, line, or figure which by its motion generates a line, figure, or solid.

ġĕ-nĕr′-ĭc, *a.* [Lat. *gener(is)* (genit. of *genus*) = a class, a kind; Eng. adj. suff. *-ic*; Fr. *générique*; Ital. & Sp. *generico*.]

1. Pertaining to a genus, class, or kind; comprehending the genus as distinct from the species or from another genus: as, a *generic* description, that is, the description of a genus; a *generic* difference, a difference in genus; a *generic* name, a denomination which comprehends all the species belonging to a particular genus, as of animals, plants, &c.; thus Felis is the *generic* name of animals of the cat kind, Canis of those of the dog kind, &c.

"Though wine differs from other liquids, in that it is the juice of a certain fruit; yet this is but a general or *generick* difference."—*Watts: Logick.*

2. Very wide, comprehensive, or extensive; pertaining to large or comprehensive classes.

"This is a *generic* term, applicable to every sort of mental enjoyment indiscriminately."—*Cogan: On the Passions*, vol. ii., dis. iii., ch. i.

generic-area, *s.*

Bot., Zool., & Geog.: An area to which a genus is limited. When there is one spot within this area where representatives of the genus abound more than they do in other parts of it, this is called its metropolis.

* **ġĕ-nĕr′-ĭc-al,** *a.* [Lat. *gener(is)*, genit. of *genus* = a kind; Eng. adj. suff. *-ical*.] The same as GENERIC (q.v.).

ġĕ-nĕr′-ĭc-al-lȳ, *adv.* [Eng. *generical*; *-ly*.] With regard to genus or generic characteristics.

"They are of the very specific gravity with those to which they are so *generically* allied."—*Woodward.*

ġĕ-nĕr′-ĭc-al-nĕss, *s.* [Eng. *generical*; *-ness*.] The quality or state of being generical.

"The question in dispute has no relation to the *genericalness* of the objects on which we think, but to the *genericalness* of thinking itself."—*Answer to Clarke's Third Defence.*

* **ġĕ-nĕr-ĭf-ĭ-cā′-tion,** *s.* [Lat. *genus* (genit. *generis*) = a kind, a class, and *facio* = to make.] The act of generalizing; generalization.

ġĕn-ĕr-ŏs′-ĭ-tȳ, *s.* [Fr. *générosité*, from Lat. *generositas*, from *generosus* = of noble birth; *genus* (genit. *generis*) = race, family; Sp. *generosidad*; Ital. *generosità*.] [GENEROUS.]

* 1. Illustrious; of noble descent or birth.

"Their eyes are commonly black and small, noses little, nails almost as long as their fingers, but serving to distinguish their *generosity*."—*Harris: Voyages*, vol. i., p. 465.

2. *In the ethical sense:* That nobility of character which was once supposed to go with nobility of descent, but which is now known not to depend on birth, but to be present in certain individuals in all ranks of society, and absent from others of the high as well as the low.

"*Generosity* is the part of a soul raised above the vulgar. There is in it something of what we admire in heroes, and praise with a degree of rapture."—*Goldsmith: The Bee*, No. 3.

3. Liberality, munificence.

ġĕn′-ĕr-oŭs, *a.* [Fr. *généreux*, from Lat. *generosus*, from *genus* (genit. *generis*) = race, family; Sp., Port., & Ital. *generoso*.]

* 1. Of illustrious or noble birth, descent, or extraction; nobly-born.

"The *generous* and gravest citizens
Have hent the gates."
Shakesp.: Measure for Measure, iv. 6.

2. Noble, honourable, magnanimous; high-minded. (*Of persons.*)

"All men affect to seem *generous*, and will say, they scorn to be base."—*Barrow*, vol. i., ser. 19.

3. Noble, honourable, worthy of a high-minded person. (*Of things.*)

"And Edith lent her *generous* aid,
And wept, and Lorn for mercy prayed."
Scott: Lord of the Isles, ii. 25.

4. High-spirited; possessed of or showing high-breeding or blood.

"Actæon spies
His opening hounds, and now he hears their cries:
A *generous* pack."
Addison: Ovid; Metamorphoses iii.

5. Full of spirit or strength; strong, heating.

"The phlegm, even in this *generous* wine, was copious."—*Boyle.*

6. Full, overflowing, abundant: as, a *generous* table.

7. Liberal, munificent, openhanded, bountiful.

"*Generous* and charitable, prompt to serve."
Wordsworth: Excursion, bk. vii.

8. Characterized by or manifesting liberality or munificence: as, a *generous* gift or action.

¶ For the difference between *generous* and *beneficent*, see BENEFICENT.

ġĕn′-ĕr-oŭs-lȳ, *adv.* [Eng. *generous*; *-ly*.]

1. With nobility of mind or character; nobly, magnanimously.

"Despise money *generously*, and forgive your enemy bravely."—*Bp. Taylor: Sermons*, vol. iii., ser. 10.

2. In a generous, liberal, or munificent manner; with generosity; liberally, freely, bountifully.

"'Tis better *generously* bestowed on those
Than left the plunder of our country's foes."
Pope: Homer; Iliad xviii. 351.

* **ġĕn′-ĕr-oŭs-nĕss,** *s.* [Eng. *generous*; *-ness*.] The quality or state of being generous; generosity, nobility, highmindedness, liberality.

"Had I not been encouraged by that [illegible] and sweetness of disposition."—*Willis:* [illegible] (Dedic.)

* **ġĕ-nē′-ṣĭ-al,** *a.* [Eng. *genesi(s)*; adj. suff. *-al*.] Of or pertaining to generation.

* **ġĕ-nĕ-ṣĭ-ŏl′-ȯ-ġȳ,** *s.* [Gr. γένεσις [illegible] = origin, source, and λόγος (*logos*) = a discourse.] The science or doctrines of generation.

ġĕn′-ĕ-sĭs, *s.* [Gr. γένεσις (*genesis*) = origin, source, birth, production, generation, creation, &c., from the obsolete root of γένω [illegible], superseded by γεννάω (*gennaō*) = to beget, to engender, causal of γίγνομαι (*gignomai*) = to come into being, to be born, to be produced.]

I. *Ordinary Language:*

1. The act of begetting, producing, or giving origin to; imagination; origin, source, beginning.

"The origin and *genesis* of poor Sterling's [illegible]"—*Carlyle: Life of Sterling.*

2. An explanation of the origin or source of anything.

3. Production.

"If the blood becomes choked with [illegible] there necessarily results a decreased *genesis* of [illegible]"—*Herbert Spencer: Psychol.* (2nd ed.), i. 5.

4. In the same sense as II. 2.

II. *Technically:*

1. *Math.:* A term formerly used, meaning the same as generation. In the genesis of figures the moving magnitude or point is called the describent; the guiding line of the motion is called the dirigent. [GENERATION, II. 1.]

2. *Script. Canon:* The first book of the Pentateuch, of the Old Testament, and of the Bible. In the Hebrew original, as well as in the Septuagint and all modern versions, it occupies this place. It is called in Hebrew בְּרֵאשִׁית (*bereshith*), which is its initial word, correctly translated in the authorised English version, "In the beginning." The opening chapter narrates the creation by God of the earth and all worlds (i. 1–16); ch. ii. 1–3 [illegible] have been added to this chapter. Chapters ii. 4–end to xi. 9, are occupied with [illegible] events in the history of the human race [illegible] ally. At xi. 10 a genealogy begins, designed to give the pedigree of Abram or Abraham, "the father of the faithful," divinely selected from an idolatrous race and family (Joshua xxiv. 2) to found a race (the chosen Jewish one) who should be the special depositaries and defenders of true religion against other races more or less apostate or unenlightened. The remainder of the book gives the history of Abraham, and those of his immediate descendants who were special heirs of the promises made to him—viz., Isaac, Jacob, and the twelve patriarchs (Heb. xi. 9). Counting only from the creation of Adam to the last event in Genesis (the death of Joseph), the space of time is vast; but as the Hebrew, the Septuagint, and the Samaritan Pentateuch all differ as to certain numbers, the exact amount cannot be stated.

The Jewish and, following it, the early Christian Church almost unanimously pronounced Moses the author of the work, deriving his knowledge of the events prior to his time either from direct revelation or from [illegible] documents consulted under Divine guidance. In A.D. 1753 Astruc, an eminent French medical professor, attempted to point out two separate documents, distinguishable by the fact that in one the Divine Being is called almost always אֱלֹהִים (*Elohim*), while in the other he is named יְהוָה (*Jehovah*). On the revival of this hypothesis in the present century, Hengstenberg and others contended against it, maintaining that in every case there was a reason why the Divine name which we find in the particular verse was chosen. Most critical scholars adhere to the opinion of Astruc, and perpetually speak of the Elohist—*i.e.*, the writer who habitually calls God Elohim (q.v.)—and the Jehovist, who designates him Jehovah (q.v.). Hupfield and Boehmer assign the composition of Genesis to five writers: the Elohist, the second Elohist, the Jehovists, and the Later Editor or Compiler. Colenso reduces the [illegible] to four, making the second Elohist and the first Jehovist the same person, writing at different periods of his life. The bishop gives the following as probable dates of the several writers in Genesis, who, he thinks, possibly

were the prophets whose names are appended :—

The first Elohist	B.C. 1100 to 1060	Samuel.
The second Elohist and first Jehovist	1060 to 1010	Nathan.
The second Jehovist	1035	Gad.
The Deuteronomist	641 to 624	Jeremiah.

There are many expressions common to the first Elohist and Ezekiel.

Omitting fractions of verses the following are the portions of Genesis attributed to the first Elohist, and they form a continuous narrative :—

Chapters i. ii. 1-3; v. vi. 9-14, 17-22; vii. 6-9, 11, 13-16, 18, 19, 21-24; viii. 1-5, 13-19; ix. 1-17, 28, 29; xi. 10-26, 31, 32; xii. 4-6, 12; xiii. 6, 12; xvi. 1, 3, 15, 16; xvii. 1-27; xix. 29; xxi. 2-5; xxiii. 1-20; xxv. 7-17, 19-21, 24-26; xxvi. 34, 35; xxviii. 1-9; xxix. 24, 29, 32-34; xxx. 1, 4, 13, 17-24; xxxi. 18; xxxv. 9-16, 19, 20, 22-29; xxxvi. 1-19, 31-40; xxxvii. 1, 2, 28, 36; xlvi. 6-27; xlvii. 7-11, 27, 28; xlviii. 3-7; xlix. 1, 29.

The second Jehovist is believed to have written little but ch. xiv.

The Deuteronomist is credited with—

Chapters vi. 4; x. 8-12; xv. 1-21; xviii. 18, 19; xxii. 14-18; xxiv. 59, 60; xxvi. 4, 5; xxxv. 8.

The rest of the book is attributed to the first Jehovist. The bishop believed the work unhistorical, though in no respect fraudulent. But the immense majority of Christians in this and other countries firmly hold that this old and venerable book was composed by Moses under the guidance of Divine inspiration, and that it is in every part of unimpeachable authority.

3. *Biol.:* The word is often used as the second element of a compound, as abio*genesis*, bio*genesis*, homo*genesis*, hetero*genesis*, xeno*genesis*, &c. (q.v.).

ġĕn′-ĕt (1), ***gen-net**, ***gen-ette** (1), *s.* [Fr. *gennete*, from Sp. *ginette* = (1) a horse, (2) a light horseman from the Berber tribe of Zeneta, who supplied the Moorish Sultans of Grenada with a body of horse, on which they placed great reliance. A. *As adj.:* Pertaining to generation; relating to the origin or course of production of a thing.

"It is the same difference between the natural and mythical modes of interpretation, which Krug intends to point out, referring particularly to the histories of miracles, when he distinguishes the physical or material from the *genetic* and formal mode of explaining them."—*Strauss: Life of Jesus* (trans. 1846), vol. i., § 8, p. 31.

* **B.** *As substantive:*

Med.: A medicine which acts on the sexual organs.

genetic-affinity, *s.*

Biol.: Affinity founded on resemblances existing from a very early age, and which therefore is presumed to imply original relationship. It is called also histological affinity. (*S. P. Woodward.*) Evolutionists assign a greatly enlarged sphere of operation to such genetic affinity.

genetic-spiral, *s.*

Bot.: A helix winding round the stem of a plant, and formed by the points of growth of all the branches. (*Rossiter.*)

ġĕ-nĕt′-ĭ-cal, *a.* [Eng. *genetic*; *-al*.] The same as GENETIC (q.v.).

"The classification aimed at being strictly a *genetical* one."—*Whitney: Life & Growth of Language*, ch. xiii., p. 277.

ġĕ-nĕt′-ĭ-cal-ly̆, *adv.* [Eng. *genetical*; *-ly*.] In a genetic manner; by means of genetics.

ġĕ-nĕtte′, *s.* [GENET.]

***ġĕ-nē′-va** (1), *s.* [A corrupt. of Fr. *genèvre*, *genièvre*; Ital. *ginefro*, from Lat. *juniperus* = a juniper (q.v.).] A kind of spirit prepared chiefly from rye, by mashing, fermenting, and distilling. The spirit is returned to the still, mixed with juniper-berries, &c., and redistilled at a gentle heat.

Ġĕ-nē′-va (2), *s.* [See def.]

Geog.: The name of the chief town of Switzerland.

Geneva Bible, *s.* A Bible or translation of the Bible into English, made and published at Geneva, chiefly by Coverdale, Whittingham, Goodman, Pullain, Sampson, Gilby, and other English Protestant refugees. It was nearly finished when Mary died and Queen Elizabeth succeeded to the throne. It was reprinted in England in 1561, and went through at least fifty editions or impressions, being specially grateful to the English Puritans and the Scotch Presbyterians. Being a small quarto it largely superseded Cranmer's Great Bible, which was an unwieldy folio. It was the first English Bible which adopted the Roman instead of the obsolescent black type, and the first which recognised the division into verses; it was the first also which omitted the Apocrypha. From its stating, in Gen. iii. 7, that our first parents made themselves "breeches," it is sometimes called the Breeches Bible. That rendering, however, had occurred previously in Wycliffe's translation.

Geneva Convention, *s.*

Milit.: A Convention promoted by Mr. Henry Durrant, and signed by the great continental powers in August, 1864, Great Britain, Greece, and Norway joining it in the following year. The chief provisions are :—

1. The neutrality of ambulances and military hospitals.

2. The *personnel* of such ambulances and hospitals, including sanitary officers and naval and military chaplains, to be benefited by the neutrality.

3. The inhabitants of a country, rendering help to the sick and wounded, are to be respected and free from capture.

4. No distinction to be made between the sick and wounded, on account of nationality.

5. A flag and uniform to be adopted, and an armlet for the *personnel* of ambulances and hospitals. The flag and armlet to consist of a red Greek cross on a white ground. The Turks use a red crescent in place of the cross.

To carry out the terms of this convention, the International Society for the Aid of the Sick and Wounded has been organized, with committees in the chief towns in Europe and in the United States. It first played an important part in the Franco-German War, every nation sending its contingent of ambulances, surgeons, &c.

Geneva-cross, *s.*

Milit.: A red Greek cross on a white ground. [GENEVA CONVENTION.]

Geneva-gown, *s.*

Eccles. & Ch. Hist.: The ordinary preaching gown worn by Presbyterian ministers and by Low Church clergymen in this country. It is of black silk, and in shape resembles the gown of a Cambridge D.D. It was adopted by the followers of Calvin, and by the reformers who took refuge in Geneva, as a protest against the use of the alb, which is essentially a sacrificial vestment. [ALB, SURPLICE.]

Geneva-watch, *s.*

Horol.: Properly a kind of watch manufactured at Geneva, or of Swiss make; but also applied to any watch of similar construction. These watches have neither fuse nor chain, and are of inferior workmanship to the English lever watch. [WATCH.]

Ġĕ-nē′-van, *a.* & *s.* [Eng. *Genev(a)*; *-an*.]

A. *As adj.:* Of or pertaining to Geneva; Genevese.

B. *As substantive:*

2. *Ch. Hist.:* A follower or supporter of Genevanism; a Calvinist.

Ġĕ-nē′-van-ĭşm, *s.* [Eng. *Genevan*; *-ism*.] A term which has been applied to Calvinism, from the fact that its founder long lived at Geneva.

Ġĕn-ĕ-vē′şe, *a.* & *s.* [Fr. *Genevois*.]

A. *As adj.:* Of or pertaining to Geneva; Genevan.

B. *As subst.:* A native or inhabitant of Geneva.

* **genge**, *s.* [A.S.; Icel. *gengi*.] A company; attendants, followers.

"Him and his *genge* wel he fedde." *Havelok*, 786.

* **genge**, ***gengen**, *v.i.* & *t.* [A.S. *gengan* = to go, to run; M. H. Ger. *gengen*.]

A. *Intrans.:* To run, to go.

"He *gengeth* wel swithe awai ward." *Owl & Nightingale*, 375.

B. *Trans.:* To further; to advance; to help.

"All thatt icc may *gengenn* the." *Ormulum*, 8,128.

ġĕ-nī′-al (1), *a.* [Gr. γένειον (*geneion*) = the chin.]

Anat.: Of or pertaining to the chin: as, the *genial* processes.

ġē′-nĭ-al (2), ***ġē′-nĭ-all**, *a.* [O. Fr. *genial*, from Lat. *genialis* = pleasant, delightful, from *genius* = genius, social enjoyment.] [GENIUS.]

* 1. Natural; native; inborn; innate.

"The spring drew near, each felt a breast
With *genial* instinct filled."
Cowper: A Tale, June, 1793.

* 2. Contributing to propagation; pertaining to marriage or procreation; generative.

"Thou glad Genius, in whose gentle hand
The bridall bower and *geniall* bed remain."
Spenser: Epithalamion.

* 3. Presiding over marriage.

"So many *geniall* or genitall gods and goddesses."—*Gaule: Mag-Astro-Mantix*, p. 149.

Anat.: Of or pertaining to the chin.

ġĕ-nĭc′-u-lāte, ġĕ-nĭc′-u-lā-tĕd, *a.* [Lat. *geniculatus*, from *geniculum* = a knee or joint; dimin. of *genu* = a knee.]

1. *Ord. Lang.*: Kneed; knee-jointed.

2. *Bot.*: Knee-jointed; bent abruptly like a knee, as the stems of many grasses.

"A piece of some *geniculated* plant seeming to be part of a sugar-cane."—*Woodward: On Fossils.*

geniculate-ganglion, *s.*

Anat.: A gangliform enlargement on the facial nerve.

* **ġĕ-nĭc′-u-lāte,** *v.t.* [Geniculate, *a.*] To form a knot or joint in the stalk of a plant.

* **ġĕ-nĭc-u-lā′-tion,** *s.* [Lat. *geniculatio*, from *geniculatus*, from *geniculum* = a knee or joint.]

1. The act of bending the knee or kneeling; genuflexion.

"There are five points in question . . . *geniculation* at the eucharist, &c."—*Bp. Hall: Remains*, p. 307.

2. Knottiness; the quality of having knots or joints.

ġĕn-ĭc′-u-lŭm, *s.* [Lat. = little knee, dimin. of *genu* = a knee.]

Bot.: The name given by Jungius and others to the node of a stem.

ġē′-niē (*pl.* **ġē′-nĭ-ī**) (1), *s.* [Jinnee, Jenii.]

* **ġē′-niĕ** (2), * **geny,** *s.* [Fr. *genie*, from Lat. *genius* = genius (q.v.).] Genius, disposition, inclination; turn of mind.

"His *geny* being chiefly inclined to poetry."—*Wood: Athenæ Oxonienses; Davenant.*

ġē′-nĭ-ī, *s. pl.* [Jinnee.] Fabulous beings regarded by the Arabians as intermediate between angels and men, and capable of assuming any form, or of becoming invisible at pleasure.

"Well might triumphant *genii* bear thee hence,
Illustrious conqueror of common sense!"
Byron: English Bards & Scotch Reviewers.

* **ġē′-nĭ-ō,** *s.* [Ital., from Lat. *genius* = genius (q.v.).] A man of a particular disposition or turn of mind.

"Some *genios* are not capable of pure affection."—*Tatler.*

Surg.: The restoration of the chin after it has been injured.

ġĕn′-ĭp, *s.* [Genipa.]

genip-tree, *s.*

Bot.: [Genipa].

ġĕn′-ĭp-a, *s.* [Genipapa.]

Bot.: A genus of cinchonaceous plants, tribe Cinchoneæ, family Gardenidæ. It consists of fruit-bearing trees. *Genipa americana*, the Marmalade Box of Dutch Guiana, bears the genipap (q.v.). The fruit of *G. brasiliensis* is also eaten in Brazil, but, according to Martius, it is not fit to be used till it has become bletted, and is better preserved with sugar than fresh. [Genipap.]

ġĕn′-ĭ-păp, *s.* [*Genipap*, or *genepapa* = the Guiana name.]

Bot.: The fruit of *Genipa americana*. [Genipa.] It is as large as an orange, is whitish-green, but has a dark-purple juice with an agreeable vinous taste. It is in much request in Dutch Guiana.

ġĕ-nĭs′-ta, *s.* [Lat. *genista*, *genesta* = the broom, the Spanish broom; perhaps from Celt. *gen* = a small bush.]

Bot.: The typical genus of the subtribe Genisteæ (q.v.). It has the calyx shortly two-lipped and the lips deeply toothed. Seventy species are known, three of them British. *Genista tinctoria* is the Dyers' Greenweed. It is unarmed, and is found in England, and more rarely in Scotland, and in county Dublin in Ireland. It yields a yellow dye. Ray says that the milk of cows feeding upon it is rendered bitter, and that this bitterness is retained in butter and cheese made from the milk. *G. pilosa*, also unarmed, is rare and local, while *G. anglica*, a spinous plant, is common in England and in Scotland, but absent from Ireland.

ġĕ-nĭs′-tĕ-æ, *s. pl.* [Lat. *genist(a)*, and fem. pl. adj. suff. *-eæ.*]

Bot.: A subtribe of papilionaceous plants, tribe Loteæ. It consists of shrubs with entire leaflets, and the stamens all united, instead of being diadelphous. Genera represented in Britain: Genista, Ulex, Cytisus (q.v.).

* **ġĕn′-ĭ-tal,** * **gen-i-tall,** *a.* & *s.* [O. Fr. *genital*, from Lat. *genitalis* = generative, from *genitum*, sup. of *gigno* = to beget.]

A. *As adj.*: Pertaining to generation or procreation; generative.

"These tenuous vapours . . . will doubtless compose as *genital* as matter as any can be prepared in the bodies of animals."—*Glanvill: Pre-existence of Souls*, ch. xiv.

B. *As subst.* (*Pl.*): Those parts of an animal which are the immediate instruments of generation; the privates, the sexual organs.

"That they worshipped the head of an ass, and even the *genitals* of their high priest."—*Grew: Cosmologia Sacra*, bk. v., ch. vi.

ġĕn′-ĭ-tĭng, ***gĭn′-nĭt-ĭng, jĕn′-nĕt-ĭng, jūn′-ēat-ĭng,** *s.* [O. Fr. *jeannet*; Fr. *jeannot*, a dimin. of *Jean* = John, from their being ripe by St. John's Day, June 24th; cf. *John-apple*; or Eng. *June*, and *eating*. (*Mahn*, &c.)] A variety of apple which ripens early.

"In July come early pears and plums in fruit, *genitings* and codlins."—*Bacon.*

ġĕn-ĭ-tī′-val, *a.* [Lat. *genitivus.*] [Genitive.]

Gram.: Pertaining or relating to the genitive case.

ġĕn′-ĭ-tĭve, *a.* & *s.* [Fr. *génitif* = the genitive case, from Lat. *genitivus* = of or pertaining to generation, from *genitum*, sup. of *gigno* = to beget; Sp. & Ital. *genitivo*. The Latin *genitivus casus* = the genitive case, was a mistranslation of the Greek γενικη πτωσις (*genikē ptōsis*), which properly should have been translated *casus generalis* = the general case, or that case which denotes the genus or kind. (See extract from Max Müller under B.)]

A. *As adjective*:

Gram.: A term applied to that case of nouns, adjectives, pronouns, &c., which pertains to or indicates origin, source, possession, or the like, or to the relation expressed by such a case. In English it is called possessive.

"The Hebrews express this union . . . by putting in the *genitive* case the word which expresses one of them."—*Digby: Of Man's Soul*, ch. ii.

B. *As subst.*: That case in the declension of nouns, adjectives, pronouns, &c., which denotes or indicates origin, source, possession, or the like. In English it is called the possessive case, and is the only case which retains a case ending.

"The Latin *genitivus* is a mere blunder, for the Greek word γενικη (*genikē*) could never mean *genitivus*. *Genitivus*, if it is meant to express the case of origin or birth, would in Greek have been called γεννητικη (*gennētikē*), not γενικη (*genikē*). . . . *Genikē*, [illegible] had a much wider, a much more philosophical meaning. It means *casus generalis*, the general case, or rather the case which expresses the genus or kind. This is the real power of the *genitive*. . . . The termination of the *genitive* is, in most cases, identical with those derivative suffixes by which substantives are changed into adjectives."—*Max Müller: Lectures on the Science of Language.*

ġĕn-ĭ-tō-, *pref.* [Lat. *genitus*, pa. par. of *gigno* = to beget.] Pertaining to generating, as the *genito*-crural nerve, the *genito*-urinary [illegible].

* **ġĕn′-ĭ-tor,** *s.* [Lat., from *genitus*, pa. par. of *gigno* = to beget.]

1. One who begets; a father, a sire, a progenitor.

2. One who originates.

"They, I say, that were the wise fathers and [illegible] of this purgatory, were, in my minde, the wisest of all their generation."—*Latimer: Sermon before the Convocation.*

3. (*Pl.*): The genitals.

"Wherein sponges or linen clothes being [illegible] shulde be layd on ye hed, & the *genitores* [illegible] therewith washed."—*Sir T. Elyot: Castel of Helth*, bk. iv., ch. ii.

* **ġĕn′-ĭ-türe,** *s.* [Fr. *géniture*, from Lat. *genitura*, from *genitus*, pa. par. of *gigno* = to beget; O. Sp., Port., & Ital. *genitura*.]

1. Procreation, birth, generation.

"If a son marries his mother, she who is [illegible] greater by right of *geniture*, becomes [illegible] *monio*."—*Bishop Taylor: Rule of Conscience*, bk. [illegible] ch. ii., rule 3.

2. The power of procreation.

"It absumeth the *geniture*."—*Venner: Treatise of Tobacco*, p. 416.

3. (*Pl.*): The genitals.

ġē′-nĭ-ŭs, *s.* [Lat. = a tutelar spirit of a person, inclination, wit, talent; Sp. & Ital. *genio*; Fr. *génie*.]

1. A tutelary deity, whose province it was to take care of every one from the time of his birth; the ruling or protecting power of men, places, or things.

"The *genius* and the mortal instruments
Are then in council."
Shakesp.: Julius Cæsar, ii. 1.

2. The natural bent, disposition, or inclination of the mind; a particular natural talent or aptitude of mind fitting a man in an especial degree for some particular study, pursuit, or course of life; a peculiar natural structure of mind qualifying the possessor for a particular employment.

3. That natural power or faculty or combination of faculties of the mind which bears or brings forth, produces, discovers, or invents; intellectual endowment of the highest kind; superior power of invention or origination of any kind, or of producing original combinations; talent.

"The renowned university on which his *genius* had already begun to impress a peculiar character, still plainly discernible after the lapse of a hundred and sixty years, had sent him to the convention."—*Macaulay: Hist. Eng.*, ch. x.

4. A person endowed with uncommon intellectual powers; a man of superior intellectual faculties.

"That age had produced no more inventive *genius* and no more daring spirit."—*Macaulay: Hist. Eng.*, ch. vii.

5. The distinguishing disposition, bent, character, or tendency: as of a nation, a religion, a language, and the like.

¶ (1) Crabb thus discriminates between *genius*, *ability*, *talent*, *capacity*, *cleverness*, and *wisdom*: "*Genius* implies high and peculiar gifts of nature, impelling the mind to certain favourite kinds of mental effort, and producing new combinations of ideas, imagery, &c. *Talent* supposes general strength of intellect, with a peculiar aptitude for being moulded and directed to specific employments and valuable ends and purposes. *Genius* is connected more or less with the exercise of imagination, and reaches its ends by a kind of intuitive power. *Talent* depends more on high mental training, perfect command of all the faculties, memory, judgment, sagacity, &c. Hence we speak of a *genius* for poetry, painting, &c., and a *talent* for business or

diplomacy. Among English orators Lord Chatham was distinguished for his *genius;* William Pitt for his pre-eminent *talents*, and especially his unrivalled *talent* for reply. *Genius* is the power of new combinations, *wisdom* the habitual employment of a patient and comprehensive understanding in combining various and remote means to promote the happiness of mankind. *Abilities* may be exerted in conduct, or in the arts and sciences, but rather in the former. *Talents* are the power of executing well a conception either original or adopted. *Capacity* is a power of acquiring. *Cleverness* designates mental dexterity and quickness." (*Crabb: Eng. Synon.*)

(2) For the difference between *genius* and *intellect*, see INTELLECT; for that between *genius* and *taste*, see TASTE.

GENOUILLIERES.

A. Plain Knee-boss or Knee-piece (1325). B. From the monument of the Black Prince in Canterbury Cathedral. (In this case the armour of complete plate has been attained, and here the genouillieres have articulations above and below.) C. From monumental brass of Thos. Cheyne, Esq. (1368), at Drayton Beauchamp, Bucks. D. From the tomb of Hartmann von Kronberg (1372), at Kronberg. E. From statue of a knight of the De Sulney family, in the church of Newton Sulney, Derbyshire. (Here the material of the cuissard passes beneath the boss, terminating in an escallop.)

plates, when chain armour covered the leg, and led by degrees to the adoption of greaves and shin-pieces, and ultimately to entire plate armour. They were sometimes decorated with incised and gilt ornaments, and, in the fifteenth century, took a variety of fanciful forms.

"The strok . . . full oppon ys *genyllere*."
Sir Ferumbras, 5,631.

2. *Fortification:*

(1) A part of the interior slope of the parapet below the sill of an embrasure. It covered the lower part of a gun-carriage.

(2) The height of the parapet above the banquette in a barbette battery.

genre (as **zhan′-rę**), *s.* [Fr., from Lat. *genus* (genit. *generis*) = a class, a kind.]

Art: A term applied to pictures of life and manners, which, for want of a definite character, are classed together as of a certain *genre* or kind. Under this title are comprised the grave episodes of life, which are to history what a single scene is to a drama, or a lyric to an epic poem. Also comic pictures of all kinds. . . The principal *genre* pictures consist of scenes of every-day life, and may be classified. In taking for its subject the events of daily life, *genre*-painting avoids religious themes as high and lasting, as well as historical subjects, which, though transitory, ought never to appear so. All the passing events of life, its characters and aims, offer fitting subject for *genre*-painting. (*Fairholt.*)

ġĕns (*pl.* **ġĕn′-tēş**), *s.* [Lat.]

Rom. Antiq.: A class or house, the individuals composing which were termed in reference to each other, *Gentiles*. Each *gens* was made up of a certain number of branches or families (*familiæ*), and each *familia* was composed of individual members. Several gentes made up the curiæ and tribes. The members of each gens bore a common name, as the Fabian *gens*, the Julian *gens*, &c., and were united by certain common religious rites.

gens-dar-mer-y, *s.* [GENDARMERY.]

*** ġĕnt,** *a.* [O. Fr.; O. Sp. *gento;* O. Ital. *gente*, from Lat. *genitus*, applied to one of noble birth.] [GENEROUS.] Elegant, neat, handsome, comely, pretty, gentle.

"To wite of her maners, to se his body *gent*."
Robert de Brunne, p. 252.

ġĕnt, *s.* [An abridged form of *gentleman* (q.v.).] A gentleman. (*Vulgar.*)

ġĕn-tēel′, *a.* [The same word as *gentle*, the *ee* representing the sound of the O. Fr. *i* in *gentil.*] [GENTLE, *a.*]

1. Graceful or elegant in mien, appearance, form, or dress.

"I perched at will on every spray,
My form *genteel*, my plumage gay,
My strains for ever new."
Cowper: On a Goldfinch.

2. Polite, elegant in manners, well-bred, courteous, refined; having the manners of a well-bred person; free from vulgarity.

"A set of *genteel* good-natured youths fallen into such a manner of life would form almost an academy."
—*Steele: Spectator*, No. 230.

3. Free from vulgarity or buffoonery; treating of the habits, manners, or doings of good society.

"Their poets have no notion of *genteel* comedy."—
Addison: On Italy.

4. Sufficient to maintain a person in a respectable and comfortable manner; furnishing a competence.

"Painting portraits and pictures in a *genteel* style of his own."—*Walpole: Anecdotes of Painting*, vol. iv., ch. iii.

* 5. Neat, elegant.

¶ Crabb thus discriminates between *genteel* and *polite:* "*Gentility* respects ranks in life; *politeness* the refinement of the mind and outward behaviour. A *genteel* education is suited to the station of a gentleman; a *polite* education fits for polished society and conversation, and raises the individual among his equals. There may be *gentility* without *politeness*, and vice versa. A person may have *genteel* manners, a *genteel* carriage, a *genteel* mode of living as far as respects his general relation with society; but a *polite* behaviour and a *polite* address, which qualify him for every relation in society, and enable him to shine in connection with all orders of men, is independent of either birth or wealth; it is in part a gift of nature, although it is to be acquired by art." (*Crabb: Eng. Synon.*)

*** ġĕn-tēel′-ĭsh,** *a.* [Eng. *genteel; -ish.*] Somewhat genteel.

*** ġĕn-tēel′-īze,** *v.t.* [Eng. *genteel; -ize.*] To make genteel, to gentilize.

"Every one of them . . . *genteelized* along with him."—*Sterne: Tristram Shandy*, vi. 138.

ġĕn-tēel′-lȳ, * gen-teel-y, *adv.* [Eng. *genteel; -ly.*]

1. Gracefully; with politeness or good manners; politely.

"He answered modestly and *genteely*."—*Walpole: Anecdotes of Painting*, vol. iii., ch. iv. (Note.)

2. With grace, elegance, or neatness.

"[He] treated her *genteely*, so that, dressed,
She looked extremely well where'er she went."
Byron: Beppo, 22.

3. In a respectable manner; like people of fashion.

"Their customers are gone abroad to live *genteelly* at Lisle or Brussels."—*V. Knox: Winter Evenings*, Even. 9.

ġĕn-tēel′-nĕss, *s.* [Eng. *genteel; -ness.*]

1. The quality or state of being genteel; elegance, grace; good-breeding; gentility.

ġĕnth′-īte, *s.* [Named after Genth, who, in 1851, described it under the name of Nickel-gymnite.]

Min.: An amorphous mineral, containing serpentine. It is opaque to translucent, is of a pale apple green or yellow colour, and has a greenish-white streak. Compos.: Silica, 33·6 to 35·4; protoxide of nickel, 30·4 to 30·6; protoxide of iron, 0·2 to 2·2; magnesia, 0·2 to 4·1; lime, 0·3 to 4·1; and water, 17·1 to 19·1. It occurs near Lake Superior, and in Spain. Rottisite (q.v.) may be a variety. (*Dana.*)

ġĕn′-tian (**tian** as **shȳ-ąn**), *s.* [Lat. *gentiana* (q.v.); Fr. *gentiane.*]

1. *Bot.:* The English name of the genus Gentiana (q.v.). Five species exist in England, the Marsh Gentian (*Gentiana pneumonanthe*), the Spring Gentian (*G. verna*), the Small Alpine Gentian (*G. nivalis*), the Small-flowered Gentian (*G. Amarella*), and the Field Gentian (*G. campestris*). The last is the commonest species, occurring on hilly pastures in England and Ireland, and more abundantly in Scotland, especially near the sea. *G. lutea* grows in Switzerland and the mountainous parts of Germany.

"See how the giant spires of yellow bloom
Of the sun-loving *gentian*, in the heat
Are shining on these naked slopes like flame.
Matthew Arnold: Empedocles on Etna, i. 2.

2. *Phar.: Gentianæ Radix* (Gentian Root), the dried root of *Gentiana lutea*. The root occurs in lengthened cylindrical pieces, from half-an-inch to one inch in diameter, and several inches long, wrinkled longitudinally, and often twisted; brown externally, yellow, tough, and spongy within; it has a sweet smell and a sweet and bitter taste. It is used to prepare *Extractum Gentianæ* (Extract of Gentian), *Infusum Gentianæ compositum*, *Mistura Gentianæ* (Gentian Mixture), and *Tinctura Gentianæ Composita* (Compound Tincture of Gentian). Gentian is a bitter stomachic tonic, which improves the appetite and gives tone to the stomach.

gentian-bitter, *s.*

Chem.: A peculiar bitter separated from the aqueous solution of the root *Gentiana lutea* by animal charcoal, and extracted therefrom by hot alcohol. It is yellow, uncrystallizable, and reduces an alkaline cupric solution. (*Watts: Dict. Chem.*)

gentian-root, *s.*

Pharm.: [GENTIAN, 2, *Pharm.*].

gentian-spirit, *s.* An alcoholic liquor much drunk by the Swiss. It is made by the vinous fermentation of the infusion of gentian.

ġĕn-tĭ-ā′-nạ (or **tĭ** as **shĭ**), *s.* [Lat. = the herb gentian (*Gentiana lutea*). Named after an Illyrian king, Gentius.]

Bot.: The typical genus of the tribe Gentianeæ, the order Gentianaceæ, and the alliance Gentianales. It has the corolla tube subclavate, the anthers straight, and the stigmas two. About 150 species are known, chiefly in temperate regions. Five are British. [GENTIAN.] The common gentian root of the druggists is mostly *Gentiana lutea*. [GENTIAN-ROOT]. *G. campestris* and *Amarella*, British species, are domestic substitutes for it in England. *G. punctata*, *pannonica*, *purpurea*, &c., on the European continent, *G. Kurroo*, in the Himalaya Mountains, and *G. Catesbæi*, in the United States. *G. cruciata* has been used, but unsuccessfully, in hydrophobia.

ġĕn-tĭ-ạ-nā′-çē-æ (or **tĭ** as **shĭ**), *s. pl.* [Lat. *gentian*(*a*) (q.v.), and fem. pl. adj. suff. *-aceæ.*]

Bot.: An order of Perigynous Exogens, the typical one of the alliance Gentianales (q.v.). It consists of herbs or rarely of shrubs, with opposite entire exstipulate leaves; sessile, or having their petioles united into a sheath, often three to four-ribbed. Flowers generally

regular. Calyx divided, inferior, persistent. Corolla monopetalous, hypogynous, generally regular and persistent. Stamens inserted upon the corolla, all in the same line, equal in number to the segments, and alternate with them. Ovary with two carpels, one or partly two-celled, many-seeded. Style one; stigmas two, right and left of the axis. The order is close to Apocynaceæ. It contains about 60 genera, and 450 known species. They are bitter and tonic. It is divided into two tribes, Gentianeæ and Menyantheæ (q.v.).

ġĕn′-tian-al (tian as **shў-ạn),** *a.* [Mod. Lat. *gentianalis.*]

Bot.: Akin to Gentianaceæ or to Gentiana, as the gentianal alliance.

ġĕn-tĭ-ạn-ā′-lĕş (or **tĭ** as **shĭ),** *s. pl.* [Masc. & fem. pl. of Mod. Lat. *gentianalis,* from Lat. *gentiana* (q.v.).]

Bot.: The Gentianal Alliance. An alliance of perigynous exogens, with dichlamydeous, monopetalous flowers, axile or parietal placentæ, and a minute embryo, or with the cotyledons much smaller than the radicle, lying in a large quantity of albumen. Lindley includes under it the orders Ebenaceæ, Aquifoliaceæ, Apocynaceæ, Loganiaceæ, Diapensiaceæ, Stilbaceæ, Orobanchaceæ, and Gentianaceæ.

ġĕn-tĭ-ā′-nĕ-æ (or **tĭ** as **shĭ),** *s. pl.* [Lat. *gentian(a),* and fem. pl. adj. suff. *-eæ.*]

2. A person of noble or gentle birth; one of high rank.

"A partie of *gentiles* raised Edmond Yrenside into kyng."—*Trevisa,* vii. 99.

II. *Scrip.* (*Pl.*): All the nations of the world, excepting the Jews. In the Old Testament it is the rendering of the Hebrew word גּוֹיִם (*goïm*) = peoples, nations, the pl. of גּוֹי (*goi*) = a nation, a people. At first it was used as a mere ethnological word, and quite respectfully, but as the Jews become more conscious of their privileges, they employed it more and more scornfully of the nations around (Gen. x. 5; Isa. lxvi. 16; Jer. xiv. 22). In the New Testament Gentiles is the rendering of the Greek ἔθνη (*ethnē*) = the pl. of ἔθνος (*ethnos*) = a number of people living together, a nation. St. Peter, moved by a vision, was the first of the Twelve to preach to the Gentiles (Acts x.), but the Apostle of the Gentiles was St. Paul (Gal. ii. 15).

"We who are Jews by nature and not sinners of the *Gentiles.*"—*Galatians* ii. 15.

ġĕn′-tĭ-sĭn, *s.* [Eng. &c. *gent(ian); -in* (*Chem.*).]

Chemistry:

Gentianin, $C_6H_3(OH)_2 \cdot CO \cdot C_6H_3(CH_3)<$ [illegible]

A substance occurring in the root of *Gentiana lutea,* from which it is extracted by alcohol. Gentianin forms large yellow, silky needles, which sublime between 300° and 400° with partial decomposition. Slightly soluble in water, soluble in boiling alcohol, easily soluble in alkalies; forming a yellow solution. When fused with caustic potash it yields acetic acid, phloroglucin, and oxysalicylic acid.

ġĕn′-tle, *gen-til, *gen-tille, *gen-tyl, *a., adv., & s.* [Fr. *gentil* = gentle, from Lat. *gentilis* = belonging to the same clan or family; *gens* (genit. *gentis*) = a race, a clan; Sp. & Port. *gentil;* It. *gentile.*] [GENTEEL, GENTILE.]

A. *As adjective:*

"I'll make him dance. Will you go, *gentles?*"—*Shakesp.: Merry Wives of Windsor,* iii. 2.

2. A trained hawk.

¶ (1) Crabb thus discriminates between *gentle* and *tame: Gentleness* lies rather in the natural disposition; *tameness* is the effect either of art or circumstance. Any unbroken horse may be *gentle,* but not tame: a horse that is broken in will be *tame,* but not always *gentle.* Animals are in general said to be *gentle* who show a disposition to associate with man, and conform to his will; they are said to be *tame,* if either by compulsion or habit they are brought to mix with human society. In the moral application *gentle* is always employed in the good, and *tame* in the bad, sense; a *gentle* spirit needs no control. A *gentle* expression is devoid of all acrimony, and serves to turn away wrath; a *tame* expression is devoid of all force or energy, and ill-calculated to inspire the mind with any feeling whatever." (*Crabb: Eng. Synon.*)

(2) For the difference between *gentle* and *soft,* see SOFT.

gentle-hearted, *a.* Of a gentle, mild, or tender heart or disposition.

"Tell a countrey *gentlewoman* that the wind is south-west, and the weather louring, and like to rain, and she will easily understand, 'tis not safe for her to go abroad thin-clad, in such a day, after a fever."—*Locke: Human Understanding*, bk. iv., ch. xvii., § 4.

ġĕn′-tle-wọm-ạn-līke, *s.* [Eng. *gentlewoman*, and *like.*] The same as GENTLEWOMANLY (q.v.).

ġĕn′-tle-wọm-ạn-lȳ, *a.* [Eng. *gentlewomanly.*] Like a gentlewoman or lady; becoming a lady.

ġĕn′-tlȳ, * **gen-til-ly,** *adv.* [Eng. *gent(le)*; *-ly.*]

1. Of high position or descent: as, one *gently* born.

2. With gentleness; softly, meekly; tenderly, mildly.

"He *gently* gan him to demaund of all
That did betwixt him and the squire betide."
Spenser: F. Q., V. i. 23.

3. Softly; without roughness, violence, or harshness.

"O *gently* on thy suppliant's head,
Dread goddess, lay thy chastening hand!'
Gray: Hymn to Adversity.

gently-budding, *a.* Filling out; becoming plump.

"Her graceful arms in meekness bending
Across her *gently-budding* breast."
Byron: Bride of Abydos, i. 6.

* **Ġĕn′-toȯs,** *s. pl.* [Port. *gentio* = a heathen, a gentile.]

1. *Gen.:* The Hindoos in general.

2. *Spec.:* The Teloogoos or Telugus, a race shown by their language, which was not derived from the Sanscrit, to be of Turanian origin. They inhabit the region north of Madras near the Bay of Bengal.

* **Gentoo-language,** *s.* The Teloogoo.

* **ġĕn′-trĭçe,** * **gen-trise,** * **gen-ter-ice,** *s.* [O. Fr. *genterise.*] Gentility, good descent, nobility. [GENTRY.]

"Yet that may come of idleness as weel as *gentrice*."—*Scott: Redgauntlet*, let. xi.

ġĕn′-trȳ, * **gen-ter-ie,** * **gen-ter-y,** * **gen-ter-ye,** *s.* [A corrupt. of *gentrice* (q.v.).]

1. High birth; noble descent or extraction; rank.

"Also to have pride of *gentrie* is right gret folie; for oft time the *gentrie* of the bodie benimeth the *gentrie* of the soule."—*Chaucer: Persones Tale.*

* 2. An act becoming a person of good birth or position.

"What say we eke of hem that delliten hem in swearing, and hold it a *genterie* or manly dede to swere gret othes."—*Chaucer: Persones Tale.*

* 3. Civility, politeness, complaisance, courtesy.

"Shew us so much *gentry* and good-will,
As to extend your time with us awhile."
Shakesp.: Hamlet, ii. 2.

4. People of good position, as landed proprietors, merchants, &c.; persons of education, good breeding, and social status; the class below the nobility.

"So it was with Monmouth. In 1680 he had been adored alike by the *gentry* and by the peasantry of the west."—*Macaulay: Hist. Eng.*, ch. v.

ġĕn′-tȳ, *a.* [Eng. *gent*, a.; *-y.*] Elegantly formed, neat, comely.

"Sae sweetly move her *genty* limbs,
Like music notes o' lovers' hymns."
Burns: My Lady's Gown.

ġĕn′-ụ, *s.* [Lat. = a knee.]

Anat.: A bend; as, the *genu* of the *corpus callosum*; the *genu* of the optic tract.

ġĕn′-ụ-ănt, *a.* [Lat. *genu* = the knee.]

Her.: Kneeling.

* **ġĕn′-ụ-flĕct,** *v.i.* [Lat. *genu* = the knee, and *flecto* = to bend.] To bend the knee, particularly in worship.

ġĕn-ụ-flĕc′-tion, gĕn-ụ-flexion (flexion as **flĕx′-shŭn),** *s.* [Fr. *génuflexion*, from Low Lat. *genuflexio*, from Lat. *genu* = the knee, and *flexio* = a bending; *flecto* = to bend; Sp. *genuflexion*; Ital. *genuflessione.*] The act of bending the knee, particularly in worship; adoration expressed by bending the knee.

"Englishmen who had no scruple about antiphonies, and *genuflexions*, altars and surplices."—*Macaulay: Hist. Eng.*, ch. 1.

ġĕn′-ụ-īne, *a.* [Lat. *genuinus* = innate, inborn, genuine, from the same root as *genus* (q.v.); Fr. *génuine*; Sp. & Ital. *genuino.*]

1. Belonging to or coming from the true stock; real, true; not counterfeit, false, spurious, or adulterated.

"I grieved for Buonaparte with a vain
And all unthinking grief! for who aspires
To *genuine* greatness but from just desires,
And knowledge such as he could never gain."
Wordsworth: Sonnet, dedicated to Liberty, 1801.

2. Trustworthy; not false or double-faced: as, a *genuine* man. (*Colloquial.*)

ġĕn′-ụ-īne-lȳ, *adv.* [Eng. *genuine*; *-ly.*] In a genuine manner; without falseness, adulteration, or foreign admixture; truly, purely, fairly, legitimately.

"He had *genuinely* raised a question which was distasteful to some portions of the House."—*Daily Telegraph*, Nov. 7, 1882.

ġĕn′-ụ-īne-nĕss, *s.* [Eng. *genuine*; *-ness.*] The quality or state of being genuine; freedom from falseness, adulteration, or foreign admixture; purity; naturalness.

"St. Austin reasoned well in vindicating the *genuineness* of the Bible."—*Watson: Apology for the Bible*, let. 2.

¶ *Christian apologists:* The words *genuineness* and *authenticity* have been used in different senses by different writers. For the distinction between them, see AUTHENTIC, A. II. 1.

* **ġĕn-ū′-ĭt-ȳ,** *s.* [As if from Low Lat. *genuitas*; cf. *ingenuity.*] Simplicity; sincerity.

ġē′-nŭs (*pl.* **ġĕn′-ĕr-ą**), *s.* [Lat.] Birth, descent, origin; a race, a kind.

I. *Ord. Lang.:* A class, a kind, a species.

"Rarity and density (which are the proper differences of quantity), cannot change the common nature of quantity, their *genus*, which, by being so to them, must be univocally in them both." — *Digby: Of Bodies*, ch. xiv.

II. *Technically:*

1. *Logic:* A class of objects containing several species; a class more extensive than a species; a universal which is predicable of several things of different species.

"In the defining of words, which is nothing but declaring their signification, we make use of the *genus*, or next general word that comprehends it. Which is not out of necessity, but only to save the labour of enumerating several simple ideas, which the next general word or *genus* stands for; or, perhaps, sometimes the shame of not being able to do it."—*Locke: On Human Understanding*, bk. iii., ch. iii.

2. *Mus.:* Sort or class, especially used with reference to scales; as, the diatonic, chromatic, and enharmonic genera.

3. *Science:*

(1) *Zool. & Bot. Classification:* An assemblage of species or of sub-genera closely agreeing together in all essential characteristics, not found in any others of the sub-family or family to which they belong. It may be divided into sub-genera. Among animals, *Mus* is a genus containing, among other animals, both the domestic mouse and the rat, which, differing in size, &c., and being clearly distinct species, have still a community of structure obvious to all. So also among plants, the various species of the rose constitute the genus *Rosa*. In the Latin name of a plant or animal adopted by naturalists, the first word indicates the genus, and the second the species: as *Mus musculus*, *Rosa spinosissima*. In the English equivalent, the genus is the second word and the species the first, as, the Common Mouse, the Burnet-leaved Rose.

(2) *Other sciences:* Sometimes a classification like that adopted by naturalists is used in other sciences. Thus, of skin diseases there is a genus *Acne* with various species, *Acne simplex*, *A. rosacea*, &c.

¶ (1) *Subaltern genera:*

Logic: Terms which are alternately genera and species, genera to the lower, and species to the higher and wider conceptions.

(2) *Summum genus:*

Logic: The highest genus; a genus which is not considered as a species of anything; as *being*.

"The widest class, with which Abstraction ceases, is called the Highest (*summum*) Genus, because in this hierarchy of conceptions it is not brought under any other genus as its species, but is itself the genus to each conception in the series. Thus the—
Individual is neither genus nor species.
Infima Species is never a genus.
Summum Genus is never a species.
Subalterna Genera are genera to those below them, and species to those above."—*Thomson: Laws of Thought*, § 50.

ġĕ-ō-, *pref.* [Gr. γεω (*geō*), put for γήιος (*gēios*) = belonging to land or earth; γέα γῆ (*gea*, *gē*) = the earth.] A frequent prefix in words derived from the Greek, and referring to the earth: as, *geography*, *geology*, &c.

ġĕ-ō-cā-lȳc′-ĭ-dæ, *s. pl.* [Mod. Lat. *geocalyx*, genit. *geocalyc(is)*; Lat. fem. pl. adj. suff. *-idæ*.]

Bot.: A family of Jungermanniaceæ, sub-order Junger manneæ.

ġē-ō-cā′-lȳx, *s.* [Pref. *geo-*, and Lat. *calyx* (q.v.).]

Bot.: The typical genus of the family Geocalycidæ (q.v.).

ġĕ-ō-çĕn′-trĭc, *a.* [Pref. *geo-*, and Eng. *centric* (q.v.).]

Astronomy:

1. As viewed from or having relation to the earth as centre; as, the *geocentric* latitude or longitude, or what is distinguished from the heliocentric—that is, as seen from the centre of the sun.

2. Having reference to the centre of the earth, as distinguished from any spot on its surface.

geocentric-latitude, *s.*

Astronomy:

1. *Of a planet:* Its latitude as seen from the earth.

2. *Of a place on the earth's surface:* The angle included between the radius of the earth through the place and the plane of the equator. It is contradistinguished from geographical latitude, which always exceeds it slightly in amount.

geocentric-longitude, *s.*

Astron. (*Of a planet*): The distance measured on the ecliptic between the geocentric place and the first point of Aries.

ġĕ-ō-çĕn′-trĭc-ąl, *a.* [Eng. *geocentric*; *-al.*]

Astron.: The same as GEOCENTRIC (q.v.).

ġĕ-ō-çĕn′-trĭc-ąl-lȳ, *adv.* [Eng. *geocentrical*; *-ly.*] In a geocentric manner.

ġĕ-ō-çēr-ĕl′-īte, *s.* [Pref. *geo-*; Lat. dimin. of *cereus* = wax-coloured, and suff. *-lite* (*Min.*) (q.v.).]

Min.: A white, brittle, and easily-pulverised mineral, containing carbon 79·24, hydrogen 13·21, and oxygen 7·55 = 100. Obtained from the dark-brown coal of Gesterwitz. It is called also Geoceric-acid. (*Dana.*)

ġē-ō-çēr′-ĭc, *a.* [Pref. *geo-*; Lat. *cera*; Gr. κηρός (*kēros*) = wax, and suff. *-ic.*] (See etym. and compound.)

geoceric-acid, *s.*

Min.: The same as GEOCERELLITE (q.v.).

ġĕ-ŏç′-ĕr-īte *s.* [Pref. *geo-*; Lat. *cera*; Gr. κηρός (*kēros*) = wax, and suff. *-ite* (*Min.*) (q.v.).]

Min.: A white waxy mineral, consisting of carbon 79·24, hydrogen 13·13, and oxygen 7·81, from the dark-brown coal of Gesterwitz. Akin to Geocerellite. (*Dana.*)

ġĕ-ŏc′-ō-rēs, ġĕ-ŏc-ō-rī′-zą, ġĕ-ŏc-ō-rĭ′-zæ, *s.* [Pref. *geo-*, and Gr. κόρις (*koris*) = a bug.]

Entom.: Land-Bugs. A section, group, or tribe of insects, sub-order Heteroptera. The antennæ are always visible, and the legs are formed for running. The bed bug is one of them. Mr. Westwood calls them Auricorizæ (Air-bugs), meaning that they breathe air, rather than Geocorizæ (Land-bugs), for some are found on the surface of water, some going far out even on the sea. There are nine sub-tribes or families: (1) Ploteres, (2) Riparia, (3) Reduvina, (4) Membranacea, (5) Bicelluli, (6) Cœcigenia, (7) Lygœodea, (8) Coreodea, (9) Scutata (q.v.).

ġĕ-ō-crō′-nīte, *s.* [Ger. *geocronit*; pref. *geo-*, and Gr. Κρόνος (*Kronos*) = Saturn, used by the alchemists for lead.]

Min.: An orthorhombic lead-grey, or greyish-blue mineral, of metallic lustre; its hardness 2 to 3; its sp. gr. 6·4 to 6·6; its compos.: Sulphur 16·5; antimony 16·7; lead 66·8 = 100. Found in Sweden, Spain, and Tuscany. (*Dana.*)

ġĕ-ō-çȳ′-clĭc, *a.* [Pref. *geo-*, and Eng. *cyclic.*]

1. Of or belonging to the revolutions of the earth.

2. Periodically encircling the earth.

geocyclic-machine, *s.* A machine for exhibiting the simple processes by which day and night and the seasons are produced.

ġē′-ōde, *s.* [Fr., from Gr. γαιώδης (*gaiōdēs*) = earthy, from γῆ, γαῖα (*gē*, *gaia*) = the earth.]

Mineralogy & Geology:

1. A term first introduced by German mineralogists to designate a hollow nodule of any mineral substance, often lined with crystals. Thus, at Oberstein, in Saxony, hollow balls of agate were found lined with crystals of quartz or amethyst. Geodes are found more or less in all volcanic rocks; they are occasionally of large size, at other times only of small dimensions.

"Nothing except an outer wall and foss remains; in part of which is a vast stratum of ferruginous *geodes*."—*Pennant: Journey from Chester to London*, p. 402.

2. The cavity in such a natural ball.

ġĕ-ō-dĕph′-ą-gą, *s.* [Pref. *geo-* (q.v.), and Gr. ἀδηφάγος (*adēphagos*) = gluttonous, greedy.]

Entom.: One of the two leading tribes of carnivorous beetles, comprehending those which live on land as distinguished from Hydradephaga, those inhabiting water. It contains the two families of Carabidæ and Cicindelidæ (q.v.).

* **ġĕ-ō-dē′-şĭ-ąn,** *s.* [Eng. *geodesy*; *-an.*] One versed in geodesy.

ġĕ-ō-dĕs′-ĭc, ġĕ-ō-dĕs′-ĭc-ąl, *a.* [Eng. *geodes(y)*; *-ic*; *-al.*] The same as GEODETIC (q.v.).

"The first step in a *geodesic* survey consists in making a preliminary reconnoissance of the country to be surveyed."—*Davies & Peck: Math. Dict.*

* **ġĕ-ŏd′-ĕ-şist,** *s.* [Eng. *geode(y)*; *-ist.*] A geodesian.

ġĕ-ŏd′-ĕ-sȳ, *s.* [Gr. γεωδαισία (*geōdaisia*), from γῆ (*gē*) = the earth, and δαίω (*daiō*) = to divide; Fr. *géodésie.*] That branch of applied mathematics which determines, by means of observations and measurements, the figure and areas of large portions of the earth's surface, or the general figure and dimensions of the earth; that branch of surveying in which the curvature of the earth is taken into account. This becomes necessary in all extensive operations.

ġĕ-ō-dĕt′-ĭc, ġĕ-ō-dĕt′-ĭc-ąl, *a.* [Eng. *geode(sy)*; *-tic*, *-tical.*] Pertaining to geodesy; carried out or determined by means of geodesy: as, a *geodetic* survey.

geodetic-line, *s.* The shortest line on the surface of an ellipsoid which can be drawn between two points. It is a characteristic property of this line that at every point of the curve, its curvature is less than that of any other curve of the surface through that point.

ġĕ-ō-dĕt′-ĭc-ąl-lȳ, *adv.* [Eng. *geodetical*; *-ly.*] In a geodetic manner; by means of geodesy.

ġĕ-ō-dĕt′-ĭcs, *s.* [GEODETIC.] The same as GEODESY (q.v.).

ġĕ-ō-dĭf′-ĕr-oŭs, *a.* [Eng. *geod(e)*; *i* connective; Lat. *fero* = to bear, to produce, and Eng. adj. suff. *-ous.*] Producing geodes.

ġĕof-roȳ′-ą, ġĕof-fræ′-ą, ġĕof-frœ′-ą, *s.* [Named after M. E. F. Geoffroy, author of a *Materia Medica*. He died in 1731.]

Bot.: A genus of papilionaceous plants, tribe Dalbergieæ. The leaves are pinnate, the fruit in drupes instead of proper legumes. The bark of *Geoffroya vermifuga* and *G. spinosa* is anthelmintic. It has a disagreeable smell and a sweet mucilaginous taste. The effects are drastic, emetic, purgative, and narcotic; in large doses it is poisonous. (*Lindley.*)

ġĕ-ō-ġĕn′-ĭc, *a.* [GEOGONIC.]

ġĕ-ō-glŏs′-sŭm, *s.* [Pref. *geo-* (q.v.), and Gr. γλῶσσα (*glossa*) = the tongue.]

Bot.: Earth tongue. A genus of ascomycetous fungi, sub-order Elvellacei. Some are black or brown, others green or purple. They occur chiefly in Europe, on closely shaven lawns, on pastures, and sphagnous bogs. Some are eatable.

* **ġĕ-ŏg-nō′-sĭs,** *s.* [GEOGNOSY.] A knowledge of the earth.

"He has no bent towards the enlargement of our geognosis."—*G. Eliot: Middlemarch*, ch. xi.

* **ġĕ-ŏg′-nŏst,** *s.* [Gr. γεω (*geō*), for γήιος (*gēios*)) = belonging to the earth, and γνῶσις (*gnōsis*) = knowledge; Fr. *géognoste.*] One versed in geognosy; a geologist.

"The travellers have been such bad geognosts."—*C. Kingsley: Life*, ii. 141.

* **ġĕ-ŏg-nŏs′-tĭc,** *a.* [Fr. *géognostique.*] Of or pertaining to geognosy or geology; geological.

* **ġĕ-ŏg-nŏs′-tĭc-ąl,** *a.* [Eng. *geognostic*; *-al.*] The same as GEOGNOSTIC (q.v.).

* **ġĕ-ŏg′-nō-sȳ,** *s.* [Gr. γεω (*geō*), from γήιος (*gēios*) = belonging to the earth, and γνῶσις (*gnōsis*) = knowledge; γιγνώσκω (*gignōskō*) = to know; Fr. *géognosie.*]

1. *Gen.:* A term introduced by Werner to designate the science now termed geology.

2. *Spec.:* A description of the structure of the earth, as distinguished from geology, limiting the latter term to theoretical speculations regarding the processes by which it has been brought into its present state. This Sir Charles Lyell considered an unnecessary refinement of language.

ġĕ-ō-ġŏn′-ĭc, ġĕ-ō-ġŏn′-ĭ-ąl, *a.* [Eng. *geogon(y)*; *-ic*, *-ical*; Fr. *géogonique.*] Of or pertaining to geogony, or the formation of the earth.

ġĕ-ŏg′-ō-nȳ, *s.* [Gr. γεω (*geō*), for γήιος (*gēios*) = belonging to the earth, and γονή

(*gonē*) = a generation, a begetting; Fr. *géogonie.*] A name sometimes given to the science which investigates the origin of the earth; cosmogony.

ġĕ-ŏg′-ra̤-phĕr, *s.* [Eng. *geograph(y)*; *-er.*] One who is versed in geography; one who writes a treatise on geography.

"Manichæus, or Manes, who was a Chaldean or Babylonian, was born about A.D. 240, and was a learned and ingenious man, and a good astronomer and *geographer.*"—*Jortin: Remarks on Eccles. History.*

ġĕ-ô-grăph′-ĭc, ġĕ-ô-grăph′-ĭc-a̤l, *a.* [Fr. *géographique.*] Of or pertaining to geography; containing a description of the physical structure and characteristics of the globe.

"In that vast region of China, which is enriched with so fertile a soil, and compriseth such variety of *geographical* parallels."—*Boyle: Works,* ii. 104.

¶ *Royal Geographical Society:* A society for the promotion of geographical research, which originated in London in 1830, one in Paris having been founded in 1821. The abbreviation for Fellow of the Royal Geographical Society is F.R.G.S.

geographical-latitude, *s.* [LATITUDE.]

geographical-mile, *s.* [MILE.]

ġĕ-ô-grăph′-ĭc-a̤l-lȳ, *adv.* [Eng. *geographical*; *-ly.*] In a geographical manner; with reference to geographical facts or relations; like a geographer.

"Here [Homer] introduces Minerva to let Ulysses into the knowledge of his country. How does she do this? She *geographically* describes it to him."—*Pope: Homer; Odyssey,* iv. (Note by Broome.)

ġĕ-ŏg′-ra̤-phȳ, *s.* [Fr. *géographie,* from Lat. *geographia,* from Gr. γεωγραφία (*geōgraphia*), from γεω (*geō*), for γήιος (*gēios*) = belonging to the earth, and γραφία (*graphia*) = a description; γράφω (*graphō*) = to write.]

I. *Ordinary Language:*

1. In the same sense as II. 1.

2. A school or other book treating of the science described under II.

II. *Science:*

1. *Definition & divisions:* A delineation or description of the earth as it at present is, leaving it to geology to investigate how it came into its present condition. It may be divided into three distinct sciences, Mathematical or Astronomical, Physical, and Political Geography. Mathematical geography views the earth as a planet; it investigates its relations to the sun, the moon, and other bodies belonging to the solar system. It gives attention to the angle at which its axis is inclined to the ecliptic, the position of the arctic and antarctic circles and the tropics of Cancer and Capricorn, the parallels of latitude, and the meridians of longitude. Sir John E. W. Herschel declares that, theoretically speaking, geography is a part of astronomy, and he treats it as such. He refers specially to the first department of the science. Physical geography treats of the present distribution of sea and land, the currents of the ocean, the climates of the several continents and islands. With regard to the land, it commences by indicating the position of the mountain chains and table lands, thus fixing the positions of the great rivers, to which attention is next turned. Then the position of the alluvial plains, the deserts, &c., is pointed out; the distribution of the plants over the surface of the earth, often called botanical geography, follows next; then that of the animals; and finally that of the several races of mankind. This branch of the science approaches those of geology, hydrology, meteorology, botany, zoology, and ethnology or anthropology. Finally, there follows political geography, which treats of the present distribution of political power over the world, the position and resources of the several empires, kingdoms, republics, &c., their populations and wealth, the capitals, other large cities, and the more thinly inhabited agricultural parts. This branch of the subject approaches the confines of history, the limits of almost every state not arising from the colonization of a new region, but, in the majority of instances, having been determined by the results of former battles.

2. *Hist. of Geog.:* Eratosthenes, B.C. 240, was one of the earliest ancient geographers of eminence; but the greatest names in this department were Strabo—who lived during the reigns of Augustus and Tiberius—and Ptolemy, who flourished about A.D. 139. The discovery of the passage round the Cape of Good Hope and that of America in the fifteenth century, gave a great impulse to its modern advance. The first Geographical Society formed in modern times was that of Paris in 1821; the Royal Geographical Society of London followed in 1830, and is now in a flourishing state. A geographical congress was held at Paris in 1875.

"I now live in the house with a child, whom his mother has so well instructed this way in *geography,* that he knew the limits of the four parts of the world, could readily point, being asked, to any country upon the globe, or any county in the map of England; knew all the great rivers, promontories, straits, and bays in the world, and could find the longitude and latitude of any place, before he was six years old."—*Locke: On Education,* § 178.

* **ġĕ-ŏl′-a̤-trȳ,** *s.* [Gr. γεω (*geō*), for γήιος (*gēios*), from γῆ (*gē*) = the earth, and λατρεία (*latreia*) = worship.] The worship of the earth.

"To this succeeded astrology in the East, and *geolatry* in the West."—*Cox: Mythol. of Aryan Nations,* i. 95.

* **ġĕ-ŏl′-ô-ġẽr,** *s.* [Eng. *geolog(y)*; *-er.*] A geologist (q.v.).

* **ġĕ-ô-lō′-ġĭ-a̤n,** *s.* [Eng. *geology*; *-an.*] A geologist (q.v.).

ġĕ-ô-lŏġ′-ĭc-a̤l, * **ġĕ-ô-lŏġ′-ĭc,** *a.* [Fr. *géologique.*] [GEOLOGY.] Of or pertaining to geology, or the science of the earth.

¶ *Geological Society of London:* A society formed in London in 1807, and to a certain extent an offshoot from the Royal Society of London. It has since done noble work for its special science, and at the end of 1882 had 1,360 ordinary, three honorary, and four foreign members, with thirty-nine foreign correspondents, in all 1,441. For many years publishing quarto *Transactions,* it in 1845 adopted the octavo size for the *Quarterly Journal of the Geological Society,* commenced in that year, and of which now (Dec., 1883), the thirty-ninth annual volume is nearly completed. The abbreviation for Fellow of the Geological Society is F.G.S. Many other Geological Societies exist: as, that of France, founded in 1830; that of Dublin in 1832, and that of Edinburgh in 1834.

geological-map, *s.* [MAP.]

geological-survey, *s.* [SURVEY.]

ġĕ-ô-lŏġ′-ĭc-a̤l-lȳ, *adv.* [Eng. *geological*; *-ly.*] In a geological manner; according to geology.

ġĕ-ŏl′-ô-ġĭst, *s.* [Fr. *géologiste.*] [GEOLOGY.] One versed in the science of geology.

ġĕ-ŏl′-ô-ġīze, *v.i.* [Eng. *geolog(y)*; *-ize.*] To study geology; to make geological investigations; to discourse as a geologist.

ġĕ-ŏl′-ô-ġȳ, *s.* [Fr. *géologie,* from Gr. γεω (*geō*), for γήιος (*gēios*) = belonging to the earth; γῆ (*gē*) = the earth, and λόγος (*logos*) = a discourse.]

1. The science which investigates the bygone history of the earth with the view of accounting for its present condition. It inquires into the successive changes which have taken place in the organic and inorganic kingdoms of nature, seeks out the causes of these changes, and traces the influence which they have exerted in modifying the surface and the external appearance of the earth. It is the province of physical and political geography to describe what the earth now is, geology attempts to furnish the reason why.

(1) *Hist. of Geology:* Though it is only during the present century that geology has started up into the vigour of manhood, yet its birth took place ages ago. Isolated geological observations or hypotheses occur abundantly in ancient literature. "As for the earth, out of it cometh bread; and under it is turned up as it were fire" (Job xxviii. 5); an anticipation of the Huttonian hypothesis. Egypt, according to Herodotus, is the gift of the Nile, that is, the river brought down the silt which constitutes the fertile soil of the Delta and other parts of Lower Egypt. Though there is a mixture of erroneous hypotheses in the statements attributed to Pythagoras, in Ovid's *Metamorphoses,* bk. xv., other parts would have done no discredit to Sir Charles Lyell. Pythagoras himself lived, it is thought, about 580 B.C., but the views handed down by Ovid were probably those of Pythagoreans in the Augustan age rather than those of Pythagoras. The best geologist of antiquity was the geographer Strabo, who lived in the first century A.D. For the long controversy regarding the nature of fossils, and if they were organic when they were entombed, see Fossil. Modern geology began with Werner, who was a Professor in the School of Mines, at Freyberg, in Saxony, in 1775. He believed that a series of universal formations had been deposited in succession from a chaotic fluid. Basalt was supposed to have had the same origin, but to this view various continental observers were opposed. The controversy spreading to this country, Hutton, an Edinburgh physician, published in 1788 his *Theory of the Earth,* developed in a separate work in 1795. He assumed no causes but those now existing. He showed that geology and cosmogony were different. "In the economy of the world," he said, "he could find no trace of a beginning, no prospect of an end." He held basalt, granite, &c., to be of igneous origin. The Wesnerians were called Neptunists, their opponents Vulcanists. In 1790 Mr. William Smith, an English surveyor, published his *Tabular View of the British Strata,* and in 1815 his *Geological Map of England.* In 1798 Cuvier published his *Ossemens Fossiles,* which gave a great impulse to palæontology. [(2).]

(2) *The forces or causes in operation:* After inquirers had outgrown the belief in fossils produced by the plastic power of nature or all entombed simultaneously by the Noachian deluge, the belief was entertained that there had been a series of creations and catastrophes, the latter causing the universal destruction of all pre-existing species. The belief was also entertained that some external causes, say the forces producing earthquake and volcanic action, were more potent in former times than now. This Prof. Huxley calls Catastrophism, which he defines to be any form of geological speculation which, in order to account for the phenomena, supposes the operation of forces different in their nature or immeasurably different in power from those which are at present in action in the universe. Sir Roderick Murchison was of this school, with many continental geologists.

The second school of geology is that called by Huxley Uniformitarianism. This looks only to causes now in operation for the explanation of geological phenomena. Of this school, pre-eminently a British one, Hutton was the founder, though it was Sir Charles Lyell that carried it forward to triumph. He showed the enormous changes which the causes now in operation are still producing, and that nearly every phenomenon, attributed to abnormally potent causes acting suddenly and briefly, could be produced by causes not more intense than those in action now, but operating through immense periods of bygone time. In his *Principles of Geology,* he examines aqueous causes, the action of water acting in connection with tides, currents, &c., in seas, rivers, and lakes, also the action of ice in all its forms. Next he inquires into igneous causes, volcanos, and earthquakes. Climate and organic life are also carefully investigated in the work.

The doctrine of the third school of geologists is called by Prof. Huxley Evolutionism; it accepts nearly the whole of Uniformitarianism, except the part referring to the development of organic life. In his later years Sir Chas. Lyell became an evolutionist. [DARWINISM, EVOLUTION, &c.]

(3) *Geologic time:* Both the uniformitarian and the evolutionist believe that they may draw to any extent on what be called the bank of time, which will be found "ready to discount any quantity of hypothetical paper." Sir Wm. Thomson holds that any such drafts must be limited "within some such period of time as one hundred millions of years;" and another natural philosopher considers the time at call only about sixty millions of years. Prof. Huxley believes the necessity for these limitations is not proved, though perhaps one, two, or three hundred millions of years might be enough to account for geological phenomena.

With regard to the subdivision of the time, long or short, at the geologist's command, the sedimentary strata having been laid down by water, the relative thickness of each stratum will measure the proportion of geologic time required for its deposition. Prof. Ramsay, in *Quar. Jour. Geol. Soc.,* xvi. (1860),

pp. 50–52, estimated the thickness of the British strata as follows :—

Strata.	Thickness.	Percentage of Geological Time.
Cainozoic or Tertiary Rocks	2,240	3
Mesozoic or Secondary Rocks	13,190	18
Palæozoic or Primary Rocks	57,154	79
	72,584	100

In 1869 Prof. Huxley stated that it would be a full allowance for the total thickness of the stratified rocks containing traces of life to estimate them at 100,000 feet, but does not give any subdivisions. (*Quar. Jour. Geol. Soc.*, xxv. (1869), p. 48.)

(4) *Geologic strata:* For a list of these, see FORMATION; see also METAMORPHIC ROCKS.

(5) *Other rocks:* For these, see IGNEOUS ROCKS, VOLCANIC ROCKS.

(6) *Fossils:* For these, see FOSSILS; see also PALÆONTOLOGY.

(7) *Applied geology:* Geology applied to industrial or other practical purposes; as, for instance, to mining, drainage, railway tunnelling, &c.

***ġē′-ō-măn-çĕr,** *s.* [GEOMANCY.] A diviner or fortune-teller by means of geomancy.

"Fortune-tellers, jugglers, *geomancers*, and the incantatory impostors, daily delude the vulgar."—*Browne: Vulgar Errours*, bk. i., ch. iii.

***ġē′-ō-măn-çy,** ***ge-o-man-cie,** ***ge-o-man-cye,** ***ge-o-maun-ce,** *s.* [Fr. *géomance, géomancie*, from Gr. γεω (*geō*), for γῆιος (*gēios*) = belonging to the earth, and μαντεία (*manteia*) = prophecy, divination; Sp. & Port. *geomancía.*] A kind of divination by means of lines formed by little dots or points, originally on the earth, and subsequently on paper, &c.

"He taught them there openlye bothe in Latine and Greke, beside the art Magyck, Sortilege, Phisnomy, Palmestry, Alcumy, *Geomancy*, and Witchery, that was taughte there also."—*Bale: Votaries*, pt. i.

***ġĕ-ō-măn′-tĭc,** ***gĕ-ō-măn-tĭck,** ***ġĕ-ō-măn′-tĭc-ăl,** *a.* [Fr. *géomantique.*] Of or pertaining to geomancy.

"Two *geomantic* figures were displayed
Above his head, a warrior and a maid."
Dryden: Palamon & Arcite, ii. 614.

***ġĕ-ō-măn′-tĭc-ăl-lȳ,** *adv.* [Eng. *geomantical; -ly.*] In a geomantic manner; by means of geomancy.

***ġĕ-ō-măn′-tȳ,** *s.* [GEOMANCY.]

ġĕ-ŏm′-ĕ-tĕr, *s.* [Fr. *géomètre*, from Gr. γεωμέτρης (*geōmetrēs*): γῆ (*gē*) = the earth, and μετρῶ (*metrō*) = to measure.]

I. *Ord. Lang.:* One versed in geometry; a geometrician. (*Boyle: Works*, ii. 473.)

* II. *Entom.:* The name sometimes given to moths of the group Geometrina (q.v.).

***ġĕ-ŏm′-ĕ-trăl,** *a.* [Fr. *géometral.*] Pertaining to geometry; geometrical.

ġĕ-ō-mĕt′-rĭc, **ġĕ-ō-mĕt′-rĭc-ăl,** *a.* [Fr. *géométrique*, from Gr. γεωμετρικός (*geōmetrikos*).] [GEOMETRY.]

1. Of or pertaining to geometry; according to the rules or principles of geometry; done or determined by geometry.

"Surveying a place, according to my idea, is taking a *geometrical* plan of it."—*Cook: Second Voyage*, bk. iii., ch. vii.

2. Prescribed or laid down by geometry.

"The dimensions of his glorious face
Two *geometrick* feet do scarce surpass."
Blackmore: Creation.

3. Disposed in geometric figures.

"*Geometrick* jasper seemeth of affinity with the *lapis sanguinalis* described by Boetius."—*Grew: Museum.*

geometric-chuck, *s.* A chuck having a radial slider to which the work is attached, the slider oscillating in a plane at right angles to the axis of motion, so as to produce curved lines in various patterns, as regulated by special devices.

geometrical-construction, *s.* The operation of drawing a figure, by means of right lines and circles. The geometrical construction of an algebraic expression consists in drawing a figure such that each of its parts shall have its representative in the expression, and that the relation between them shall be the same as that between their representatives in the given expression. (*Davies & Peck.*)

geometrical-curve, *s.* The same as an ALGEBRAIC-CURVE (q.v.).

geometrical-decorated, *a.*

Arch.: A term applied to the earlier period of decorated architecture in England, in which the tracery and other ornamentation consisted of geometrical forms. [DECORATED.]

geometrical-drawing, *s.* Drawing with instruments, as opposed to freehand drawing.

geometrical-elevation, *s.*

Arch.: A design for the front or side of a building, drawn according to the rules of geometry, as distinguished from a perspective or natural elevation.

geometrical-lathe, *s.* A species of lathe used for making complicated patterns of interlacing lines to form an additional guard against the counterfeiting of bank-notes, &c. It is adapted for more delicate and minute work than the cycloidal engine.

geometrical-locus, *s.* The curve or surface in which a point or line is always found moving, in accordance with an algebraic law. [LOCUS.]

geometrical-pace, *s.* A measure of five feet.

geometrical-pen, *s.* An instrument for drawing geometrical curves, in which the movements of a pen or pencil attached to a revolving arm of adjustable length are varied by changing the toothed wheels which give motion to the arm.

geometrical-plane, *s.* The same as GROUND-PLANE (q.v.).

geometrical-progression, *s.* A progression or series in which the terms increase or decrease by a common ratio or proportion, as, 1, 3, 9, 27, 81; 144, 36, 9, $\frac{9}{4}$, $\frac{9}{16}$, $\frac{9}{64}$, &c. [PROGRESSION.]

geometric-radius, *s.*

Gear.: The radius of the pitch circle of a cog-wheel. The real radius is that touching the crests of the teeth.

geometrical-solution, *s.* A solution of a problem effected geometrically; that is, by the aid of the right line and circle. This rejects all solutions made by aid of the higher curves, or by approximation.

geometric-square, *s.* An instrument for measuring distances and heights, and useful for its portability as well as for the facility, by the common rule of three, of solving most of the problems arising from its use. It is made of brass or wood, twelve or eighteen inches square, and the quadrant is graduated in each direction. The two sides opposite to the axial point of the alidade are graduated to 100 equal parts, with major divisions of ten of said parts. The 100 point finishes at the angle obliquely opposite the centre from which the arc is struck. One side represents the horizon, and the alidade with two sights is equal in length to the diagonal of the square. The alidade has divisions equal to those on the sides of the square.

geometrical-stairs, *s. pl.*

Building: A flight of stone stairs where the steps are secured into the wall at one end only, the other forming a continued string with an open newel.

ġĕ-ō-mĕt′-rĭ-căl-lȳ, ***ġĕ-ō-mĕt′-rĭ-căl-lĭe,** *adv.* [Eng. *geometrical; -ly.*] In a geometrical manner; according to the rules or laws of geometry.

"Sir Christopher Wren, afterwards, in the same year, *geometrically* demonstrated the equality of some curves to a strait line."—*Derham: Physico-Theology*, bk. v., ch. i. (Note 13.)

ġĕ-ŏm-ĕ-trĭ′-cian, *s.* [Eng. *geometric; -ian.*] One versed in geometry; a geometer; a mathematician.

"The great work, which entitles him to the highest place among the *geometricians* and natural philosophers of all ages and of all nations."—*Macaulay: Hist. Eng.*, ch. viii.

ġĕ-ō-mĕt′-rĭ-dæ, *s. pl.* [Lat. *geometr(a)*; Gr. γεωμέτρης (*geōmetrēs*) = a land measurer, a geometer; Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: The typical family of the group or tribe of moths called Geometrina (q.v.). The antennæ of the male are often pectinated, the abdomen sometimes crested; the wings, green, generally entire rounded or angular; the larvæ rather elongate, stiff, often rough; the head generally bifid. Only eight species are known

ESSEX EMERALD.

to occur in Britain. Among them are the Large Emerald, the Essex Emerald, the Green Emerald, and the Blotched Emerald. (Stainton.)

ġĕ-ō-mĕt-rĭ′-nạ, *s. pl.* [Lat. *geometr(a)*, and neut. pl. adj. suff. *-ina.*] [GEOMETRIDÆ.]

Entom.: A group or tribe of moths. The antennæ are setaceous, frequently ciliated or pectinated; they are longer than the thorax. The body is generally slender; the wings broad, the posterior pair generally brightly coloured and exposed to view when the insect is at rest. The larvæ have, as a rule, only two legs, hence they have to form a loop when they walk. There are 282 British species known, many of them gaily marked, some being of small size. The group contains seventeen families :—

(1) Ourapterydæ, (2) Ennomidæ, (3) Amphidasydæ, (4) Boarmidæ, (5) Boletobidæ, (6) Geometridæ, (7) Boarmiidæ, (8) Acidalidæ, (9) Caberidæ, (10) Remiridæ, (11) Fidoniidæ, (12) Zerenidæ, (13) Ligidæ, (14) Eylenidæ, (15) Larentidæ, (16) Eubolidæ, and (17) Sterrhidæ. (*Stainton.*)

***ġĕ-ŏm′-ĕ-trīze,** *v.t.* [Eng. *geometr(y); -ize.*] To act according to the rules or laws of geometry; to proceed geometrically; to organize or apprehend geometrical quantities or laws.

"Nature *geometrizeth*, and observeth order in all things."—*Browne: Cyrus' Garden*, ch. iii.

ġĕ-ŏm′-ĕ-trȳ, ***ġĕ-ŏm′-ĕ-trie,** *s.* [Fr. *géométrie*, from Lat. *geometria*, from Gr. γεωμετρία (*geōmetria*) = the measurement of land: γεω (*geō*), for γῆιος (*gēios*) = belonging to the earth, and μετρία (*metria*) = measurement; μετρέω (*metreō*) = to measure; μέτρον (*metron*) = a measure.] Properly the measurement of the earth or of land, but now used exclusively of the abstract science to which practical land measurement gave or may have given birth. It is the science of space, whether linear, superficial, or solid.

1. *Hist. of Geometry:* Who first invented or cultivated geometry is uncertain. The Hindoos have a geometry apparently of indigenous growth. Some knowledge of geometry was apparently possessed by the builders of the Egyptian pyramids. Diodorus and others attribute the invention or discovery of geometry to Egypt, which is doubtful. The Greeks surpassed all ancient nations in the attainments in the science. Euclid founded a school of mathematics at Alexandria some time in the reign of Ptolemy Lagus, B.C. 323 to 283. His *Elements* are still in use in many schools and colleges. [MATHEMATICS.]

2. *Nature of the Science:* Geometry, like mathematics, is built up on rigorous demonstration. To prevent the possibility of error in reasoning it is needful to commence with definitions of the terms employed. Thus we follow in Euclid's *Elements* postulates or concessions demanded as to what is possible to be done; then axioms, simple mathematical statements worthy of being believed. A popular belief is that the whole science of geometry rests upon the axioms: it is really, however, based on the definitions; thus the whole first book of Euclid follows naturally from the definition of a circle.

¶ (1) *Analytical Geometry:* The analytic investigation of the relations and properties of geometrical magnitudes. It is divided into Determinate and Indeterminate Geometry according as the number of possible solutions in any given case is limited or unlimited.

(2) *Descriptive Geometry:* Geometry of which the feature is to represent solid bodies with accurate form, perspective, &c., on paper or other plane surface.

(3) *Determinate Geometry:* [¶ (1)].

(4) *Elementary Geometry:* Geometry treating of points, lines, surfaces, or the ordinary solids as distinguished from Conic Sections, &c., called the Higher Geometry.

(5) *Higher Geometry:* [¶ (4)].

(6) *Indeterminate Geometry:* [¶ (1)].

(7) *Plane Geometry:* Geometry relating to surfaces, or to lines drawn or points placed upon them.

(8) *Solid Geometry:* Geometry relating to solids.

* ¶ *To hang by geometry:* To hang or be out of shape or in confusion.

gĕ-ō-mўr'-ĭ-cīte, *s.* [Gr. γεω (*geō*) for γήιος (*gēios*) = belonging to the land, and μυρίκη (*murikē*) = a shrub, the tamarisk.] [Myrica.]

Min.: A waxy, pulverulent mineral, consisting of carbon 80·59, hydrogen 13·42, and oxygen 5·99 = 100. It occurs in the brown coal deposit at Gesterwitz. The wax may have been derived from fossil trees. (*Dana.*)

gĕ-ō-năv-ĭ-gā'-tion, *s.* [Gr. γεω (*geō*), for γήιος (*gēios*) = belonging to the land, and Eng. *navigation* (q.v.).] A term proposed for that branch of the science of navigation in which the position of a ship at sea is determined by reference to some other spot on the surface of the earth. Opposed to Cœlo-navigation (q.v.).

gĕ-ŏn'-ō-mў, *s.* [Gr. γεω (*geō*), for γήιος (*gēios*) = belonging to the earth, and νόμος (*nomos*) = a law.] The science of the physical laws relating to the earth, as geology and physical geography.

gĕ-ŏph'-a-ġĭşm, *s.* [Gr. γῆ (*gē*) = the earth, and φαγεῖν (*phagein*) = to eat.] The act or habit of eating earth, as dirt, clay, &c. [Dirt-eating.]

gĕ-ŏph'-a-ġĭst, *s.* [Geophagism.] One who practises geophagism; one who eats dirt.

gĕ-ŏph'-a-ġў, *s.* [Gr. γῆ (*gē*) = the earth, and φαγεῖν (*phagein*) = to eat.] The same as Geophagism (q.v.).

"*Geophagy*—dirt or earth-eating—fatal generally, by dysentery or dropsy."—*Lindsay: Mind in the Lower Animals*, i. 40.

gĕ-ŏph'-ĭ-la, *s.* [Gr. γεω (*geō*) for γήιος (*geios*) = belonging to the land, and φιλέω (*phileō*) = to love.] So named from the creeping habit of the plants.]

Bot.: A genus of Cinchonaceæ, tribe Coffeæ, family Psychotridæ. The species are found in tropical America and the East Indies. The root of *Geophila reniformis* is purgative or emetic.

gĕ-ō-phĭl'-ĭ-dæ, *s. pl.* [Mod. Lat. *geophil(us)*, and Lat. fem. adj. pl. suff. *-idæ.*]

Zool.: A family of Centipedes, order Chilognatha. The body is very slender and thread-like, with many segments, and a corresponding number of pairs of feet.

gĕ-ŏph'-ĭ-lŭs, *s.* [Geophila.]

1. *Zool.:* The typical genus of the family Geophilidæ (q.v.). *Geophilus electricus* is found near London and elsewhere. It is sometimes seen upon the doorsteps of country houses. When excited it emits an electric light.

2. *Palæont.:* Count Munster has described a centipede, called by him *Geophilus proavus*, from the lithographic slates of Solenhofen, which belong to the Upper Jurassic rocks.

* **gĕ-ō-pŏn'-ĭc**, *a. & s.* [Fr. *géoponique*, from Gr. γῆ (*gē*) = the earth, and πονικός (*ponikos*) = toilsome; πόνος (*ponos*) = labour.]

A. *As adj.:* Pertaining to agriculture or the tillage of the earth.

B. *As substantive:*

1. An agriculturist, a farmer.

"[It] freely receives the wholesome blasts of the North wind (much accounted of among builders and *geoponics* for immission of pure air)."—*Drayton: Poly-Olbion*, s. 10. (Note.)

2. (*Pl.*): The art or science of tilling the earth; agriculture.

"Herbs and wholesome sallets, and other plain and useful parts of *geoponics*."—*Evelyn: Sylva.*

* **gĕ-ō-pŏn'-ĭc-al**, *a.* [Eng. *geoponic*; *-al.*] Of or pertaining to agriculture or the tillage of the earth; geoponic.

"Those *geoponical* rules and precepts of agriculture which are delivered by divers authors."—*Browne: Vulgar Errours*, bk. vi., ch. iii.

gĕ-ō-ra'-ma, *s.* [Gr. γεω (*geō*), for γήιος (*geios*) = belonging to the earth, and ὅραμα (*horama*) = a view; Fr. *géorama.*] A concave globe on the inside of which the countries, oceans, &c. of the earth are represented to the spectators, who stand on a framework inside.

Ġeor'-dĭe, *s.* [A Scotch dimin. of George (q.v.).] A guinea. [George, 3.]

"As lang's my tail, whare, through the steeks,
The yellow-lettered *Geordie* keeks."
Burns: The Twa Dogs.

Geordie safety-lamp, *s.*

Mining: A safety-lamp invented for use in coal mines by George Stephenson.

gĕ-ō-rĕ-tĭn'-ĭc, *a.* [Pref. *geo-*, and *retinic* (q.v.).]

Min.: Akin to retene, and derived from the earth.

georetinic-acid, *s.*

Min.: A name formerly given to Brücknerellite (q.v.).

Ġeorġe, *s.* [Lat. *Georgius*, from Gr. γεωργός (*geōrgos*) = a cultivator of the earth; γῆ (*gē*), and ἔργον (*ergon*) = work.]

1. The insignia of the order of the Garter; a figure of St. George on horseback, engaging the dragon, worn pendent from the collar by the knights of that order. [Garter, *s.*]

"The *George* and Garter dangling from that bed,
Where tawdry yellow strove with dirty red."
Pope: Moral Essays, iii. 303.

* 2. A guinea, from the figure of St. George on the reverse.

* 3. A kind of loaf, said to have been stamped with a figure of St. George.

"Cubbed in a cabin, on a mattrass laid,
On a brown *george*, with lousy swabbers fed."
Dryden: Persius, sat. v.

¶ The name Brown George is used at Oxford for the large coarse earthenware water jugs used instead of cans.

George-noble, *s.* A gold coin, current at six shillings and eight pence in the reign of Henry VIII: so called from the figure of St. George on the reverse.

Ġeor'-ġĭ-an, *s.* [See def.] A native or inhabitant of Georgia, a region on the south of the Caucasus, or of Georgia, one of the southern states of the American Union.

Ġeor'-ġĭ-an, *a.* [Lat. *Georgius* = George.] Belonging or relating to the reigns of the four Georges in Great Britain, 1714–1830: as, the *Georgian* era.

"One *Georgian* star adorns the skies,
She myriads found below."
Cowper: Queen's Visit, March 17, 1789.

ġeor'-ġĭc, * **ġeor'-ġĭck**, *a. & s.* [Lat. *georgica* (*carmina*) = georgic (poems), from *georgicus* = relating to husbandry; Gr. γεωργικός (*geōrgikos*), from γεωργία (*geōrgia*) = husbandry: γῆ (*gē*) = the earth, and ἔργον (*ergon*) = work.]

A. *As adj.:* Pertaining or relating to agriculture or husbandry; treating of rural affairs.

"Here I peruse the Mantuan's *georgic* strains,
And learn the labours of Italian swains."
Gay: Rural Sports, i.

B. *As subst.:* A poem on husbandry or rural affairs. It is the title of four books on husbandry written by Virgil.

"A *georgic*, therefore, is some parts of the science of husbandry put into a pleasing dress, and set off with all the beauties and embellishments of poetry."—*Addison: On Virgil's Georgics.*

* **ġeor'-ġĭc-al**, *a.* [Eng. *georgic*; *-al.*] The same as Georgic (q.v.).

Ġeor'-ġĭ-ŭm Sī'-dŭs, *s.* [Lat., = the Georgian star, i.e., the star discovered under the auspices of King George III. of England.]

Astron.: The name given by Sir William Herschel to a planet discovered by him on March 13, 1781. Laplace, disliking the innovation of elevating one's sovereign to the sky, substituted for the name of King George that of the planet's discoverer, Herschel. The latter appellation is still widely accepted, but as the other planets were all called by the names of classic gods, Bode suggested the appellation of Uranus (q.v.). See also Herschel.

* **gĕ-or'-gŏs**, *s.* [Gr.; see Georgic.] A husbandman. (*Spenser.*)

gĕ-ō-rhў'-chĭ-dæ, *s. pl.* [Mod. Lat. *georhych(us)* (q.v.); Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: Mole-rats; a family of Rodentia, with a large head, small eyes and ears, a short or deficient tail, and five toes on each foot. They occur in Asia, Africa, and South-Eastern Europe, burrowing like moles.

gĕ-ō-rhў'-chŭs, *s.* [Gr. γεωρύχος (*geōrhuchos*) = digging or throwing up the earth: γῆ (*gē*) = the earth, and ὀρύσσω (*orussō*) = to dig.]

Zool.: The typical genus of the family Georchychidæ (q.v.). *Georhychus capensis* does damage to gardens at the Cape of Good Hope.

ġĕ-ō-rўs'-sĭ-dæ, *s. pl.* [Mod. Lat. *georyssus*, and Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: A family of beetles, tribe Clavicornes. The body is short, inflated, and nearly globular. The tarsi appear to have only four articulations. The antennæ have nine joints, the last three forming a knob.

ġĕ-ō-rўs'-sŭs, **ġĕ-ō-rĭs'-sŭs**, *s.* [Gr. γεω (*geō*) for γήιος (*gēios*) = belonging to the land, and ὀρύσσω (*orussō*) = to dig.]

Entom.: The typical genus of the family Georyssidæ (q.v.). The only British species of the family is *Georyssus pygmæus.*

ġĕ-ō-sâur'-ŭs, *s.* [Gr. γεω (*geō*) for γήιος (*gēios*) = belonging to the land, and σαύρα (*saura*), σαῦρος (*sauros*) = a lizard.]

Palæont.: The remains of a reptile which, if entire, would probably have been nine or ten feet long. They were found by Sœmmering in white lias, at Monheim in Franconia, and are now in the British Museum. Sœmmering called the animal *Lacerta gigantea.* Cuvier believed it intermediate between the Crocodiles and Monitors, but most nearly allied to the latter. It does not figure in Professor Huxley's enumeration of Crocodilian genera.

* **ġĕ-ŏs'-cō-pў**, *s.* [Gr. γεω (*geō*), for γήιος (*gēios*) = belonging to the earth, and σκοπέω (*skopeō*) = to see.] Knowledge of the earth; ground or soil gained by inspection.

ġĕ-ō-sĕ-lĕn'-ĭc, *a.* [Gr. γεω (*geō*), for γήιος (*gēios*) = belonging to the earth, and σελήνη (*selēnē*) = the moon.] Pertaining or relating to the earth and the moon, with reference to their joint action or mutal relations.

ġĕ-ō-stăt'-ĭc, *a.* [Gr. γεω (*geō*), for γήιος (*gēios*) = belonging to the earth, and Eng. *static* (q.v.).] Sustaining the earth. (Used only in the compound.)

geostatic-arch, *s.*

Arch.: A linear arch of a figure suited to sustain a pressure similar to that of the earth, which consists, in a given vertical plane, of a pair of conjugate pressures, one vertical and proportional to the depth below a given plane, horizontal or sloping; and the other parallel to the horizontal or sloping plane, and bearing to the vertical pressure a certain constant ratio depending on the nature of the material.

* **ġĕ-ō-tĕc-tŏn'-ĭc**, *a.* [Gr. γεω (*geō*), for γήιος (*gēios*) = belonging to the earth, and τεκτονικός (*tektonikos*) = pertaining to building.] Pertaining to the construction of the earth.

"The fourth book deals with the architecture of the earth's crust, or what may be called *geotectonic* geology."—*Athenæum*, Oct. 28, 1882.

* **geoter**, *s.* [A.S. *geotere.*] One who pours out; a caster.

"A queynte mon, a metal *geoter.*"
Alisaunder, 6,735.

ġĕ-ō-teū'-thĭs, *s.* [Gr. γεω (*geō*) for γήιος (*gēios*) = belonging to the earth, and τευθίς (*teuthis*) = a kind of cuttle-fish or squid.]

Palæont.: A genus of Teuthidæ from the Upper Lias.

ġĕ-ō-thĕr'-mĭc, *a.* [Gr. γεω (*geō*), for γήιος (*gēios*) = belonging to the earth, and Eng. *thermic* (q.v.).] Of or relating to the internal temperature of the earth.

ġĕ-ō-thĕr-mŏm'-ĕ-tĕr, *s.* [Gr. γεω (*geō*), for γήιος (*gēios*) = belonging to the earth, and Eng. *thermometer* (q.v.).] An instrument for measuring the earth's heat at different depths, as in mines and wells. The temperature rises about 1° F. for every seventy or eighty feet of descent.

* **ġĕ-ŏt'-ĭc**, *a.* [Gr. γῆ (*gē*) = the earth.] Belonging to earth; terrestrial. (*Bailey.*)

ġĕ-ō-trŏp'-ĭc, *a.* [Gr. γεω (*geō*) for γήιος (*gēios*) = belonging to the land, and τρόπος (*tropos*) = a turn, a direction, or τρόπη (*tropē*) = a turn, turning about; τρέπω (*trepō*) = to turn.]

Bot. (*Of a plant*): Turning towards the earth; manifesting geotropism.

ġĕ-ŏt'-rō-pĭşm, *s.* [Gr. γεω (*geō*) for γήιος (*geios*) = belonging to the land, and τρόπος (*tropos*), or τρόπη (*tropē*), and Eng. &c. suff. *-ism.*] [Geotropic.]

Bot.: The tendency exhibited by a young plant to turn towards the earth, i.e., to direct its roots in that direction, whilst heliotropism, or a tendency to turn towards the sun, is manifested by the stem and leaves.

"Positive *geotropism*, or bending towards the centre of the earth, will be called by us *geotropism*."—*Darwin: Movements of Plants*, p. 5.

ġĕ-ô-trû′-pēş, *s.* [Gr. γεω (*geō*) for γήϊος (*gēios*) = belonging to the earth, and τρυπάω (*trupaō*) = to bore.]

Entom.: The typical genus of the family Geotrupidæ (q.v.) *Geotrupes stercorarius* is the Drone-beetle of England, which so often flies abroad on summer evenings.

ġĕ-ô-trû′-pĭ-dæ, *s.* [Mod. Lat. *geotrup(es)* (q.v.), and Lat. fem. pl. adj. suff. *-idæ*.]

Entom.: Drone scarabs; a family of Lamellicorn beetles, differing from the typical Scarabeidæ in their corneous mandibles. They mostly frequent dung, or the fungi called Boleti. [GEOTRUPES.]

ġĕ-ô-trû-pī′-næ, *s. pl.* [Mod. Lat. *geotrup(es)* (q.v.), and Lat. fem. pl. adj. suff. *-inæ*.]

Entom.: The name given by Macleay, Swainson, &c., to a sub-family of Scarabeidæ, identical with the family Geotrupidæ (q.v.).

ġĕ-phȳ′-rĕ-a, *s.* [Gr. γέφυρα (*gephura*) = a dam, mound, or mole; a bridge; a tunnel, and Lat. neut. pl. adj. suff. *-ea*.]

Zool.: Spoon-worms; a class of annulose animals, division Anarthrapoda. It consists of long worm-like marine animals indistinctly annulated, but not divided into segments. There are occasionally bristles, but no other locomotive appendages. The sexes are generally separate, and there is a metamorphosis.

* **ger,** *v.t.* [GAR.]

gĕr′-ah, *s.* [Heb. גֵּרָה (*gerah*) = (1) summation, (2) a grain, a bean, (3) the weight and money described in the definition.]

1. *Heb. money:* The smallest piece of money, being the twentieth part of a shekel. This would be about three half-pence. Gesenius thinks that the gerah was not a coin, but was reckoned by means of the beans [etym.] of the Carob tree, *Ceratonia siliqua*. [CAROB.]

"A shekel is twenty *gerahs*."—*Exod.* xxx. 13.

Cf. also Lev. xvii. 25; Num. iii. 47, xviii. 16.

2. *Heb. weights:* A weight corresponding to No. 1.

ġĕr-ā-nĭ-ā′-çĕ-æ, *s. pl.* [Lat. *gerani(um)*, and fem. adj. pl. suff. *-acea*.]

Bot.: The typical order of the alliance Geraniales. It consists of herbaceous plants or shrubs with tumid stems, separable at the joints. Leaves either opposite or alternate; if the latter, then they are opposite the peduncles. Stipules membranous; flowers white, red, yellow, or purple; sepals five, persistent, ribbed, unequal, one of them somtimes saccate, spurred at the base; petals five, or by abortion four; unguiculate stamens, generally monadelphous, twice or thrice as many as the petals; ovary with five carpels, ultimately forming five one-seeded cells; styles five, cohering round the torus, from which they are separable. Sixteen genera and about 750 species are known. They are found in temperate or hot climates, rarely in the arctic regions. They are often astringent and aromatic, abounding in vegetable oil. Lindley in his *Vegetable Kingdom*, made Oxalidaceæ and Balsaminaceæ distinct orders from Geraniaceæ. Sir Joseph Hooker merges them in it, dividing it into three tribes, Geranieæ, Oxalideæ, and Balsamineæ.

ġĕ-rā′-nĭ-al, *a.* [Mod. Lat. *geraniales* (q.v.).]

Bot.: Akin to Geranium, having for their type *Geranium*.

geranial-alliance, *s.*

Bot.: The same as GERANIALES (q.v.).

ġĕ-rā-nĭ-ā′-lēş, *s. pl.* [Lat. *gerani(um)*, and masc. or fem. pl. adj. suff. *-ales*.]

Bot.: An alliance of hypogynous exogens, with monodichlamydeous, symmetrical flowers, axile placentæ, an imbricated calyx, a twisted corolla, definite stamens, and an embryo with little or no albumen. Lindley includes under it Linaceæ, Chlenaceæ, Oxalidaceæ, Balsaminaceæ, and Geraniaceæ (q.v.).

ġĕ-rā′-nĭ-ĕ-æ, *s. pl.* [Lat. *gerani(um)*, and fem. pl. adj. suff. *-eæ*.]

Bot.: A tribe of Geraniaceæ, when the fuller term is used to comprehend not merely the geraniums, but the balsams, and the wood-sorrels. Its characters are the same as those given above to Geraniaceæ (q.v.).

ġĕ-rā′-nĭ-ēne, *s.* [Eng., &c. *gerani(um)*; *-ene* (*Chem.*).]

Chem.: A terpene, $C_{10}H_{16}$, obtained by the action of phosphorus pentoxide P_2O_5 on geraniol. It is a liquid, boiling at 164°, and smells like fresh mulberries. It oxidizes rapidly in the air. It unites with HC, forming a liquid compound.

ġĕ-rā′-nĭ-ŏl, *s.* [Eng., &c. *gerani(um)*, and Lat. *ol(eum)* = oil.]

Chem.: $C_{10}H_{18}O$. Obtained by fractional distillation of geranium oil. A colourless, strongly refracting liquid, boiling at 233°. It is insoluble in water, soluble in alcohol and ether; when fused with potash it yields isovalerianic acid; by the action of nitric acid, it is converted into nitrobenzene, oxalic acid, and other substances.

ġĕr-ā′-nĭ-ŭm, *s.* [Lat. *geranium* and *geranion* = Gr. γεράνιον (*geranion*) = the plant Cranesbill, from γέρανος (*geranos*) = a crane. Pliny makes Geranion a group of plants, including three types, probably Myrrhis, Erodium, and Geranium (q.v.).]

I. *Ordinary Language:*

1. A term most frequently applied to any of the cultivated Pelargoniums. These belong to the Geraniaceæ, but are not the typical genus.

2. A book name, and partly a popular one, for the genus Geranium. [II.]

II. *Bot.:* The typical genus of the order Geraniaceæ and the alliance Geraniales. The flowers are regular, on one or two-flowered axillary peduncles; the stamens are ten, free or connate at the base, and hypogynous. Eleven species are wild in Britain. (1) *Geranium Sanguineum* is a perennial plant with one-flowered peduncles. It is found in dry rocky places, on sandy shores, and on mountains. (2), (3), (4), *G. sylvaticum*, *G. pratense*, and *G. pyrenaicum* are perennial, with two-flowered peduncles; all the rest are annuals or biennials, also with two-flowered peduncles. They

No. (10) is called also Herb Robert. No. (2) is an ornament of Scottish woods and plantations; No. (5) is No. (10) occurs not unfrequently on waste places and hedge-banks, and has acquired celebrity in North Wales as a remedy for nephritic complaints. The root of geranium contains more tannin than quino does, and is a very powerful astringent. Bigelow considers it specially valuable in the treatment of diseases continued through debility, after their existing cause has been removed. The tubers of *G. parviflorum* are eaten in Van Diemen's Land, where it is called the Native Carrot.

¶ Indian Geranium is the name given by perfumers to *Andropogon Nardus*; and the Nettle geranium is *Coleus fruticosus*.

germ-cell, *s.*

Bot. Physiol.: An oosphere, a female cell, a cell which cannot give rise to a new plant unless the power to do so be imparted to it by another cell standing to it in a relation of contrast.

germ-epithelium, *s.*

Anat.: Epithelium existing in the ovary, and having a certain relation to the origin of the ova.

germ-theory, *s.*

1. *Biol.:* [BIOGENESIS].

2. *Pathol.:* The theory that there exists for each definite disease of infectious origin a specific germ or protomycetes. Hauptmann, in the seventeenth century, suggested that epidemic diseases might be caused by the presence in the air of invisible germs, and since then many more or less plausible efforts have been made to explain the phenomena of contagion. In 1863, Dr. Beale advanced the theory that the active properties of vaccine lymph were contained in certain minute particles $\frac{1}{25000}$ inch in diameter, a theory which has since been shown to be correct. Dr. Braidwood and Mr. Vacher describe the contagion of measles as "sparkling, colourless bodies in the breath of patients," and Dr. Klein, in typhoid fever, has found minute organisms surrounding the affected intestinal glands. The blood of animals dead from splenic fever swarms with bacilli, which multiply and throw off spores that can be cultivated (as shown by the researches of Pasteur), and the crop continued from fluid to fluid. After seven or eight such crops, a rabbit or guinea-pig inoculated with the artificially developed contagium, dies from the same disease as the animal from which the contagion-germ was taken. It has long been known that tuberculosis was hereditary, but it was supposed to be non-infectious. The tubercular bacillus has been discovered. Koch has cultivated it, and communicated it to animals, in whose bodies it has been found after death. [PROTOMYCETES, LISTERISM.]

* **ġĕr'-mĕn,** * **ger-maine,** * **ger-min,** *s.* [Lat. *germen* = a sprout, a shoot.] A germ, a sprout, a shoot, a seed.

Bot.: The name given by Linnæus to the ovary of a plant.

ġĕr'-mĭn-ạl, *a. & s.* [Fr., from Lat. *germen* (genit. *germinis*) = a germ, a shoot.]

A. *As adj.:* Of or pertaining to a germ or seed-bud.

B. *As subst.:* The name given in October, 1793, by the French Convention to the seventh month of the republican year. It commenced on March 21, and was the first spring month.

germinal-macula, *s.*

Anat. & Physiol.: The same as GERMINAL-SPOT (q.v.).

germinal-matter, *s.*

Anat. & Physiol.: The name given by Beale both to the protoplasm and the nucleus of an animal cell, the two, however, being considered different by most histologists.

germinal-membrane, *s.*

Anat. & Physiol.: The same as VITELLINE-MEMBRANE (q.v.).

germinal-pole, *s.*

Anat. & Physiol.: The name given by Quain to the central point from which development spreads in the ovum of a bird or mammal.

germinal-spot, *s.*

Anat. & Physiol.: A spot corresponding to the nucleolus of an animal cell. Called also the Germinal-macula.

germinal-vesicle, *s.*

1. *Anat. & Physiol.:* A delicate, spheroidal, inclosing membrane, with protoplasmic fluid and fine granules, constituting an essential part of the human or animal ovum. After a time it disappears. (*Quain.*)

2. *Bot.:* The germ of a future plant, analogous to the germinal vesicle of animals. It is formed apparently before impregnation. Amici, Mohl, Müller, Henfrey, Hoffmeister, and Tulasne affirm its existence, while it is denied by Schleiden and Schacht.

ġĕr'-mĭn-ạnt, *a.* [Lat. *germinans,* pr. par. of *germino* = to bud, to sprout; *germen* (genit. *germinis*) = a bud, a sprout.] Sprouting; beginning to bud or sprout; growing; developing.

"Divine prophecies . . . are not fulfilled punctually at once, but have springing and *germinant* accomplishment throughout many ages."—*Bacon: Advancement of Learning,* bk. ii.

ġĕr'-mĭn-āte, *v.i. & t.* [Lat. *germinatum,* sup. of *germino* = to bud, to sprout; *germen* (genit. *germinis*) = a bud, a sprout; Fr. *germer;* Ital. *germinare;* Sp. *germinar.*]

A. *Intrans.:* To sprout; to shoot; to bud; to begin to vegetate as a plant.

"Paradise was made on the third day, when God caused the trees to *germinate* out of the earth."—*H. More: Defence of the Philosophic Cabbala.* (App.)

B. *Transitive:*

1. *Lit.:* To cause to sprout or bud.

2. *Fig.:* To shoot out; to put forth.

"Several French departments *germinate* a set of rebellious paper-leaves."—*Carlyle: French Revolution.*

ġĕr-mĭn-ā'-tion, *s.* [Fr., from Lat. *germinatio,* from *germinatum,* sup. of *germino* = to bud, to sprout; Sp. *germinacion;* Ital. *germinazione.*]

I. *Ordinary Language:*

1. *Lit.:* In the same sense as II. (q.v.).

"There's but little similitude betwixt a terreous humidity and plantal *germinations.*"—*Glanvill: The Vanity of Dogmatizing,* ch. xxi.

† 2. *Fig.:* The moral, mental, social, or political growth of an individual.

"The Duke of Buckingham had another kind of *germination.*"—*Wotton.* (*Johnson.*)

II. *Bot.:* The first act of growth which takes place in an embryo plant. It cannot occur without the presence of water, heat, and atmospheric air, or, at least, of oxygen. Popularly water obtains the credit of the whole process, and it is undoubtedly true that seeds rapidly absorb it with the effect of softening the tissue, enabling the parts to distend, as well as dissolving those of them which are soluble, so that they may be taken into the circulation as growth proceeds. But heat also is necessary, and atmospheric air, to furnish oxygen, which is most effective if

one part of it be diluted with three of nitrogen. Prior to germination the seed had in its composition some carbon, apparently to preserve it; with this the oxygen unites, forming carbon dioxide, which is thrown off. Meanwhile the parts of the seed have softened and distended; the embryo has swelled and burst its envelopes, after which the radicle is sent down into the ground, deriving its nourishment at first, however, from the cotyledons; the plumule rises upwards, and the process of growth and development is completely in progress.

ġẽr'-mĭn-āt-ĭve, *a.* [Eng. *germinat(e)*; *-ive.*] Of or pertaining to germination; which germinates.

"In the case of the cells which compose the early embryo, this parent cell is . . . the ovum itself, or, at least, its *germinative* part."—*Quain: Anatomy* (ed. 1878), ii. 9.

Bot. Geog.: Indigenous in the "Old World," *i.e.*, in the eastern hemisphere.

ġĕr-ŏ-pĭġ'-ĭ-a, jĕr-u-pĭġ'-ĭ-a, *s.* [Etym. doubtful.] A mixture used to give colour and spurious strength to port wines. It is made of unfermented grape-juice with brandy and sugar, and a colouring matter obtained from rhatany root or logwood.

ġẽr'-rēs, *s.* [Lat. = a fish, probably the shad.]

Ichthy.: A genus of Sparidæ, sub-family Mænidinæ. *Gerres rhombeus* is found in the West Indian Seas.

ġẽr'-rĭs, *s.* [Probably altered from Lat. *gerres* (q.v.).]

Entom.: A genus of Homoptera, sub-order Heteroptera, tribe Hydrocores (Water-bugs). They have an elliptical and elongate body, and triangular head with prominent eyes and no ocelli. The two front feet are short, the the thighs of the others very long, the legs and tarsi not easily distinguishable. They are black insects, which glide about on the surface of stagnant waters with great agility, using their hind feet for the purpose without diving. *Gerris lacustris* is common on the surface of water in Britain.

ġĕr-rȳ-măn'-dẽr, jĕr-rȳ-măn'-dẽr, *v.t.* [From Elbridge Gerry, Governor of Massachusetts, at the time when the plan was devised.] To divide as a state into political divisions, so as to give one party an unfair and unnatural advantage over others.

"But if equal electoral districts were introduced the success of the political parties would mainly depend upon the skilful manipulation of borough boundaries from time to time, a practice which has been elevated into a fine art in the United States, where it was known as *jerrymandering*."—*Prof. Fawcett*, in *Daily Telegraph*, Nov. 9, 1883.

* **gers,** * **gerss,** *s.* [GRASS.]

gẽrs'-dorff-īte, *s.* [Named from Hofrath von Gersdorff, who discovered the mineral in Styria.]

Min.: An isometric, pyritohedral, silver-white, steel-grey, or greyish-black mineral of metallic lustre, its hardness 5·5, sp. gr. 5·6 to 6·9. Compos.: Arsenic, 45·5; sulphur, 19·4; nickel, 35·1 = 100. Varieties: (1) Normal Gersdorffite, (2) Lowe's Gersdorffite, (3) Amoibite, (4) Plessite, and (5) Dobschanite. Found in Sweden, the Hartz Mountains, Styria, &c. (*Dana.*) The *British Museum Catalogue* considers it the same as Nickel Glance.

ġẽr'-ŭnd, *s.* [Lat. *gerundium*, from *gerundus* = to be done or carried out, fut. pass. part of *gero* = to carry out.]

Gram.: Originally a part of the Latin verb used to express the meaning of the present infinitive active in cases where the infinitive should properly be in some case other than the nominative. The word is also applied by grammarians to a dative form of the infinitive in Anglo-Saxon, governed by the preposition *to*, and expressed by the suffix *-e*: as, *etanne* = to eat, *faranne* = to go. In the twelfth century this ending *-enne*, *-anne*, was confounded with the participial ending *-ende* (*-inde*), and still later with the participial ending *-inge*: as, "This nyghte that is to *comyng*." In Anglo-Saxon the gerund was used to express a purpose or end, like the Latin gerund or supine. In phrases such as "Fit *for teaching*, fond *of learning*," teaching and learning are not gerunds, but verbal nouns governed by the preposition, and representing Anglo-Saxon substantives in *-ung*.

* **gerund-grinder,** *s.* A pedantic schoolmaster.

"A pedant, a mere plodder, a petty tyrant, a *gerund-grinder*."—*Knox: Winter Evenings*, Even. 59.

gesture-language, *s.*

Anthrop.: Gesture language is the name given to those movements of the hands and other parts of the body by means of which people of low culture eke out the deficiencies of their vocabulary, and persons ignorant of each other's language communicate their thoughts. Gesture-language exists wherever man is found. The expression of pain or surprise, the threatening shake of the head, the pointing of the finger possess the same messages for the cultured European and the debased negro. The traveller in a strange and unknown region is thrown back on gesture-language, and the expertness which American Indians have acquired in its use is marvellous, so that it is not uncommon to see two individuals of different nations sitting on the ground and conversing freely by means of the language of signs. The universality of the use of common gestures, and the fact that children first communicate their thoughts and emotions by this means, and then by onomatopoetic utterances, are relied upon by evolutionists as proofs that vocal languages did not always differentiate man from the lower animals. [LANGUAGE, ONOMATOPOEIA.]

"*Gesture-language* is instinct—the heritage of the days, it may be, of the days before man acquired articulate language, or differed thus far from the brute beast."—*Sayce: Nature & Science of Language*, i. 93.

Shakesp.: Measure for Measure, i. 5.

¶ Crabb thus discriminates between to *get*, to *gain*, to *obtain*, and to *procure*: "*Get* is not only the most general in its sense, but in its application; it may be substituted in almost every case for the other terms; *get* is promiscuously used for whatever comes to the hand, whether good or bad, desirable or not desirable, sought for or not; but *gain*, *obtain*, and *procure*, always include either the wishes, or the instrumentality of the agent, or both together. The word *gain* is peculiarly applicable to whatever comes to us fortuitously; for what we *gain* constitutes our good fortune. . . . To *obtain* and *procure* exclude the idea of chance, and suppose exertions directed to a specific end: but the former may include the exertions of others; the latter is parti-larly employed for one's own personal ex-tions." (*Crabb: Eng. Synon.*)

* **get-nothing,** *s.* An idle person; ne'er-do-well.

"Every *get-nothing* is a thief."—*Adams: Banquet*, p. 76.

¶ *A gey bit:* A considerable distance.

"Kippletringan was distant at first a *gey bit*, then the *gey bit* was accurately described as 'aiblins three mile,' and then the 'three mile' diminishes into 'like a mile and a bittoch;' then extended into 'four mile or thereawa.'"—*Scott: Guy Mannering*, ch. i.

***geyl-er,** *s.* [GAOLER.]

geȳs'-ĕr, geȳs-īr, *s.* [Icel. *geysa* = to gush.] *Geology, &c.:*

1. Certain intermittent hot springs in the south-western division of Iceland, about thirty miles from Mount Hecla. Nearly one hundred are said to break out within a circle of two miles. Few of them play longer than five or six minutes at a time, although sometimes they go on for half-an-hour. The largest is called the Great Geyser. It has a pipe 78 feet in vertical depth, and from eight to ten feet in diameter, but gradually widening as it rises into the basin. The latter is 56 feet long by 46 feet broad, and is lined with an incrustation of silica deposited from the hot water, the process being aided by the alkali soda, which, with minute quantities of various salts, exists in the water. When the geyser is about to act, subterranean noises are heard like the distant firing of cannon, and the earth is slightly shaken; then a column of the liquid element is thrown up to the height of 100 or 200 feet. Steam after a time makes it way out of the rent, and the fountain ceases to play. The second in size is the Strokkur. If stones or turf be thrown down its pipe, an eruption will follow in a few minutes, and eject them with great force. Sir George Mackenzie, Sir J. Herschel, Prof. Bunsen, Descloizeaux, and Professor Tyndall have all offered explanations of geyser action. It is produced by the heating of the lower part of the geyser tube, as Professor Tyndall was able to show experimentally.

2. Any similar intermittent hot springs. There are geysers in New Zealand, in the Northern Island, as remarkable as those of Iceland. They are on three parallel lines running in a direction north 36° E. by the compass. (*Lyell: Princip. of Geol.* (11th ed., 1872), ch. xxxiii.) Magnificent geysers have since been discovered in the Yellowstone region in the Rocky Mountains in North America.

geȳ'-ṣĕr-īte, *geȳ'-sīr-īte, *s.* [Eng. &c., *geyser*, and suff. *-ite* (*Min.*) (q.v.).]

Min.: A variety of Fiorite or Siliceous Sinter, which again is a variety of opal. It is applied to the concretionary deposits around the Icelandic geysers. [GEYSER.]. (*Dana*). The *British Museum Catalogue* makes geyserite simply a synonym for Siliceous Sinter.

I. *Ordinary Language:*

1. The act, right, or power of giving, bestowing, or conferring.

"Had the *gift* been theirs, it had not here
Thus grown." *Milton: P. L.*, ix. 806.

2. That which is given, bestowed, or conferred voluntarily and without compensation or return; a present, a donation, a boon.

"And she shall have them, if again she sues,
Since you the giver and the *gift* refuse."
Dryden: Virgil; Ecl. ii. 58.

* 3. An offering; an oblation.

"Therefore if thou offrest thi *gifte* at the auter, and there thou bethinkest that thi brother hath somewhat agens the, leave there thi *gifte* bifore the auter, and go first to be recounsciled to thy brothir, and then thou schalt come and schalt offre thi *gifte.*"—*Wycliffe: Matthew* v.

* 5. Anything given with a corrupt motive; a bribe.

"Thou shalt not wrest judgment, thou shalt not respect persons, neither take a *gift;* for a *gift* doth blind the eyes of the wise."—*Deuteronomy* xvi. 19.

6. A natural quality, talent, or endowment; a faculty, a power; a talent; considered as conferred by God.

"And Conversation in its better part
May be esteemed a *gift*, and not an art."
Cowper: Conversation, 4.

II. *Theol.* (*Pl.*): Endowments, some of them high; others—and these the majority—superhuman, conferred on individuals in the early church by the Holy Spirit, whence they are called spiritual gifts. St. Paul enumerates the word of wisdom, that of knowledge; faith, the gift of having ability to work miracles, to prophesy, to succeed in the discerning of spirits, to speak with divers tongues or interpret those tongues when spoken by others. (1 Cor. xii. 1, 8–10, &c.)

¶ (1) Crabb thus discriminates between *gift, present,* and *donation;* "The *gift* is an act of generosity or condescension; it contributes to the benefit of the receiver; the *present* is an act of kindness, courtesy, or respect; it contributes to the pleasure of the receiver. The *gift* is private, and benefits the individual; the *donation* is public, and serves some general purpose. The value of a *gift* is often heightened by being given opportunely; the value of a *present* often depends upon the value we have for the giver."

(2) He thus discriminates between *gift, endowment,* and *talent:* "*Gift* and *endowment* both refer to the act of *giving* and *endowing*, and of course include the idea of something given, and something received: the word *talent* contains no such collateral idea. When we speak of a *gift,* we refer in our minds to a *giver;* when we speak of an *endowment,* we refer in our minds to the receiver; when we speak of a *talent,* we only think of its intrinsic quality. The *gift* is either supernatural or natural; the *endowment* is only natural. *Talents* are either natural or acquired, or in some measure of a mixed nature; they denote powers without specifying the source from which they proceed. . . An *endowment* is a *gift,* but a *gift* is not always an *endowment;* a *talent* may also be either a *gift* or an *endowment,* but it is frequently distinct from both." (*Crabb: Eng. Synon.*)

gift-rope, *s.*

1. Loose or light in manners; wanton.

"To be the pillage of a *giglet* wench."
Shakesp.: 1 Henry VI., iv. 7.

2. Fickle, inconstant.

"For joy whereof,
The famed Cassibelan, who was once at point
(O *giglot* fortune!) to master Cæsar's sword."
Shakesp.: Cymbeline, iii. 1.

***ġĭg′-lŏt-rȳ,** *s.* [Eng. *giglot; -ry.*] The manners or character of a giglet; wantonness.

***ġĭg′-nĭ-tĭve,** *a.* [Lat. *gigno* = to beget, to bear; Eng. adj. suff. *-ive.*] Productive of something else.

"The first *gignitive* but not generated; the second and third both generated and *gignitive*; the fourth generated but not *gignitive*."—*Southey: The Doctor*, interchapter xv.

***ĝig′-ôt, *ġig′-gĕt, *ġig′-gŏt,** *s.* & *a.* [Fr. *gigot*, from O. Fr. *gigue* = a fiddle, the thigh, from the shape.]

A. *As substantive:*

1. A leg of mutton.

2. A piece, a fragment.

"The inwards slit,
They broild on coales, and eate. The rest, in *giggots* cut, they spit."
Chapman: Homer: Iliad i.

B. *As adj.:* Shaped like a leg of mutton; as *gigot* sleeves.

***gig-our,** *s.* [O. Fr. *gigueour*; Icel. *gigjari*; M. H. Ger. *gigære*; Ger. *geiger.*] A fiddler.

"Hi sede, hi weren harpurs,
And sume were *gigours*."
King Horn, 1,471.

Gĭl′-bĕr-tĭne, *a.* & *s.* [Named after their patron, Gilbert, lord of Sempringham in Lincolnshire, about A.D. 1148.]

A. *As substantive:*

Ch. Hist.: One of a monastic order which arose in England in the twelfth century. The monks observed the rule of St. Augustine; the nuns, that of St. Benedict.

B. *As adj.:* Of or belonging to the order described under A.

gĭl′-bĕrt-īte, *s.* [Named by Thomson after Mr. Davies Gilbert, a former President of the Royal Society.]

Min.: A whitish, silky mineral: its hardness 2·75; sp. gr. 2·65. Compos.: silica 45·15; alumina 40·11; protoxide of iron 2·43; magnesia 1·90; lime 4·17; and water 4·25. Apparently an impure kaolinite. Occurs near St. Austle in Cornwall. (*Dana.*)

gĭld, *gilde, *gĭld-en, *gyld, *gyld-yn, *v.t.* [A.S. *gyldan* = to pay; Icel. *gylla* = to gild.]

I. *Lit.:* To wash over with gold; to overlay with gold either in leaf or powder; to coat with gold.

"The *gilded* coach, indeed, which is now annually admired by the crowd, was not yet a part of his state."—*Macaulay: Hist. Eng.*, ch. iii.

II. *Figuratively:*

1. To give a golden colour or appearance to; to cause to shine or become bright like gold.

"And yet, what worth?—what good is given to men,
More solid than the *gilded* clouds of heaven?"
Wordsworth: Excursion, bk. iii.

2. To make resplendent with bright colours.

"He cannot skim the ground like summer birds
Pursuing *gilded* flies."—*Cowper: Task*, vi. 922.

* 3. To brighten, to cheer; to give a bright, happy appearance or character to.

"Let oft good humour, mild and gay,
Gild the calm evening of your day."
Trumbull: Advice to Ladies of a Certain Age.

* 4. To supply with gold; to make rich; to enrich.

"I will make fast the doors, and *gild* myself
With some more ducats, and be with you straight."
Shakesp.: Merchant of Venice, ii. 6.

* 5. To give a fair outward appearance to; to make fair outwardly: to recommend or set off by superficial decoration.

"I'll *gild* it [the lie] with the happiest terms I have."
Shakesp.: 1 Henry IV., v. 4.

* 6. To flush or make red with drinking; to make drunk.

"Find this grand liquor that hath *gilded* them."
Shakesp.: Tempest, v.

* 7. To redden, to besmear with blood.

"If he do bleed
I'll *gild* the faces of the grooms withall."
Shakesp.: Macbeth, ii. 2.

gĭld (1), *s.* [GUILD.]

***gĭld** (2), *s.* [Etym. doubtful; prob. connected with Icel. *gella* = to yell.] Clamour; noise; uproar.

"The *gild* and riot Tyrrianis doublit for joy;
Syne the reird followit of the younkeris of Troy."
Douglas: Virgil, 37, 11.

***gĭld,** *a.* [SW.] Strong; well-grown.

"Ane *gild* oxe is apprised [in Orkney] to 15 mesles, and ane wedder is four mesles."—*Skene: De Verb. Sign.*, s.v. *Serplaith.*

*** gĭld-ale,** *s.* A drinking bout in which each person pays an equal share.

gĭld′-ĕr (1), *** gyld-er,** *s.* [Eng. *gild; -er.*] One who gilds or overlays anything with gold.

"No conning artificer, caruer, painter, nor *gylder*, with such other lyke of what occupacyon soeuer thei be or haue bene to thy comoditie, shal neuermore be found againe."—*Bale: Image*, pt. iii.

***gĭld′-ĕr** (2), *s.* [GUILDER.] A coin, value 1s. 6d. (*Shakesp.: Comedy of Errors*, iv. 1.)

gĭld′-ĭng, *pr. par., a., & s.* [GILD, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

(1) The act, process, or art of overlaying with gold; or of applying gold in leaf, powder, or liquid, to surfaces of wood, metal, leather, paper, &c. Gilding is performed:—By laying on gold-leaf; by applying gold in amalgam, the mercury being subsequently evaporated; by electro-plating; by a sheet of metal soldered to the cheaper foundation metal; and by enamelling.

(2) Gold in leaf, powder, or liquid, applied to any surface.

2. *Fig.:* Any outward decoration or covering, designed to give a fair appearance to anything.

"Could laureate Dryden pimp and friar engage . . .
And I not strip the *gilding* off a knave?"
Pope: Satires, i. 115.

II. *Photog.:* The treatment of the finished daguerreotype-plate with a salt of gold—generally the hyposulphite of gold and soda—which determines the deposition of finely divided gold upon the vaporous mercurial deposit of which the picture consists. By this means permanence is imparted to the picture.

gilding-size, *s.* A viscid composition laid upon an object to hold a surface of gold-leaf. The bookbinder uses glaire, white of egg; the oil-gilder uses a mixture of linseed-oil and ochre.

¶ (1) *Burnished gilding:* Distemper gilding polished by burnisher; used especially in picture-frames.

(2) *Chemical-gilding:* Gilding produced by galvanic action in the bath, or by affinity.

(3) *Cold-gilding:* Effected by rubbing the annealed metal with gilding powder by means of a piece of cork dipped in salt water, and polishing with steel-burnisher.

(4) *Distemper-gilding:* Applied to wood, plaster, or marble, which is coated with size, successive coats of finely-powdered whiting, and faced by rubbing with sand-paper between each. Gold size is then applied, then the leaf, which is polished with an agate or dog's tooth.

(5) *Electro-gilding:* [ELECTRO-PLATING].

(6) *Friction-gilding:* [*Cold-gilding*].

(7) *German-gilding:* The same as ELECTRO-PLATING (q.v.).

(8) *Immersion-gilding:* Effected by dipping the metallic article into a solution of pyrophosphate of soda in which terchloride of gold has been dissolved.

(9) *Leaf-gilding:* The process of coating the paper or vellum with gum-water or glaire, laying on the leaf-gold and polishing with an agate.

(10) *Mechanical-gilding:* The name given to

any process in which the gold is made to adhere by glue.

* **gīle,** *s.* [GUILE.]

* **gĭl′-ĕr-y̆,** *s.* [GUILERY.]

ġĭl′-hoôt-ĕr, *s.* [Eng. *gill* (4), and *hooter.*] A name sometimes given to the screech-owl. Chiefly in Cheshire.

ġĭll (1), * **gil,** * **gyll, gylle,** *s.* [Dan. *giælle*; Sw. *gäl* = a gill; Icel. *gjölnar* (pl.) = gills; Gael. *gial* = a jaw.]

I. *Ordinary Language:*

1. In the same sense as II. 1.

"The leviathan . . at his *gills*
Draws in, and at his trunk spouts out, a sea."
Milton: P. L., vii. 415.

2. The flap that hangs below the beak of a fowl, as the wattles in a turkey.

"The turkeycock hath great and swelling *gills*, and the hen hath less."—*Bacon: Natural History.*

3. The flesh under or about the chin.

"In many there is no paleness at all; but, contrariwise, redness about the cheeks and *gills*."—*Bacon: Natural History.*

II. *Technically (Pl.):*

1. *Ichthy.:* The branchiæ of fishes; a double row of long, compressed, slender-pointed processes, extending, like the teeth of a comb, from the convex side of a branchial arch, and supported by a delicate membrane. Gills may be free or fixed. In Myxinoids there are only gill-sacs. In some osseous fishes, certain of the branchial arches support only one series of processes, called uniserial or half-gills: in most cases they have biserial or whole gills. Gills, as a rule, are pectinated; there are also, however, plicated and tufted gills. The main purpose of the gills is to expose the venous blood, in a state of minute sub-division, to the influence of streams of water. (*Owen: Comp. Anat. Vertebrate Animals*, pt. i.; *Fishes.*)

2. *Entom.:* Hair or leaf-like processes projecting from the body of some aquatic insects, and containing one or more tracheæ, and their ramifications communicating with those of the body generally. Insects thus equipped do not need to rise to the surface of the water to breathe. (*Griffith & Henfrey.*)

3. *Bot.:* The lamellæ or parallel plates on the underpart of the pileus of an Agaricus. They constitute the hymenium in which the spores lie.

gill-arches, *s. pl.*

Ichthy.: The arches supporting the gills. They are generally five in number.

† **gill-bar,** *s.* One of the five branchial arches.

gill-cover, *s.*

Ichthy.: The same as GILL-LID (q.v.).

gill-flap, *s.*

Ichthy.: A membrane attached to the posterior edge of the gill-lid, immediately closing the gill-opening.

gill-lid, *s.*

Ichthy.: The lid or covering of the gills.

gill-net, *s.* A net suspended in a stream, having meshes which allow the heads of the fish to pass, and which catch in the gills to prevent the fish from detaching itself.

gill-opening, *s.*

Ichthy.: The opening by which the water from the gills passes off.

gill-sac, *s.*

Ichthy.: One of the rudimentary gills constituted by sacs, occurring in the Myxinoids and Lampreys. A gill of the ordinary fishes is the homologue, not of a single gill-sac, but of the continuous halves of two of them. (*Owen: Compar. Anat.*, pt. i.; *Fishes.*)

gĭll (2), **ghyll,** * **gille, gylle,** *s.* [Icel. *gil* = a deep, narrow glen; *geil* = a ravine.] A fissure in a hill; a ravine with a river running through it; a brook, a ghyll, a gully.

"On one hand the ground gently rises into a hill, on the other are the rocky banks of the rivulet almost perpendicular. You may continue along the *gill*."—*Gray: Letters to Dr. Warton*, Sept. 14, 1765.

gĭll (3), *s.* [Fr. *aiguille* = a needle.]

Flax-dressing: A hackle; a series of points which divide the ribbons of flax fibre into finer parallel filaments ready for drawing and spinning; a porcupine.

gill-frame, gill-head, *s.*

Flax-dressing: A machine in which stricks of wax are drawn out into slivers; doubled and combined with other slivers, and redrawn until they assume the character of rovings, and are ready for spinning. A spreader. The name gill-frame is derived from a number of vertical needles forming a comb, through which the line passes to the drawing-roller; the gill is attached to a fuller-bar, which rises and falls at intervals, and alternately detains and releases the line, which, by a series of operations, is converted from a strick to a sliver, and then to a roving.

ġĭll (4), *s.* [A shortened form of *Gillian* = Lat. *Juliana.*]

I. *Ordinary Language:*

1. A girl, a sweetheart, a lass. [GILLIAN.]

"Can nothing priuate haue
Vncensur'd of our seruants, though
The simplest *gill* or knave."
Warner: Albions England, bk. vii. ch. xxxvii.

2. Malt liquor medicated with ground-ivy.

II. *Bot.:* Ground-ivy, *Nepeta Glechoma.* It is also called Gill-creep-by-the-hedge.

gill-ale, *s.*

Bot.: Alehoof.

gill-flirt, *s.* A wanton girl, a flirt.

* **gill-house,** *s.* A house where gill is sold.

"Thee shall each alehouse, thee each *gill-house* mourn,
And answering gin-shops sourer sighs return."
Pope: Dunciad, iii. 147.

* **gill-run-by-the-sheet,** *s.*

Bot.: Saponaria officinalis.

ġĭll (5), * **gille,** * **gylle,** *s.* [O. Fr. *gelle* = a measure for wine; cf. Low Lat. *gillo, gella* = a wine vessel, a measure; Ir. *jale* = a large bowl; Eng. *gallon* (q.v.).]

1. A measure of capacity, containing the fourth part of a pint. The standard gill now in use contains 8·665 cubic inches.

"In full *gills* his anxious thoughts he drowns,
And quaffs away the care that waits on Crowns."
Addison: The Playhouse.

*2. A kind of measure among tin-miners, equal to a pint.

"They measure their block-tin by the *gill*, which containeth a pint."—*Carew: Survey of Cornwall.*

ġĭl′-lạr-ôo, *s.* [Irish (?).]

Ichthy.: A variety of the Common Trout, in which the coats of the stomach are said to be thickened like the gizzard of birds by feeding on shell-fish. It is found in Galway and some other parts of Ireland.

ġĭl-lĕn′-ĭ-ạ, *s.* [Named by Mœnch after Dr. Arnold Gillen, a German botanist.]

Bot.: A genus of Rosaceæ, family Spiræidæ. The root of *Gillenia trifoliata* and that of *G. stipulacea* are emetic, and perhaps tonic. They are used in the United States as ipecacuanha.

ġĭl′-lĕt, *s.* [A dimin. of *gill* (4), s.; cf. *giglet.*] A sportive or wanton girl or woman; a giglet.

Ġĭl′-lĭ-ạn, *s.* [A softened form of *Juliana*, the female name corresponding to Lat. *Julius.*] A girl, a sweetheart; a wanton or loose girl.

ġĭl′-lĭe, *s.* [Gael. *gille* = a boy, a gillie.] In the Highlands a man-servant, an out-door attendant; especially one who accompanies his master while hunting.

"And with the help of his *gillies* he gat him into the hills."—*Scott: Waverley*, ch. xviii.

ġĭl-liēş′-ĭ-ạ, *s.* [Named after Dr. Gillies of Mendoza in Chili.]

Bot.: The typical genus of the small order Gilliesiaceæ (q.v.).

ġĭl-liēş-ĭ-ā′-çĕ-æ, *s. pl.* [Mod. Lat. *gilliesi(a)* (q.v.). and Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: Gilliesiads, an order of Exogens, alliance Liliales. It consists of small, herbaceous plants with tunicated bulbs. The leaves are grassy; the flowers, which are inconspicuous, are umbellate, surrounded by bracts, the outer petaloid and herbaceous, the inner coloured; perianth minute; stamens six, three sometimes sterile; ovary superior, three-celled; style one, stigma simple; capsule three-celled, three-valved, many-seeded. They occur in Chili. In 1844 Lindley enumerated two genera, and estimated the known species at five.

* **gĭm′-ple**, *s.* [Wimple.]

ġĭn (1), *s.* [O. Fr. *genevre* = juniper; Lat. *juniperus*, from the spirit being flavoured with berries of the juniper.]

Comm.: A compounded spirit, prepared either by re-distilling plain spirit with juniper berries, coriander seeds, angelica root, &c., or by adding various essential oils to rectified spirit. The gin produced by distilling possesses a much more delicate flavour than that produced by mixing or compounding. The strength of gin varies from proof to 50 under proof, but by the Act of Parliament, 42 & 43 Vict. c. 30, § 6, any gin, sweetened or unsweetened, sold below 35 under proof is considered to be adulterated with water, unless the purchaser is informed of its exact strength at the time of the purchase. Gin is reduced with water, and sweetened with sugar or syrup, but none of the injurious substances, said to have been used in former times are now found even in low-class gins. Cordial gin is sweetened gin flavoured with certain spices. Orange gin possesses the flavour of orange peel. Sloe gin is prepared by steeping sloes in strong gin for some weeks, then filtering and reducing with water.

"Ingenuity is exhausted in devising attractive titles for the different descriptions of *gin*."—*Dickens: Sketches by Boz; Gin-shops.*

gin-house (1), *s.* A place where gin is sold; a gin-palace.

gin-palace, *s.* A gaily decorated public-house, usually in a low neighbourhood; one in which spirits are the staple articles of consumption.

"If temperance societies could suggest an antidote against hunger or distress, or establish dispensaries for the gratuitous distribution of Lethe-water, *gin-palaces* would be numbered among the things that were."—*Dickens: Sketches by Boz; Gin-shops.*

gin-shop, *s.* The same as Gin-palace (q.v.).

"Death, at unawares, might duck him
Deeper than the grave, and quench
The *gin-shop's* light in hell's grim drench."
R. Browning: Christmas Eve, iii.

gin-sling, *s.* A cold drink, composed of gin, soda-water, lemon, and sugar.

ġĭn (2), * **ginne** (1), * **gyn** (1), * **gynne** (1), *s.* [A contraction of Fr. *engin*, from Lat. *ingenium* = a contrivance.] [Engine.]

* **I.** *Ordinary Language*:

1. A mechanical contrivance or engine; a machine.

"[They] granten to lend to the seid John Wastell sum parte of old scaffoldyng, tymbre, and the use of certayne stuff, and necessaryes there, as *gynnes*, wels, cables, &c."—*Walpole: Anecdotes*, i.; *App. Indenture, 4 Henry VIII.*

2. An engine of torture.

"Typhæus ioynts were streached on a *gin*.
Theseus condemned to endless slouth by law;
And fifty sisters water in leke vessels draw."
Spenser: F. Q., I. v. 35.

3. Mechanism; mechanical arrangement.

"Bid him descend, and trill another pin
(For therin lieth the effect of all the *gin*),
And he wol doun descend, and don your will."
Chaucer: C. T., 10,636.

II. *Machinery*:

1. A portable hoisting-machine whose frame is a tripod, one leg being movable so as to vary its angle of elevation, and thus determine the height of the apex; the other two legs preserve their relative distance, and form standards for the drum, round which the rope is wound by power applied to the handspikes. For heavy weights a fall and tackle is used; and for hoisting a bucket from a well or mine, simply a couple of pulleys to change the direction of motion of the rope. One pulley is suspended from the apex, and the other attached between the two permanent legs, so as to change the rope to a horizontal position, for the attachment of a draught horse.

2. A pump operated by windmill.

"No *gins* or machines could suffice to lay and keep them dry."—*Ray: The Creation*, ii.

3. A coal-hoisting machine; a whin.

4. A machine for separating cotton-fibre from the seeds.

gin-block, *s.* A tackle-block with a hook to swing from the gib of a crane or from the sheer of a gin.

gin-horse, *s.* A mill-horse; a horse employed in working a gin.

"He would make his rounds like the *gin-horse* in its circuit, or the prisoner on his wheel."—*McCosh: Method of the Divine Government*, p. 174.

gin-house (2), *s.* A house or building where cotton is ginned.

gin-race, *s.*

Mining: A miner's term for the horse-track of a whin or hoisting apparatus.

gin-ring, *s.* The ring or circle in which a horse moves in working a gin.

gin-saw, *s.* A saw used in a cotton-gin for drawing the fibres through the grid, leaving the seed in the hopper.

gin-wheel, *s.*

1. A wheel in a cotton-gin. It may mean a wheel with curved pointed teeth or claws, which act as the teeth of the usual saws in drawing the fibre through the grid; or the brush-wheel, which cleans the lint from the said wheel or saw.

2. The wheel or drum of a whin.

ǵĭn (3), ***ginne** (2), ***gyn** (2), ***gynne** (2), *s.* [Icel. *ginna* = to dupe, to deceive. (*Skeat*).] A trap, a snare, to catch animals and birds.

A. *As substantive:*

1. *Botany:*

(1) *Zingiber officinale*, Common or Narrow-leaved Ginger. It has subsessile linear lanceolate smooth leaves, oblong spikes, acute bracts, and a three-lobed lip. It is a native of India, but is cultivated in most tropical countries.

(2) The genus *Zingiber*. There is a Broad-leaved Ginger, *Zingiber Zerumbet*, also a native of India. It is used externally for cataplasms and fermentations but is not eaten.

(3) *Sedum acre*, from its extreme pungency.

2. *Comm.:* The dry wrinkled rhizomes of the ginger-plant. The pieces, or as they are called *races*, are usually from two to four inches long, branched, flat, and of a pale buff colour. Ginger is known in commerce under two forms, coated and uncoated or scraped, the latter having been deprived of its epidermis when in the green state, and sold as white ginger. The chief varieties imported into this country are Jamaica, Cochin, Bengal, Japan

GINGER-PLANT.

and African. The first three are scraped gingers, and of these Jamaica is the most esteemed owing to its colour and flavour. Some kinds of ginger are bleached with chloride of lime, whilst others are simply coated with chalk to give them a whiter appearance. Ginger is an agreeable aromatic, and a valuable stomachic; but is more largely used as a condiment than as a medicine. Preserved ginger, so largely imported from China into England in jars, consists of the young rhizomes boiled in syrup. Ground ginger is frequently adulterated, the chief adulterants being sago flour, wheat flour, ground rice, and arrowroot. These are added, not only to increase the weight, but to whiten a dark-coloured variety, which is then sold as a first-class ginger. All these substances can be readily detected by the microscope.

3. *Pharm.:* Ginger is the rhizome scraped and dried of *Zingiber officinale*, a native of East India; also grown in the West Indies. Ginger contains a volatile oil, starch, resinous matter, gum, woody fibre, &c. It is an aromatic stimulant and carminative, and is given in dyspepsia and with purgative medicines to prevent griping. It is used to prepare *Syrupus Zingiberis*, Syrup of Ginger, and *Tinctura Zingiberis*, Tincture of Ginger.

By the Germans they were called *Zigeuner;* Dut. *Heidenen* (= Heathens); Dan. & Sw. *Tatars;* Ital. *Zingari;* Sp. *Gitanos* and *Zincali;* Fr. *Bohémiens;* Pers. *Sisech;* Hind. *Karachee;* and by themselves *Rom* (= man).]

A. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

(1) In the same sense as II. 1.

(2) The language spoken by the gipsies.

2. *Figuratively:*

(1) A person of a dark complexion; used in contempt or reproach.

"Laura, to his lady, was but a kitchen-wench; Dido a dowdy; Cleopatra a *gipsy.*"—*Shakesp.: Romeo & Juliet*, ii. 4.

(2) A cunning or crafty person; a person of bad character; a sly person.

"A slave I am to Clara's eyes:
The *gipsy* knows her power and flies."
Prior: Dutch Proverb.

II. *Technically:*

1. *Ethnol.:* A nomad Eastern race, the members of which came to Europe by way of the Isthmus of Suez and Egypt. They were, therefore, assumed to be Egyptians, and are so called in the Elizabethan legislation against them, and in other places. As Egypt became better known to the English, it was found that the "Egyptians" were as much foreigners there as here. It is now proved that they are from India, and apparently from that part of it adjacent to the river Indus, with the languages of some tribes inhabiting the banks of which their tongue best agrees. A tribe near the mouth of the Indus are called Tchinganes, which is almost exactly the same as Tchingenes, by which name these wanderers are known in Turkey and the Levant. They call themselves Sind, the name of the country through which the Indus flows in the lower part of its course. They are believed to have quitted their native country in dread of Timur Beg, better known as Timoor the Tartar, or Tamerlane, and first appeared in Paris, in the end of August, 1427.

2. *Entom.:* A moth, *Hypogymna dispar*, of the tribe Bombycina and the family Liparidæ. The male is dark-brown, and the female greyish-white.

B. *As adj.:* Of or pertaining to a gipsy or gipsies; resembling a gipsy.

"The frock and *gipsy* bonnet."
Tennyson: Maud, I. xx. 19.

gipsy-hat, * **gypsy-hat,** *s.* A hat with large side flaps, worn by women.

gipsy-moth, gypsy-moth, *s.*

Entom.: The same as GIPSY, A. II. 2 (q.v.).

gipsy-winch, *s.*

Mach.: A small winch, having a drum, ratchet, and pawl; it may be fastened to a post. The handle of the winch is attached by stirrups to a cap revolving on the axis. Two motions can be applied to the winch, the ordinary rotary method of working the handle, and a reciprocating motion, in which the handle is worked up and down like a pump-handle.

ġĭp′-sȳ-ĭşm, ġȳp′-sȳ-ĭşm, *s.* [Eng. *gipsy, ism.*]

1. The habits, practices, acts, or arts of gipsies; cheating, deception.

2. The state or condition of a gipsy.

ġĭp′-sȳ-lĭke, ġȳp′-sȳ-lĭke, *a.* [Eng. *gipsy, gypsy; like.*] Like a gipsy or gipsies; resembling gipsies.

"The heath was fringed by a wild *gipsylike* camp of vast extent."—*Macaulay: Hist. Eng.*, ch. xxi.

ġĭp′-sȳ-wŏrt, ġȳp′-sȳ-wŏrt, *s.* [Eng. *gypsy, gipsy,* and *wort.*]

Botany:

1. *Lycopus europæus.* It is a labiate plant, dense whorls of flowers, white, with purple dots; hairy within, and having two stamens and leaves deeply and irregularly pinnatifid or serrate. It is about two feet high, and grows in England, &c., in ditches and by river banks.

2. The genus Lycopus.

ġĭ-raffe′, * **ġĭ-răf′-fa,** *s.* [Fr. *girafe;* Sp. & Port. *girafa;* Ital. *giraffa,* from Arab. *zurafa.*]

1. *Zool.:* The Camelopard, *Camelopardalis giraffa.* It constitutes the type of the family Camelopardalidæ (q.v.). It has an affinity to the camel; but its resemblance to the leopard, which is only in its colour and spots, is an analogy and no more. It has two small frontal horns and one central horn. The neck is very long, but has only the normal number of cervical vertebræ. The tongue is long and prehensile, and is used for stripping leaves off trees. The forelegs are very long, making the animal stand 15 to 18 feet high. It lives in small herds, and gallops in a ludicrously clumsy manner. The animal is inoffensive when unmolested, but will try to kick its assailant if it be attacked. Its flesh is good; when old it becomes coarse; the hide makes excellent leather. It is found in Nubia, Abyssinia, and the Cape of Good Hope; probably also in every part of the intermediate region.

2. *Palæont.:* Species of giraffe have been found in Miocene strata in India, Greece, and France.

ġĭ-răff-ī′-na, *s. pl.* [Eng., &c. *giraff(e),* and Lat. pl. adj. suff. *-ina.*]

Zool.: A tribe of ruminant mammals, sometimes constituted for the reception of the family Camelopardalidæ, with which it agrees in extent.

ġĭr′-an-dōle, *s.* [Fr.; Ital. *girandola,* from *girare* = to turn about; Lat. *gyrus* = a turn.]

1. *Ord. Lang.:* A branching candle-holder or chandelier; a gaselier.

"*Girandoles* of silver and mother-of-pearl."—*Lytton.* (*Latham.*)

2. *Pyrot.:* A kind of revolving firework; a revolving sun.

* **ġĭr′-ant,** *a.* [Lat. *gyrans,* pr. par. of *gyro* = to turn round in a circle.] Whirling, revolving.

"I wound in *girant* orbits, smooth and white."
E. B. Browning.

ġĭr-ar-dĭn′-ĭ-a, *s.* [Named by Gaudichaud, in 1826, after S. Girardin.]

Bot.: A genus of Urticaceæ. Sir Joseph Hooker says that a kind of cloth, and also a sort of cordage, are made from fibre furnished by *Girardinia heterophylla*, common in Sikkim and other parts of the Himalayas. Thread is made in Southern India from the closely allied species *G. Leschenaultiana.*

ġĭr′-a-sōl, ġĭr′-a-sōle, *s.* [Fr. *girasol,* from Lat. *gyro* = to turn, and *sol* = the sun.]

1. *Min.:* A variety of opal. It is bluish white, and is translucent, with reddish reflections in a bright light.

† 2. *Bot.:* A plant—*Heliotropium europæum*, more commonly called the Turnsole.

giraumont (as **zhĕr-ō-mŏn′**), *s.* [Fr. *giraumont, giraumon;* remote etym. unknown.]

Botany:

1. A cucurbitaceous plant, *Cucurbita Pepo.*

2. Another cucurbitaceous plant of unknown

species, the seeds of which are said by Endlicher to destroy the tapeworm.

gĭrd (1), * **gyrd,** *s.* [GIRD (1), *v.*]

"'What's a quip?' 'We great *girders* call it a short saying of a sharp wit, with a bitter sense in a sweet word.'"—*Lyly: Alexander & Campaspe,* iii. 2.

gĭrd'-ĕr (2), *s.* [Eng. *gird* (2), v.; *-er.*]

I. *Ordinary Language:*

1. One who or that which girds, surrounds, or supports.

"What *girder* binds, what prop the frame sustains."
Blackmore: Creation, bk. iv.

2. A cooper.

II. *Civ. Eng.:* A principal beam, of wood or metal, spanning the distance from wall to wall, or pier to pier, and used to support a superstructure or superincumbent weight, as a floor, the pathway of a bridge, &c. Girders are often compound, the timbers being scarfed together and stayed by truss-work, or fished at the joint. The ends of the girder rest on the wall or pier to an extent varying according to the span: thus for a girder of ten feet span, the bearing at each end should be seven inches; for a twenty feet span, fourteen inches. The ends rest on templates. [TEMPLATE.] Girders are of various sorts, according to the purpose for which they are required. [BOWSTRING-GIRDER, BOX-GIRDER, LATTICE-GIRDER, TRUSS-GIRDER.] A sandwich-girder is one which is composed of two wooden beams with an iron flitch-plate between, all bolted together.

"The *girders* are also to be of the same scantling the summers and ground-plates are of, though the back *girder* need not be so strong as the front *girder.*"—*Moxon: Mechanical Exercises.*

Ġír-oṅ′-dĭst, Ġír-oṅ′-dĭn, *s. & a.* [Fr. *Girondin;* Eng., &c. suff. *-ist.* See def.]

A. *As substantive:*

Hist.: The name of a great political party in France; one of the most powerful factors in at least the earlier part of the first French Revolution. When the Legislative Assembly met in A.D. 1791, it was found to contain representatives of all the three parties which naturally exist in every country—those of the upper, the middle, and the lower classes. The Girondists were the second of these—the party of the middle classes, and were republican in sentiment. They obtained their designation from the fact that their most celebrated leaders, Vergniaud, Guadet, Gensonné, &c., were members for the department of the Gironde, originally lawyers in the law court of Bordeaux. Their followers were the burgess class, the professionals, and the smaller agriculturists. In 1791 they were the most powerful party in the Assembly, and for a time shaped the policy of their country. When conservative Europe, in the interests of monarchy, threatened France with invasion, it was the Girondists who, in April, 1792, declared war, the Jacobins deprecating hostilities, as fearing the result. To overcome their monarchic rivals, the Girondists coquetted with the last-named party, and found that they had gained, not a servant, but a cruel and exacting master. The quarrel between the two arose after the massacres perpetrated in August and September, 1792, and the extreme revolutionists ultimately prevailing, an armed mob on May 31, 1793, assailed the Convention, and demanded the imprisonment of twenty-nine Girondist deputies. These were arrested on June 2, and twenty-one of them were guillotined on October 31. Others were subsequently put to death; a few escaping, reappeared in the Convention after the fall of Robespierre.

* (2) To yield the supremacy or pre-eminence; to acknowledge oneself beaten by ... inferior to another.

"Lessons being free from some inconveniences whereunto sermons are more subject, they ... this respect no less take than in others they ... *the hand*, which betokeneth pre-eminence."— ... *Ecclesiastical Polity.*

¶ (1) Crabb thus discriminates between *give*, to *grant*, and to *bestow*: "The ... communicating to another what is ... or in our power, is common to these ... this is the whole signification of *give*; ... *grant* and *bestow* include accessory ... their meaning. To *grant* is to give ... pleasure; to *bestow* is to give with ... degree of necessity. *Giving* is confined ... object; whatever property we transfer ... the hands of another, that we *give*; ... money, clothes, food, or whatever is ... able: *granting* is confined to such ... afford pleasure or convenience. To give ... respect to the circumstances of the ... the agent; it is applicable to persons ... conditions: to *grant* bespeaks not only ... will, but the power and influence of ... *granter*: to *bestow* bespeaks the ... condition of the receiver."

(2) He thus discriminates between ... to *present*, to *offer*, and to *exhibit*: "What ... *given* is actually transferred: what is ... that is, made a *present* to him; or ... is, brought in his way, is put in the ... being transferred: we *present* in ... *offer* in order to *give*; but it may be ... may *give* without *presenting* or *offering*; ... on the other hand, we may ... without *giving*. To *give* is the ... which designates the ordinary ... property: to *present* is a term of ... includes in it the formality and ... setting before another that which ... *give*: to *offer* is an act of humility ... nity; it bespeaks the movement of the ... which impels to the making a transfer ... To *exhibit* expresses, likewise, the ... attracting notice also: that which is ... is more striking than what is ... *offered*; thus a poem is said to *exhibit* ... of genius."

(3) He thus discriminates between ... *up*, to *yield*, to *deliver*, to *surrender*, ... and to *concede*: "We *give up* that wh... wish to retain; we *deliver* that which ... not to retain. *Deliver* does not ... idea of a transfer; but *give up* implies ... the giving from, and the giving to ... *up* our house to the accommodation ... friends; we *deliver* the property ...

hands of the owner. Where the action is compulsory, we may either say an officer *gives up* or *surrenders* his sword; when the action is discretionary, we may either say he *gives up* or *yields* a point of discussion: *give up* has, however, an extensiveness of application, which gives it an office distinct from either *surrender* or *yield*. *Cede* is properly to *surrender* by virtue of a treaty: we may *surrender* a town as an act of necessity; but the *cession* of a country is purely a political transaction. To *concede*, which is but a variation of *cede*, is a mode of *yielding* which may be either an act of discretion or courtesy."

(4) He thus discriminates between to *give up*, to *abandon*, to *resign*, and to *forego*: "To *give up* and *abandon* both denote a positive decision of the mind; but the former may be the act of the understanding or the will, the latter is more commonly the act of the will and the passions: to *give up* is applied to familiar cases; *abandon* to matters of importance. To *give up* and *resign* are applied either to the outward actions, or merely to the inward movements: but the former is active, it determinately fixes the conduct; the latter seems to be rather passive: thus we *give up* expectations and *resign* hopes. *Forego* is comparable with *resign*, inasmuch as it expresses a passive action: we *resign* that which we have, and we *forego* that which we might have: we *resign* the claims which we have already made, we *forego* the claims which we might make." (*Crabb: Eng. Synon.*)

given (as **gĭvn**), * **gev-en**, * **gif-en**, * **gif-fene**, * **gov-en**, * **gyf-en**, * **gyv-en**, **gyv-yn**, * **yeve**, * **yov-en**, *pa. par.* or *a.* [GIVE.]

* **glā'-çĭ-a-ble** (or **çĭ** as **shĭ**), *a.* [Lat. *glaci(es)* = ice, and Eng. suff. *-able.*] Capable of being converted into ice.

"Sensible philosophers conceive of the generation of diamonds, iris, beryls; not making them of frozen icicle, or from meer aqueous and *glaciable* substances."—*Browne: Vulgar Errours*, bk. ii., ch. i.

* **glā'-çĭ-al** (or **çĭ** as **shĭ**), *a.* [Fr. & Sp. *glacial;* Port. *glacal;* Ital. *glaciale*, from Lat. *glacialis* = icy, frozen, full of ice; *glacies* = ice.] Of or belonging to ice.

"And for his *glacial* air, where is the shepherd so simple, but could have told him, that snowy or what ever else he means by *glacial* air, or clouds may serve to darken the day, but not at all prolong it?"—*Grew: Cosmologia Sacra*, bk. iv., ch. iv.

glacial acetic-acid, *s.*

Chem.: A name given to concentrated acetic acid, containing 84 per cent. of $CH_3{}'CO{}'OH$. It is so called because it forms a colourless crystalline mass like ice when it is cooled to 34° F., and it remains crystalline till the temperature rises to 48° F. Its sp. gr. is 1·065. It is used externally as a caustic irritant, vesicant, and escharotic.

glacial-drift, *s.*

Geol.: Drift, that is transported material, in the carrying or deposition of which ice, in the form either of land ice or of icebergs, took the leading part. The smoother surfaces of the boulders and pebbles generally exhibit a series of scratches, parallel to each other if made contemporaneously, though, if arising at different periods, a newer set of scratches may cross an older one. The fossil remains are those of more or less arctic molluscs and other animals. It is the same as Boulder-drift (q.v.). [GLACIAL-FORMATIONS, GLACIAL-PERIOD.]

glacial-epoch, *s.* [GLACIAL-PERIOD.]

glacial-formations, *s. pl.*

Geol.: A more comprehensive term than glacial-drift (q.v.). Strata of this character, of Newer Pliocene age, occur at Bridlington, near the mouth of the Humber in Yorkshire, in the Norfolk cliffs near Happisburg, Cromer, &c.; at Chillesford, between Woodbridge and Aldborough in Suffolk, and parts of Essex, &c. Similar strata in some other localities are of Post-Pliocene age.

glacial-period, glacial-epoch, *s.*

Geol.: A period or epoch during which ice largely prevailed, the climate, in what are now temperate latitudes, being polar. It lasted long, commencing during the Newer Pliocene, and terminating before the close of the Post-Pliocene. Arctic conditions did not prevail uninterrupttingly during all this time. Two distinct divisions of the glacial-period or distinct glacial-periods are traceable in the Alps, the earlier one the more severe of the two. During the warmer interval, called by Professor Heer the Inter-glacial Period, dense beds of lignite were deposited at Dürnten and other places near Zurich. The Forest bed of Norfolk is similarly situated between two series of glacial strata. When these arctic conditions began, Britain presented, as it does now, a considerable extent of contiguous land. Then it became submerged, Scotland sinking, at least, 500 feet below its present level, Cheshire 1,300 feet, and North Wales 1,400 feet. This subsidence left nothing above water, except an archipelago of small islands. Finally an upheaval took place, uniting these scattered fragments into a continuous expanse of land. It was during the glacial-period, that the Alpine plants, now found on the summit of European mountains, passed southward from the Arctic regions. During the later of the two glacial periods man existed, whether he did so during the earlier one, is matter of dispute. What caused the abnormal cold has not been settled. It may, as Sir Charles Lyell thinks, have been great expanses of high land near the North Pole. Sir John Herschel in 1832, M. Adhémar in 1840, and notably Mr. Croll in 1864, suggested astronomical causes which may have had an effect in bringing on the glacial epochs. The chief is the varying eccentricity of the earth's orbit. In A.D. 1800 this was ·0168, but 200,000 years previously it was ·0567, making a difference of 10½ millions of miles, and creating an excess of winter days amounting to 27·7. So also 210,000 years before A.D. 1800, the eccentricity was 0·675, the difference in millions of miles, 10½, and the winter days in excess 27·8. If the glacial-period was thus produced, this may have been its date. The difference was 10½ millions of miles against 750,000 years, and 13½ millions 850,000 years before A.D. 1800. That no glacial strata had been found earlier than those in the Newer Pliocene militates against the view that the cold of that time was produced by periodically recurrent astronomical causes. glacial phosphoric-acid, *s.*

Chem.: $H_2O{\cdot}P_2O_5 = HPO_3$. It is exceedingly deliquescent, and requires to be kept in a closely-stopped bottle. It is called also metaphosphoric-acid.

glacial-theory, glacial-hypothesis, *s.*

Geology:

1. An hypothesis or a theory now universally accepted, which attributes the drift mainly to the action of ice.

2. An hypothesis or theory as to the descent of glaciers. [GLACIER.]

glā'-çĭ-al-ĭst (or **çĭ** as **shĭ**), *s.* [Eng. *glacial; -ist.*]

A. *As subst.:* One who attributes the phenomena of the drift to the action of ice. Nearly all geologists are now glacialists.

B. *As adj.:* Of or belonging to the school of geologists described under **A**, or their tenets: as, *glacialist* views.

glā'-çĭ-al-lȳ (or **çĭ** as **shĭ**), *adv.* [Eng. *glacial; -ly.*] By means of ice.

"Far-transported rocks, *glacially* polished and scratched on more than one side."—*Lyell: Student's Elements of Geology*, ch. xii.

* **glā-çĭ-ăr'-ĭ-ŭm** (or **çĭ** as **shĭ**), *s.* [Lat. *glaci(es)* = ice; neut. suff. *-arium.*] A room or enclosed space with a level flooring of artificial ice for skating on.

glā'-çĭ-āte (or **çĭ** as **shĭ**), *v.t. & i.* [Lat. *glaciatus*, pa. par. of *glacio* = to make or turn into ice, to congeal; *glacies* = ice.]

A. *Transitive:*

1. To convert into ice.
2. To act upon by means of ice.

"The probable date of the introduction of the contents into ossiferous caves in *glaciated* areas may be ascertained by an examination of the new deposits."—*Dawkins: Cave Hunting*, ch. xi.

B. *Intrans.:* To become ice. (*Johnson.*)

"First a *glaciating* degree of cold, and then the highest we could produce by art."—*Boyle: Works*, ii. 322.

glā-çĭ-ā'-tion (or **çĭ** as **shĭ**), *s.* [Fr. *glaciation.*]

1. *Ord. Lang.:* The act of congealing; the state of being congealed.

2. *Geol.:* The state of being acted upon by ice; ice-action. Used of a country or district, a stratum or a boulder. It consists chiefly of polished and furrowed rock-surfaces, of moraines, and erratic blocks.

"Beneath the drifts were unequivocal marks of prolonged *glaciation*."—*Lyell: Student's Elements of Geology*, ch. xii.

glăç'-ĭ-ẽr, *s.* [Fr., from Lat. *glacies* = ice.]

A. *As substantive:*

Physic. Geol., &c.: A river of ice slowly descending a mountain side. A glacier commences primarily as a frozen mass of snow, formed above the line of perpetual congelation, and consolidated partly by pressure and partly by the freezing of water infiltered into it from its surface. In the Swiss Alps the glaciers are between twenty and thirty miles long, their greatest breadth two or three miles, and their depth more than 600 feet. Why the glacier descends has been a very disputed question. Saussure attributed it to its weight, aided by the water beneath it. Charpentier and Agassiz to dilatation produced by the freezing of water in the interstices, a view which Hopkins opposed on mathematical and mechanical grounds. Agassiz and Prof. James Forbes discovered that the glacier, like an ordinary river, moved faster on the surface than below, and in the middle than at the sides. Forbes therefore believed that viscosity was the cause of the glacier's action. Tyndall attributed it chiefly to regelation, that is, to parts of it melting and freezing again. When, in descending a mountain-side, the glacier has to force its way through a narrow channel, the brittle ice is crushed and broken, but by virtue of "regelation" it freezes anew when it has cleared the obstruction, and constitutes a "Mer de Glace." Prof. Tyndall has imitated the whole process artificially on a small scale, and his is now the accepted explanation of glacier-movement. As a glacier descends, it carries with it stones, which, on its melting, are deposited in a moraine (q.v.) By these moving beneath it, and projecting from it, the subjacent rocks are polished and scored with parallel furrows. It makes also a dome-shaped mass of smoother rock, called in Switzerland *roches moutonnées* (q.v.). It scoops out lakes. [GLACIER-LAKE.] If it reach the sea, and descend into it, huge masses of it float off as icebergs. During the earlier part of the glacial-period, glaciers filled the whole valley between the Alps and the Jura. In this country they existed around Snowdon in Wales, around the Grampians in Scotland, &c.

"The *glacier's* cold and restless mass
Moves onward day by day."
Byron: Manfred, i. 1.

B. *As adj.:* Of, belonging to, produced by, or derived from a glacier.

glacier-dam, *s.*

Phys. Geog. & Geol.: A dam across a river produced by a glacier obstructing the passage of the waters.

"This old level is determined, not by the height of the *glacier-dam*."—*Lyell: Princip. Geol.* (11th ed.), ch. xvi.

glacier-erosion, *s.*

Phys. Geog. & Geol.: Erosion by means of glaciers. There is a glacier-erosion theory of lake basins. [LAKE.] (*Quar. Jour. Geol. Soc.*, xviii. 185; xxx. 479.)

glacier-fork, *s.*

Phys. Geog. & Geol.: A fork-like appearance produced by the junction of two glaciers which, after uniting, flow on together. At the point of junction they make cross grooves upon any flat surface over which they pass. This may be seen in Norway and elsewhere. (*Quar. Jour. Geol. Soc.*, xxix., 208.)

glacier-lake, *s.*

Phys. Geog. & Geol.: A lake produced temporarily or permanently by a glacier. It is noteworthy that glacier-lands like Switzerland are also lands abounding in lakes.

glacier-moraine, *s.*

Phys. Geog. & Geol.: A moraine deposited by a retreating or departed glacier. (*Quar. Jour. Geol. Soc.*, xx. 455.

glacier-mud, *s.*

Geol.: Boulder earth. An unstratified mass of coarse gritty mud, with pebbles, boulders, and stony particles on the surface of ice-worn rocks in Scotland and elsewhere. (*Quar. Jour. Geol. Soc.*, xxi. 166.)

glacier-valley, *s.*

Phys. Geog. & Geol.: A valley, the essential factor in the formation of which has been a glacier. (*Quar. Jour. Geol. Soc.*, xx. 454.)

glā-çĭ-êre', *s.* [Fr.]

Geol.: A cavern full of ice existing in a mountain land.

"We walked quickly away from the *glaciere*, agreeing that it was not improbable that in that part of the Jura there might be many hidden caves, containing more or less ice."—*G. F. Browne: Ice Caves*, ch. iv.

glā-çĭ-ō- (or **çĭ** as **shĭ**), *a.* in *comp.* [Lat. *glacies* = ice.] Pertaining to ice, as *glacio-aqueous* = pertaining to the combined action of ice and water.

glā'-çĭ-oŭs (or **çĭ** as **shĭ**), *a.* [Lat. *glaci(es)* = ice, and Eng., &c. suff. *-ous.*] Like ice; icy.

"Although exhaled and placed in cold conservatories, it will crystallize and shoot into *glacious* bodies."—*Browne: Vulgar Errours*, bk. ii., ch. i.

glā'-çĭs, *s.* [Fr., from *glace*; Lat. *glacies* = ice.]

1. *Fort.:* The superior slope of the rampart of the covered way, or, where the rampart does not exist, the declivity immediately in

GLACIS.

front of the ditch of a work, forming a gentle slope towards the country, and protecting the revetment of the escarp from the fire of an enemy.

2. *Geol.:* A gentle slope, not so steep as a talus.

glăd, ***gladde**, ***glade**, ***glead**, ***gleade**, ***gled**, *a. & s.* [A.S. *glæd* = shining, bright, glad; cogn. with Dut. *glad* = bright, smooth, sleek; Icel. *gladhr* = bright, glad; Dan. & Sw. *glad* = joyful, joyous; Ger. *glatt* = smooth, even; O. Fris. *gled* = smooth. From the same root as *glide* and *glow.*] [GLADE.]

A. *As adjective:*

1. Pleased; cheerful; gratified; feeling pleasure, joy, or satisfaction.

"I am right *glad* that he's so out of hope."
Shakesp.: Tempest, iii. 3.

¶ It is followed by *at*, or *of*, and formerly also by *with* before that which causes the pleasure or satisfaction.

"He *glad*
Of her attention, gained with serpent tongue,
His fraudulent temptation thus began."
Milton: P. L., ix. 531.

2. Expressive of or indicating pleasure or satisfaction; cheerful, joyful: as, a *glad* countenance.

"Ev'n adverse navies blessed the binding gale,
Kept down the *glad* acclaim, and silent joyed."
Thomson: Liberty, iv. 1,127.

3. Causing or affording pleasure, joy, or satisfaction; gladdening; joyful.

"I am sent to speak unto thee, and to shew thee these *glad* tidings."—*Luke* i. 19.

4. Wearing a gay or bright appearance; cheerful; bright; showy; gay.

"The wilderness and the solitary place shall be *glad* for them, and the desert shall rejoice and blossom as the rose."—*Isaiah* xxxv. 1.

5. It is used colloquially in a somewhat sarcastic sense.

"I would be *glad* to learn from those who pronounce that the human soul always thinks, how they know it."—*Locke.*

* **B.** *As subst.:* Gladness, joy, pleasure.

"Till fortune, tired with doing bad,
Threw him ashore, to give him *glad*."
Shakesp.: Pericles, ii. (Prol.)

¶ Crabb thus discriminates between *glad*, *pleased*, *joyful*, and *cheerful*: "*Glad* and *pleased* are both applied to the ordinary occurrences of the day; but the former denotes rather a lively and momentary sentiment, the latter a gentle but rather a more lasting feeling; we are *glad* to see a friend who has been long absent; we are *pleased* with the company of an intelligent and communicative person. *Glad*, *joyful*, and *cheerful*, all express ... lively sentiments; but *glad* ... *joyful*, and more so than *cheerful* ... seldom employed as an epithet ... things, except in the scriptural ... style; *glad* tidings of great joy; ... seldomer used to qualify persons ... we either speak of a *cheerful* ... *cheerful* person, a *cheerful* society, ... face, a *cheerful* sound, a *cheerful* ... the like." glăd´-ĭ-ā-tŏr, *s.* [Lat. = a swordsman, a fighter in the public games, a gladiator, from *gladius* = a sword.]

1. *Literally:*

Rom. Antiq.: One of a class of men whose profession was to fight in public for the entertainment of the people. They were armed with deadly weapons, and usually fought in pairs. The numbers of these men were principally recruited from prisoners of war, or refractory slaves sold by their masters to the *lanista* (or trainer). Malefactors also were occasionally condemned to fight as gladiators, and occasionally Roman citizens offered themselves voluntarily for hire, and to such the specific term *auctorati* was applied, their pay being called *auctoramentum*. Under the more worthless and dissolute emperors, equites, priests, and senators did not scruple to contend in the arena, in the hope of attracting the attention and gaining the favour of the prince; and even high-born women were found who consented to pander to the appetite for novelty, by fighting with each other or with dwarfs. Gladiators were divided into

Retiarius. Secutor.

GLADIATORS.

classes according to the manner in which they were equipped, and were in many cases named from the nation whose characteristic arms they bore. The representatives of different nations were frequently matched against each other, and the comparative efficiency of their weapons, offensive and defensive, was thus put to the test. The classes most frequently mentioned are—the *Thracians*, armed with a light circular buckler and short crooked cutlass; the *Mirmillones*, equipped as Gaulish warriors, with an oblong shield, curved to match the shape of the body. The *Retiarii* were armed with a net (*rete*) and a kind of three-pointed spear or trident with a long handle, but were destitute of defensive armour; they were usually paired with a heavy-armed opponent, a *mirmillo* for example, who was in this case designated *secutor* (from Lat. *sequor* = to follow); the *retiarius*, being no match for his antagonist in a hand-to-hand fight, endeavoured, as the latter approached, to throw his net so as to entangle him in its meshes, and, if successful, stabbed him with the trident before he could extricate himself. If the cast failed he was compelled to take to flight, was chased by the *secutor* (and hence the name), and if overtaken easily despatched. If, however, the *retiarius* contrived to evade his pursuer until he was prepared for a second throw, then the contest was renewed as at first, and continued until one or the other was baffled or exhausted. If one of the combatants was wounded so as to be unable to continue the fight, the life or death of the wounded man, who held up his finger in token of submission, depended upon the pleasure of the president, who usually, as a matter of courtesy, referred it to the spectators, who signified their decision by raising or depressing their thumbs, accordingly as they wished him to be killed or saved. There were regular academies devoted to the instruction of these prize-fighters, in which novices were taught the principles of their art by fighting with heavy wooden swords. Originally, gladiatorial contests were fought at the funerals of distinguished persons, but in time they came to form a part of every important public solemnity or festival, and were even introduced occasionally at private banquets.

glāi´-zĭe, *a.* [GLOSSY.]

glā´-ma, glāme, *s.* [Gr. γλαμάω (*glamaō*) for λημάω (*lēmaō*) = to be blear-eyed, purblind; λήμη (*lēmē*) = a humour that gathers in the corner of the eye, gum, rheum.]

Pathol.: (For def. see etym.).

glăm′-oŭr, * glăm′-ĕr, *s.* [Icel. *glamr* = a legendary ghost or spirit.]

1. The influence of some charm on the eye, causing it to see things differently from what they really are; a magical deception of sight.

"But deil o' sic a story as yours, wi' *glamour* and dead folk, and losing ane's gate. I ever heard out o' the tale books."—*Scott: Guy Mannering*, ch. xlv.

* 2. Witchcraft; magic.

"Like that maiden in the tale
Whom Gwydion made by *glamour* out of flowers."
Tennyson: Enid, 743.

3. A kind of haze covering objects, and causing them to appear differently from what they really are.

glançe, * glaunce, *s.* [Sw. *glans* = lustre, brightness, *glänsa* = to shine; Da. *glands* = lustre, brightness, *glandse* = to gloss, glaze; Dut. *glans* = lustre, *glanzen* = to put a gloss upon; Ger. *glanz* = splendour, *glänzen* = to glitter, all being nasalized forms from the same root as *glitter*. (*Skeat*.)] [GLINT.]

I. *Ordinary Language:*

1. A sudden shoot or dart of light or splendour; a flash.

"Each sword's bright *glance*, seemed summons from their fate." *Stirling: Jonathan.*

2. A sudden look or casting of the eyes; a momentary and rapid view or look.

"The courtiers who filled the outer room communicated their suspicions to each other by whispers and significant *glances*."—*Macaulay: Hist. Eng.*, ch. iv.

3. A slight touch; a graze.

"For they saile away, being not once touched with the *glaunce* of a shot."—*Hackluyt: Voyages*, ii. 134.

4. A transient or passing turning of the attention; a slight notice or attention to any subject in passing.

"How fleet is a *glance* of the mind!"
Cowper: Verses attributed to A. Selkirk.

5. A hint, a reflection.

II. *Min.:* A term used either as the first or as the second word of various compounds. It implies that the minerals thus characterized have a splendent metallic lustre.

¶ For the difference between *glance* and *glimpse*, see GLIMPSE; for that between *glance* and *look*, see LOOK.

glance-coal, *s.*

Min.: The same as ANTHRACITE (q.v.).

glance-copper, *s.*

Min.: The same as CHALCOCITE.

glançe, * glaunce, *v.i.* & *t.* [GLANCE, *s.*]

A. *Intransitive:*

1. To shoot or dart a sudden flash of brightness or splendour; to flash.

"Now flashing wide, now *glancing* as in play,
Swift beyond thought the lightnings dart away."
Cowper: Truth, 242.

2. To move rapidly about, so as to cause flashes of colours; to dart about; to appear and disappear quickly.

"The mute fish that *glances* in the stream."
Wordsworth: Excursion, bk. ii.

3. To move or fly off in an oblique direction; to be turned aside during motion.

"The damnèd arrow *glanced* aside."
Tennyson: Oriana, 41.

* 4. To be turned aside, so as to miss that which is aimed at.

"The jest did *glance* away from me."
Shakesp.: Taming of the Shrew, v. 2.

5. To look with a sudden and rapid cast of the eye; to snatch a hasty or passing view of any object.

"Doth *glance* from heaven to earth."
Shakesp.: Midsummer Night's Dream, v.

6. To make an incidental or passing remark on; to notice briefly in passing; to refer to briefly.

7. To hint at; to censure by hints or allusion. (Followed by *at*.)

"Cæsar's ambition shall be *glanced at*:
And, after this, let Cæsar seat him sure."
Shakesp.: Julius Cæsar, ii. 2.

B. *Transitive:*

1. To shoot or dart suddenly or momentarily; to cast for a moment.

"He *glanced* a look of holy pride."
Wordsworth: White Doe of Rylstone, ii.

2. To refer to briefly or incidentally; to hint at.

"In company I often *glanced* it."
Shakesp.: Comedy of Errors, v.

glanç′-ĕr, *s.* [Eng. *glanc(e)*; *-er*.] One who glances; one who casts a glance.

"The *glancer* or smiler is a certain Lady Ridgeway."—*Athenæum*, March 4, 1882, p. 279.

glanç′-ĭng, * glaun-synge, *pr. par., a.,* & *s.* [GLANCE, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

1. The act of casting a hasty or momentary look upon; a referring or alluding to anything briefly.

2. The state of being turned aside out of the direct course.

glanç′-ĭng-lȳ, * glaunc-ing-ly, *adv.* [Eng. *glancing*; *-ly*.] In an oblique manner; incidentally, indirectly; not directly.

"Sir Richard Hawkins hath done something in this kind, but brokenly and *glancingly*."—*Hakewill.*

glănd, *s.* [Fr. *glande*, from Lat. *glans* (genit. *glandis*) = a nut-like fruit, as an acorn, a beech-nut, a chestnut, &c.]

1. *Anat.:* A term at first vaguely applied to any smooth round viscus, but which is now limited to such of the seas secrete—*i.e.*, separate by a process of cell-growth, certain constituents of the blood which are afterwards poured out from the gland by means of a duct. While yet the term glands was vaguely used, Sylvius divided them into conglobate and conglomerate glands. To these Malpighi added the follicular or simple glands found in the fauces and behind the ears. They are now divided into secreting and lymphatic glands (q.v.). (*Parr, Huxley*, &c.)

"The *glands*, which o'er the body spread, . . .
The rapid motion of the blood obstruct."
Blackmore: Creation.

2. *Bot.* (*Pl.*): Cells or aggregations of cells distinguished from those in their neighbourhood by containing resinous, oily, sugary, or fragrant substances. The walls of the cells generally become degenerated, and are ultimately dissolved, a cavity being thus formed as seen in the rind of the orange and lemon. In other cases the secretion is discharged externally. Ordinary glands occur in almost all the tissues of plants. Nectaries or honey-secreting glands of flowers are superficial, and are met with on all parts of the flower and receptacle. Mirbel divides glands into vascular glands, in which there are cells and vessels united, and cellular glands, which consist of cellular tissue alone. Glands may be simple, compound, internal, lenticular, sessile, or stalked, &c. (*McNab*, &c.)

3. *Found.:* A hooked bar by which the parts of a moulder's flask are clamped together.

4. *Machinery:*

(1) A contrivance consisting of a cross-piece or clutch for engaging or disengaging machinery moved by belts or bands.

(2) A plate through which the ends of a band or tightening clevis pass; a clip-plate.

5. *Steam Engin.:* The cover of a stuffing-box.

¶ (1) *Ductless* or *Vascular Glands:*

Anat.: Certain bodies resembling glands in form, but not possessing ducts for secretion, so that their products must be conveyed to them by lymphatic or sanguiferous vessels. Examples, the spleen, the thyroid body, the thymus gland, the suprarenal capsules, the pituitary body, the follicular glands at the root of the tongue and the lymphatic glands. (*Quain.*)

(2) *Follicular* or *Simple Glands:*

Anat.: [GLAND, 1].

(3) *Lymphatic Glands:*

Anat.: [LYMPHATIC].

(4) *Secreting Glands:*

Anat.: The typical kind of glands to which the name is now very frequently restricted. They collect and discharge at particular parts various matters derived from the organism, that these may be further employed for special purposes in the economy, or simply eliminated as redundant material or waste products. In the latter case the term used is excretion. In this process the nucleated cell takes a prominent part. When there is a simple recess formed of secreting membrane, the gland is said to be simple. Examples of this structure occur in the mucous membrane of the stomach, the intestines, &c. When the cavity is subdivided as well as extended with the view of increasing the secreting surface, the gland is said to be compound. The latter are again sub-divided into first tubular and second saccular or racemose glands. The glands of the testicle and those of the kidney are tubular; the salivary, lachrymal, and mammary glands, and most of the glands opening into the ... the fauces, and the windpipe are ... glands. They and some others ... the conglomerate glands of Sylvius. ... (*Quain.*)

(5) *Simple Glands:* [¶ (2); ... No. 1 and 2].

(6) *Vascular Glands:* [¶ (1)].

glănd-u-lā'-tion, *s.* [Eng. *glandul(e)*; *-ation.*]

Bot.: The arrangement and structure of the glandules in certain plants.

glănd'-ule, glăn'-du-la (pl. **glăn'-du-læ**), *s.*

Anat. & Bot.: A little gland. In Anatomy there are *glandulæ ceruminosæ*, a *glandula lacrymalis*, &c.; in Botany, *glandulæ hypogynæ*, *hypogynous glandules*, &c.

"Nature hath provided several *glandules* to separate this juice from the blood."—*Ray: On the Creation*, pt. ii.

glănd-u-lĭf'-ĕr-oŭs, *a.* [Lat. *glandul(a)* (q.v.); *fero* = to bear, and Eng., &c. suff. *-ous.*] Bearing many glandules, or simply bearing glandules.

glănd'-u-lōse, *a.* [Lat. *glandulosus* = full of kernels, glandulous.] The same as GLANDULOUS (q.v.).

* **glănd-u-lŏs'-ĭ-tў,** *s.* [Eng. *glandulos(e)*; *-ity.*]

1. The state of being glandulose.

2. A glandule.

"In the upper part of worms are found certain white and oval *glandulosities*."—*Browne: Vulgar Errours*, bk. iii., ch. vii.

glăn-du-lŏ-so-, *pref.* [Lat. *glandulosus.*]

Bot., &c.: Glandulose, glandulous.

glanduloso-serrate,

Bot.: Having serratures lipped by glands.

glănd'-u-loŭs, *a.* [Lat. *glandulosus* = full of kernels.]

1. Full or abounding in glands; or simply provided with glands, containing glands.

"All glands and *glandulous* parts do likewise consist of fibres, but of the softer kind."—*Grew: Cosmologia Sacra*, bk. i., ch. v., § 18.

2. Pertaining to glands.

3. Resembling glands.

glăns, *s.* [Lat. = the nut-like fruit of some forest trees; an acorn, a beechnut, a chestnut, &c.]

1. *Bot.*: A fruit sometimes, though rarely, called in English a gland, placed by Lindley in his class called Syncarpi, and the section of it with inferior fruit. It is hard, indehiscent, dry, one-celled, with one or few seeds. It is developed from an ovary having several cells and several seeds, all of which are abortive except one or two. It is situated within the kind of persistent involucre called a cupule. The pericarp is crowned with the remains of the calyx teeth, but being minute they easily escape observation. Sometimes the glans is solitary, as in the oak; at others there are more than one of them in the cupule, as in the sweet chestnut and the beech. (*Lindley.*)

2. *Anat.*: Any structure of somewhat similar form.

The integument adheres . . . to the spongy tissue of the *glans*."—*Quain: Anatomy*, i. 431.

glă-phyr'-ĭ-a (yr as ïr), *s.* [Gr. γλαφυρία (*glaphuria*) = smoothness, polish; γλαφυρός (*glaphuros*) = hollow, hollowed; γλάφω (*glapho*) = to hew, to carve.]

Bot.: A genus of Myrtleblooms, tribe Myrteæ. *Glaphyria nitida* is called by the Malays the tree of long life, from ascending on the hillside higher than any other tree. The natives of Bencoolen call it the tea-plant, and use it as a substitute for tea. (*Lindley.*)

* **glāre** (1), *s.* [GLAIR.]

glāre (2), *s.* [GLARE, *v.*]

1. An overpowering lustre or light; any dazzling splendour or brightness.

"[One] visual nerve shrinks from a painful *glare*
Of overpowering light."
Wordsworth: Excursion, bk. vi.

2. A fierce piercing look or stare.

"About them round
A lion now he stalks with fiery *glare*."
Milton: P. L., iv. 402.

glāre, * **glar-yn,** * **glore,** *v.i. & t.* [Etym. doubtful, but probably an English word; cf. A.S. *glær* = a transparent substance, amber; cogn. with Dut. *gloren* = to glimmer; Icel. *glóra* = to gleam, to glare; M. H. Ger. *glosen* = to shine, to glow. Closely related to *glass*. (*Skeat.*)]

A. *Intransitive*:

1. To shine with a dazzling or overpowering light, lustre, or brightness.

"Strong perfumes and *glaring* light
Oft destroy both smell and sight."
Carew: To my Cousin.

2. To look with fierce, piercing eyes; to stare wildly or fiercely.

"The lion and fierce tiger *glared* aloof."
Milton: P. R., i. 313.

3. To have a dazzling effect; to shine with excessive brightness; to displease or offend by gaudiness or over-colouring. [GLARING.]

"He maintains majesty in the midst of plainness; he shines but *glares* not."—*Dryden.*

* **B.** *Trans.*: To shoot or dart out in fierce flashes.

"One spirit in them ruled, and every eye
Glared lightning." *Milton: P. R.*, vi. 849.

¶ For the difference between to *glare* and to *shine*, see SHINE.

glār'-ĕ-ō-la, *s.* [Dimin. of Gr. γλάρος (*glaros*), λάρος (*laros*) = a ravenous sea-bird, perhaps the cormorant (?); Fr. *glaréole.*]

Ornith.: The typical genus of the sub-family Glareolinæ (q.v.). *Glareola pratincola* is the Pratincole (q.v.).

glār-ĕ-ŏ-lī'-næ, *s. pl.* [Mod. Lat. *glareol(a)*; Lat. fem. pl. adj. suff. *-inæ.*]

Ornith.: A sub-family of Charadriidæ. The bill is short, much compressed, arched, and deeply cleft. The wings are long and narrow, the tail usually forked. The toes four, the middle toe and claw very long, the hinder one elevated, but touching the ground.

glār'-ĕ-ōse, *a.* [Lat. *glareosus* = full of gravel, gravelly; *glarea* = gravel.]

Bot.: Growing in gravelly soil or places.

glār'-ĕ-oŭs, *a.* [GLAIROUS.]

* **glār'-ĭ-nĕss,** *s.* [Eng. *glary*; *-ness.*] The quality or state of being glary; glaringness.

"Bright crystal glass is glary; and to avoid that *glariness*, our artificers run into the other extreme."—*Boyle: Works*, vol. vi., p. 135.

glār'-ĭng, *pr. par., a., & s.* [GLARE, *v.*]

A. *As pr. par.*: (See the verb).

B. *As adjective*:

I. *Literally*:

1. Shining with a dazzling or overpowering brightness or lustre; staring or looking fiercely.

2. Displeasing or offending the taste by gaudiness or ostentatious colours; to be too conspicuous or overcoloured.

"The most *glaring* and notorious passages are none of the finest."—*Felton: On the Classicks.*

II. *Fig.*: Notorious, barefaced, infamous, notorious: as, a *glaring* falsehood.

¶ Crabb thus discriminates between *glaring* and *barefaced*: "*Glaring* designates the thing; *barefaced* characterizes the person; a *glaring* falsehood is that which strikes the observer in an instant to be falsehood; a *barefaced* lie or falsehood betrays the effrontery of him who utters it. A *glaring* absurdity will be seen instantly without the aid of reflection; a *barefaced* piece of impudence characterizes the agent as more than ordinarily lost to all sense of decorum." (*Crabb: Eng. Synon.*)

glār'-ĭng-lў, *adv.* [Eng. *glaring*; *-ly.*]

1. In a manner so as to offend the taste by overcolouring or by being too conspicuous.

"Yet there we ne'er condemn such hostile hues
As cut the parts or *glaringly* confuse."
Mason: Du Fresnoy: Art of Painting.

2. In a barefaced, notorious, or shameless manner; barefacedly, openly.

"Mr. Hobbes has been reputed the first or principal man . . . that openly and *glaringly* espoused them."—*Waterland: Works*, viii. 41.

glār'-ĭng-nĕss, *s.* [Eng. *glaring*; *-ness.*] The quality or state of being glaring.

"The *glaringness* of his prose." — *Jarvis: Don Quixote*, pt. i., bk. i. ch. i.

* **glār'-ў,** * **glar-ie,** *a.* [Eng. *glare*; *-y.*] Of a dazzling or overpowering brightness or lustre; glaring.

"In the winter time, so *glarie* is the ground,
That neither grass, nor other graine, in pastures may be found."
Turberville, i. 386.

* **glas,** *s.* [GLASS.]

* **glase** (1), *v.i.* [GLOZE.]

* **glase** (2), *v.t.* [GLAZE.]

* **glas-en,** * **glas-un,** *a.* [GLAZEN.]

glaş'-ĕr-īte, *s.* [Named after a chemist, Christopher Glaser, who flourished about A.D. 1664, the salt having long ago been called *sal polychrestum Glaseri.*]

Min.: The same as Aphthitalite (q.v.). The *Br. Mus. Catalogue* prefers the name Glaserite, and makes Aphthitalite the synonym.

* **glas-fat,** * **glæs-fat,** *s.* [A.S. *glæsfæt*; O. H. Ger. *glasfaz*; M. H. Ger. *glasevaz*; Ger. *glasgefäss.*] A glass vessel or pot.

"Anne while after than that *glasfat* an honden nom." *Layamon*, ii. 319.

glas'-ītes, *s. pl.* [GLASSITES.]

* **glas-inge,** *s.* [GLAZING.]

glass, * **glas,** * **glase,** * **glasse,** * **gleas,** * **gles,** * **glese,** *s. & a.* [A.S. *glæs*; cogn. with Dut. *glas*; Dan. *glas*, *glar*; Sw. *glas*; Icel. *gler*, *glas*; Ger. *glas*; O. Sw. *glas*, *glær*; O. H. Ger. *clas.*]

A. *As substantive*:

I. *Ordinary Language*:

1. *Literally*:

(1) In the same sense as II. 2.

(2) A glass vessel or instrument of any kind, as

(*a*) A mirror; a looking-glass.

"Whoever in those *glasses* looks, may find
The spots returned, or graces, of his mind."
Waller: Upon Ben Jonson.

(*b*) A drinking-vessel or cup made of glass.

"To this last costly treaty,
That swallowed so much treasure, and like a *glass*
Did break in the rinsing."
Shakesp.: Henry VIII., i. 1.

(*c*) An optical instrument composed partly of glass; a telescope.

"The moon whose orb
Through optick *glass* the Tuscan artist views."
Milton: P. L., i. 288.

(*d*) A glass vessel partially filled with fine sand for measuring time; an hour-glass.

"Were my wife's liver
Infected as her life, she would not live
The running of one *glass*."
Shakesp.: Winter's Tale, i. 2.

(*e*) An instrument, composed partly of glass, for indicating atmospheric changes; a barometer; a thermometer.

(*f*) (*Pl.*) A pair of spectacles or eye-glasses.

(3) The quantity which a glass drinking-vessel will hold.

"Your son should never chat over a *glass* of wine till midnight."—*Locke: On Education*, § 21.

* 2. *Fig.*: The time in which the sand of man's life runs out; the allotted life of man.

II. *Technically*:

1. *Chem.*: A substance or mixture, earthy, saline, or metallic, brought by fusion to the state of a hard, brittle, transparent mass, with a conchoidal fracture.

2. *Comm.*: A hard, brittle, transparent substance, formed by fusing together mixtures of the silicates of potash, soda, lime, magnesia, alumina, and lead in various proportions, according to the quality or kind of glass required.

Flint-glass is used in making table ware and many articles of domestic furniture and fittings. The molten glass is taken from the pot by a ponty, and is blown or pressed into shape, or, by a combination of operations, is held in a mould while being blown. Its density is 3. Crown and flint-glass are combined in the manufacture of achromatic lenses.

Crown-glass is taken by the ponty from the pot, and is then blown and whirled until it becomes globular. A ponty tipped with molten glass is applied to the bulb, the blowing-tube detached, leaving a hole. The globe being again whirled, the glass flashes into a circular disk, adhering by a boss in its centre to the ponty. Its density is 2·5.

Sheet-glass is glass withdrawn by the ponty from the pot and blown and whirled till it assumes a cylindrical form. The ends being cut off, and the cylinder slit longitudinally, the sheet is heated, pressed, and rubbed until it is flattened out. This is also called cylinder-glass or broad-glass.

Plate-glass is made by pouring it upon a table which has a marginal edge of a height equal to that designed for the thickness of the glass. A roller travels over the table, resting on the ledges and flattening out the glass, which is thus made of equal thickness throughout.

Bottle-glass has nothing peculiar in the mode

of its manufacture, but is made of coarse ingredients.

¶ Pliny reports that some mariners with a cargo of "nitrum" (soda or some other salt), having landed near the mouth of a small stream, at the base of Mount Carmel, in Palestine, lit a fire, using some blocks of the salt for a grate. The heat fused the sand and the salt together, and produced glass, which then for the first time become known. The occurrence may have happened, but glass was known in Egypt, and represented on the monuments, as early as the time of Osirtasen, B.C. 1740. Remains have been found also in the ruins, not merely of Egyptian, but of Assyrian, Greek, Roman, and Etruscan cities. The ancients used it for bottles; for instance many lachrymatories of it have been found. Gregory of Tours says that in the fourth century churches had coloured glass windows. In 1458 Æneas Sylvius mentioned, as a proof of the wealth of Vienna, that the houses of the inhabitants had glass windows. In 1557 it began to be manufactured in England. The first window-tax was imposed in 1695. It was increased six times between that date and 1808, reduced in 1823, and abolished in 1851, the inhabited house-duty being imposed in its stead.

3. *Naut.:* The half-minute or quarter-minute sand-glass used with the ship's log; also the half-hour or sand-glass which regulates the watches; the time in which one of such glasses is emptied of its sand.

"Past the mid-season: at least two *glasses*."
Shakesp.: Tempest, i. 2.

glass annealing-furnace, *s.* A furnace in which articles or sheets of glass are kept for a while in a heated condition, and allowed gradually to cool; a leer.

glass-blower, *s.* One whose business or trade is to blow or fashion glass.

Glass-blower's lamp: A gas or alcohol lamp.

glass-blowing, *s.* A mode of manufacturing glass-ware and window-glass by taking a mass of viscid glass from the melting-pot on the end of the blowing-tube, and then inflating the mass by blowing through the tube, rolling on the marver, and exposing it at the furnace opening where its contained air is expanded and itself enlarged.

glass-case, *s.* A case or shallow box having a glass lid or cover, and sides, so as to enable the contents to be seen without opening the case.

glass-cavity, *s.*

Min.: A cavity in a mineral containing a glassy substance. These cavities are sometimes found in crystals of leucite. (*Quar. Jour. Geol. Soc.*, xxxi., § 394.)

glass-cloth, *s.*

Fabric: A fabric produced by interweaving fabrics of glass, which are, in a very attenuated state, extremely flexible.

* **glass-coach,** *s.*

1. *Orig.:* A carriage of the superior order. The term is now obsolete, but it originally expressed that the vehicle had glass windows instead of opaque panels or curtains.

2. *Later:* (For def. see extract).

"*Glass-coaches* are [admitted into the English parks]: meaning by this term, which is never used in America, hired carriages that do not go on stands." —*J. F. Cooper: Miles Wallingford*, ch. x.

glass-colouring, *s.* The act or art of tinting glass by incorporating metallic oxides in its substance; thus oxide of cobalt imparts a deep blue colour; protoxide of copper, green; oxide of gold, a ruby red, &c. Coloured glass is known as flashed, or as pot-metal; in the former case a film of coloured glass is laid over the white; in the latter, the colour is stirred up with the metal in the pot, imbuing its whole substance.

glass-crab, *s.*

Zool.: A crustacean which received its name from its transparency, while, on account of its very much flattened and membranous body, it was called by Leach, Phyllosoma. It is now known to be an immature state of the Podophthalmata (q.v.).

glass-cutter, *s.* One whose business or occupation is to cut glass, or to grind it down into various ornamental shapes; an instrument for cutting glass.

glass-cutting, *s.* The art or process of cutting, shaping or modifying the surface of glass by mechanical means, as by revolving wheels of iron, stone, or wood supplied with sand and water, or by means of a blast of air or steam carrying a stream of sand, which is directed upon the part to be cut or bored.

glass-enamel, *s.* A term applied to a semi-lucid or an opaque glass, which owes its milkiness to the addition of binoxide of tin. The transparencies which are hung in windows or form shades for lamps are of this semi-lucid character, and are miscalled porcelain transparencies. Watch-dials have an opaque, glass-enamelled face on a metallic backing.

glass-eye, *s.*

1. *Ord. Lang.:* A ball or shell of glass, coloured to represent a human eye, and worn by persons who have lost an eye.

2. *Ornith.:* The name given in Jamaica to a thrush, *Turdus jamaicensis*, which has a pellucid glass-like eye.

Glass-eye berry: A berry on which the Glass-eye feeds.

* **glass-faced,** *s.* Reflecting, like a mirror, the looks of another: as, a *glass-faced* flatterer. (*Shakesp.: Timon*, i. 1.)

glass-furnace, *s.* A furnace in which the materials of glass are fused.

glass-gall, *s.* [SANDIVER.]

* **glass-gazing,** *a.* Often contemplating oneself in a mirror.

"A whoreson, *glass-gazing*, super-serviceable, finical rogue."—*Shakesp.: Lear*, ii. 2.

glass-grinder, *s.* The same as GLASS-CUTTER (q.v.).

glass-grinding, *s.* The same as GLASS-CUTTING (q.v.).

glass-hive, *s.* A hive composed wholly or in part of glass.

glass-maker, *s.* One whose business or trade is to make glass.

Glass-maker's soap: A name given to manganese, from its cleansing action in its association with glass-making materials. It is used to rid the materials of colour arising from carbonaceous matters and protoxide of iron. An excess of it gives a purple tinge to the glass.

glass-mosaic, *s.* An imitation of antique mosaic work, formed of small cubes of glass mixed with various colouring matters, chiefly metallic oxides, so as to form opaque coloured enamels, which are cast into slabs or flat cakes, the slab being afterwards cut into very small cubes or rectangular pieces. With these little coloured cubes a picture is built up, by inserting each one separately in a bed of cement.

glass-mould, *s.* A metallic shaping-box in which glass is pressed or blown to form.

glass-oven, *s.* A heated chamber in which just-made glass in sheets or ware is placed to cool gradually. A glass-annealing furnace; a leer.

glass-painter, *s.* One who produces designs in colours on glass.

glass-painting, *s.* Glass-painting is thus distinguished from glass-staining; the former has a design painted upon it with colours which are burnt in; the latter receives its colour in the process of manufacture, or the separate pieces are coloured after having been cut to the required shapes out of white glass. In one case it is a painting of enamelled colours on sheets of glass; in the other it is a painting made up of pieces having the required colours, fitting together and held by leaden cames. [GLASS-STAINING.] There are four methods: 1. The mosaic, the earliest. 2. The mosaic stain. In this mode the window is made up of detached pieces, as in the mosaic; but the shades are given by a stain of brown, which seems to have been the first colour which the artists succeeded in firing on to the pieces of glass. 3. The enamel. By this all the required colours are painted upon the same piece of glass and fired in the kiln, producing the effect of an oil-painting. 4. The mosaic enamel. In this mode coloured glass is used as a groundwork to paint on, instead of white.

glass-paper, *s.* A polishing [illegible] of paper thickly strewn with [illegible] glass. The fragments of broken [illegible] &c., are carefully washed [illegible] glass is crushed under a [illegible] sifted into six sizes, as [illegible] emery. It is sifted through [illegible] cloth, which are generally [illegible] bolts of flour-mills. The [illegible] sixteen to ninety wires to the inch. [illegible] of thin glue is spread on the [illegible] pulverised glass dusted over it [illegible]

glass-press, *s.* A device to [illegible] sure to glass in a mould while [illegible]

glass-rope, *s.*

Zool.: Hyalonema, a genus of [illegible] sponges, consisting of a [illegible] affixed to a muddy part of the [illegible] means of a rope of long [illegible] fibres.

glass-shade, *s.* A cover of [illegible] over artificial flowers, or articles [illegible] protect them from the dust; [illegible] lamps, &c., to modulate and [illegible]

glass-shell, *s.*

Zool.: Hyalea or Hyalea, a [illegible] poda, with a translucent shell.

glass-shrimp, *s.*

Zool.: Erichthys, a genus of [illegible] order Stomapoda.

glass-silvering, *s.* The [illegible] ing glass with silver, mercury, &c., [illegible] form mirrors. [MIRROR.]

glass-snail, *s.*

Zool.: Vitrina, a genus of [illegible] Helicidæ. *Vitrina pellucida* and [illegible] species occurs in Britain.

glass-snake, *s.*

Zool.: *Ophisaurus ventralis.* [illegible] the family Zonuridæ, or Chalcid[illegible] absence of feet, they look like [illegible] are found in America. The [illegible] is supposed to allude to the [illegible] tail.

glass-soap, *s.* [GLASSMAKER'S [illegible]

glass-stainer, *s.* One who [illegible] trade or occupation of glass-[illegible]

glass-staining, *s.* The art [illegible] of colouring glass during the [illegible] manufacture.

glass-stopper, *s.* A stopper [illegible] for bottles, made of glass.

glass-tears, *s. pl.* [RUPERT'S [illegible]

glass-tongs, *s. pl.* Grippers [illegible] bottles, &c., in course of [illegible] handling bottles containing [illegible] mixtures.

* **glāss,** *v.t.* [GLASS, *s.*]

1. To see or look at in a glass [illegible]

"The formal youth, that [illegible] Or value, but his [illegible] *Glasses* himself."
L'Estrange: [illegible]

2. To reflect or show as in a glass [illegible]

"Wherein is *glassed* [illegible]
Byron: [illegible]

3. To case or enclose in glass.

"Methought all his senses were lockt in [illegible]
As jewels in crystal for [illegible]
Who tend'ring their own worth, [illegible] were *glass'd*,
Did point out to buy them, [illegible]
Shakesp.: Love's Labour [illegible]

4. To cover as with glass; to [illegible]

"I have observed little grains of [illegible] the small cavities, perhaps *glassed* [illegible] heat."—*Boyle.*

* **glass'-chord,** *s.* [Eng. *glass*, and [illegible]

Music: A musical instrument [illegible] a pianoforte, but with bars of glass [illegible] strings of wire.

* **glass-en,** * **glas-en,** * **glas-un,** [illegible] * **gles-ene,** *a.* [A.S. *glæsen*.] [illegible] resembling glass; glazed, glassy.

"[He] [illegible]
The dice with *glassen eyes*."
Ben Jonson: [illegible]

glass'-ĕş, *s. pl.* [GLASS.] Spectac[illegible]

glass'-fûl, *s.* [Eng. *glass*; *-ful(l)*.] [illegible] of anything as a glass will hold.

glass'-hŏuse, *s.* [Eng. *glass*, and *house*.]

I. *Ordinary Language:*

1. A house or building where glass is made; glassworks.

"I remember to have met with an old Roman mosaic composed of little pieces of clay half vitrified, and prepared at the *glasshouses*."—*Addison: On Italy.*

2. A house built entirely or chiefly of glass; a conservatory.

II. *Fig.:* A position open to attack or to unfavourable criticism: hence the proverb, Those who live in *glasshouses* should not throw stones.

***glass'-ĭ-lĭ,** *adv.* [Eng. *glassy*; *-ly*.]

1. So as to resemble glass.

2. With glassy eyes.

"Vance stared *glassily* around him."—*Mortimer Collins: From Midnight to Midnight*, vol. iii., ch. x.

glass'-ĭ-nĕss, *glass'-ĭ-nĕss, *s.* [Eng. *glassy*; *-ness*.] The quality or state of being glassy, a vitreous appearance.

"The *glassyness* of the surface."—*Smollett: France & Italy*, lett. xxxi.

glass'-ĭng, *s.* [Eng. *glass*; *-ing*.]

Leather-manuf.: The operation of dressing leather on the grain side by a tool consisting of a glass slip set in a wooden handle.

Glass'-ĭtes, Glas-ĭtes, *s. pl.* [For etym. see def.]

Ch. Hist.: A Christian sect founded by the Rev. John Glas, minister of the (Presbyterian) Established Church of Scotland at Tealing, near Dundee. In 1728, he published a book called "The Testimony of the King of Martyrs concerning His Kingdom" (John xviii. 36), in which he opposed the establishment of national churches. Having been deposed, in 1729, by the Synod of Angus, he thereupon founded the sect called after his name. With regard to faith he believed it to be an intellectual act of assent to the Divine testimony. In 1753 Mr. Sandeman, his son-in-law, embraced his opinions, carrying them to a more extreme length. In 1760 the son-in-law removed to London, and in 1764 to America. Being better known in these places than Mr. Glas, the churches were called Sandemanian. In the census of 1851 there were six in England. In the Registrar-General's list of registered places of worship, in 1883, the Glassites and the Sandemanians figure as distinct sects. [SANDEMANIANS.]

glass'-lĭke, *a.* [Eng. *glass*, and *like*.] Like or resembling glass; glassy; of a vitreous appearance.

"For by example most we sinned before,
And *glasslike* clearness mixed with frailty bore."
Dryden: Astræa Redux, 208.

***glass'-măn,** *s.* [Eng. *glass*, and *man*.] One who deals in glass.

"The profit of glasses consists only in a small present made by the *glassman*."—*Swift.*

glass'-mĕt-ăl, *s.* [Eng. *glass*, and *metal*.] Glass in fusion in the pot.

"Let proof be made of the incorporating of copper or brass with *glassmetal*."—*Bacon: Physical Remains.*

glass'-pŏt, *s.* [Eng. *glass*, and *pot*.] The pot in which the frit is fused into glass. They are made of pure refractory clay, mixed with about one-fifth its weight of old pots pulverised by grinding, are built up instead of being formed on a mould, and baked by being subjected to a white heat.

glass'-wăre, *s.* [Eng. *glass*, and *ware*.] Articles or utensils manufactured of glass.

glass'-wŏrk, *s.* [Eng. *glass*, and *work*.]

*1. The manufacture of glass.

2. Articles or utensils manufactured of glass; glassware.

3. (*Pl.*) A place or building where glass is manufactured.

"They crush the ashes into lumps like a stone, and so sell them to the Venetians for their *glassworks*."—*Bacon: Natural History.*

***glass'-wŏrm,** *s.* [Eng. *glass*, and *worm*.] A glowworm.

glass'-wŏrt, *s.* [Eng. *glass*, and *wort*.]

Bot.: Salicornia, a genus of flowerless plants growing in salt marshes. Two species are British, the Jointed Glasswort (*Salicornia herbacea*), and the Creeping Glasswort (*S. radicans*).

"For the fine glass we use the purest of the finest sand, and the ashes of chall or *glasswort*."—*Browne: Vulgar Errours.*

glass'-ў, *glass-ĭe, *glas-y, *a.* [Eng. *glass*; *-y*; *-ie*.]

1. Made of glass.

"Honour is like that *glassy* bubble
That finds philosophers much trouble."
Butler: Hudibras, pt. ii. c. ii.

2. Resembling glass in lustre or some other quality.

"His conscience, like a *glassy* lake before,
Lashed into foaming waves, begins to roar."
Cowper: Truth, 259.

3. Dull; lacking fire or life; applied to the eyes.

glassy-felspar, *s.*

Min.: The same as SANIDINE (q.v.).

Glas'-tŏn-bŭr-ў (*t* silent), *s.* & *a.* [See def.]

A. *As substantive:*

Geog.: A town in Somersetshire, the seat of a celebrated abbey, now in ruins.

B. *As adj.:* Of or belonging to the town or abbey mentioned under A.

Glastonbury-thorn, *s.*

Hort.: A variety of the hawthorn flowering about Christmas. Said to have been introduced by the monks of the abbey.

glâub-ăp'-ą-tīte, *s.* [Eng. *glaub(er)*, and *apatite*.]

Min.: A variety of Apatite, in colour yellowish-brown to chocolate-brown, from Monk's Island.

glâu'-bĕr, *s.* [Named after Glauber, a German chemist, who first artificially made glauber-salt. He died in 1668.] (For def., see etym. and compound.)

glauber-salt, glauber's-salt, *s.*

1. *Chem. & Pharm.:* A name popularly given to sodium sulphate, $Na_2SO_4{\cdot}10H_2O$.

2. *Min.:* The same as MIRABILITE (q.v.).

glâu'-bĕr-ĭte, *s.* [Eng., &c. *glauber*, and suff. *-ite* (*Min.*) (q.v.).]

Min.: A monoclinic yellow, grey, or brick-red mineral, of vitreous lustre and white streak; its hardness 2·5 to 3; its sp. gr. 2·64 to 2·85. Compos.: sulphate of soda 51·1; sulphate of lime 48·9 = 100. Occurs in New Castile in Spain, in Upper Austria, in Bavaria, in California, and in Peru. (*Dana.*)

glâu-çĕsç'-ençe, *s.* [Lat. *glau(cus)*; suff. *-escence*.] The state of being glaucescent or slightly sea-green in lustre.

glâu-çĕsç'-ent, *a.* [Lat. *glaucus*, and suff. *-escent*.] [GLAUCOUS.]

Bot.: Becoming sea-green. Not very different from glaucous (q.v.).

glâu'-çĭc, *s.* [From Lat. *glauc(ium)*, and Eng., &c., suff. *-ic*.]

Chem.: Of, belonging to, existing in, or derived from glaucium (q.v.).

*** glaucic acid,** *s.*

Chem.: The acid contained in *Glaucium flavum*, identical with fumaric acid.

glâu'-çĭn, glâu'-çĭne, *s.* [Lat. *glauc(ium)*, and Eng. &c., suff. *-ine* (*Chem.*).]

Chem.: The alkaloid contained in the leaves of *Glaucium flavum*. The leaves are macerated with acetic acid, then the juice is pressed out, boiled, filtered, and the filtrate treated with lead nitrate, which precipitates lead fumarate. The filtrate is treated with H_2S, then the glaucine is precipitated with tannin, and the precipitate decomposed by chalk. Glaucine crystallizes out of water in small crystalline scales; it is easily soluble in alcohol and ether. It forms crystalline salts.

† glâu'-çĭne, *a.* [Lat. *glauc(us)*; *-ine*.]

Bot.: The same as GLAUCOUS (q.v.).

glâu'-çĭ-ŭm, *s.* [Lat. *glaucion*; Gr. γλαύκιον (*glaukion*) = the juice of a plant, probably the Horned-poppy, *Glaucium corniculatum*.]

Bot.: A genus of Papaveraceæ. It consists of glaucous poppies with yellow juice. The flowers are large, yellow or purple, the ovary two-celled; placentas two, seeds many, testa pitted. Known species, five or six. One is British—viz., *Glaucium luteum*, the Yellow Horned-poppy. It has large, handsome flowers, and their pods from six to ten inches long. It is found on sandy shores, blooming from June till October. The Scarlet Horned-poppy, *G. phœniceum*, has been found in Norfolk, but is not truly wild.

glâu-cō, *pref.* [Lat. *glaucus*; Gr. γλαυκός (*glaukos*).]

Min., &c.: Of a glaucous colour.

glâu'-cō-dōte, glâu'-cō-dŏt, *s.* [Ger. *glaucodot*: pref. *glauco-* (q.v.), and Gr. δοτός (*dotos*) = a gift.]

Min.: An orthorhombic, greenish, tin-white mineral of metallic lustre and white streak; its hardness, 5; sp. gr., 6. Compos.: Sulphur, 19·4; arsenic, 45·5; cobalt, 23·8; iron, 11·3 = 100. Occurs in chlorite slate in the province of Huasco in Chili, also in Sweden. (*Dana*, &c.)

glâu'-cō-līte, *s.* [Ger. *glaucolith*: pref. *glauco-* (q.v.); Gr. λίθος (*lithos*) = a stone.]

Min.: A blue or greenish-grey variety of Scapolite from the region east of Lake Baikal, where it occurs in veins in granite.

glâu'-cō-mą, *s.* [Lat., from Gr. γλαύκωμα (*glaukōma*), from γλαυκός (*glaukos*) = pale blue or grey, and ὄμμα (*omma*) = the eye; from the dull grey gleam of the eye affected by the disease.]

Med.: A fault in the eye, which changes the crystalline humour into a greyish colour, without detriment of sight, and therein differs from what is commonly understood by suffusion. (*Quincy.*)

glâu-cŏm'-ą-tŭs, *a.* [Lat. *glaucoma*; Gr. γλαύκωμα (*glaukōma*) [GLAUCOMA], genit. γλαύκωματος (*glaukōmatos*), Eng. adj. suff. *-ous*.]

Med.: Of, belonging to, or having the nature of glaucoma (q.v.).

glâu'-cō-nīte, *s.* [Pref. *glauco-* (q.v.); a euphonious (?), and suff. *-ite* (*Min.*) (q.v.). Named from its green colour.]

Min.: An amorphous green opaque mineral, like earthy chlorite, with a dull or glistening lustre; its hardness, 2; sp. gr. 2·2 to 2·4. It is a hydrous silicate of iron and potash. Compos.: Silica, 49·3; alumina, 3·6; sesquioxide of iron, 22·7; protoxide of iron, 6·3; potash, 8·3, and water, 9·6. There are two varieties of it: the one the green earth of cavities in eruptive rocks, the other the green grains in the greensand formation, or anything similar. Found in many places.

glâu-cō-nĭt'-ĭc, *a.* [Eng. *glauconit(e)*; *-ic*.]

Min. & Geol.: Of or belonging to glauconite.

"*Glauconitic* grains of greensand."—*Nicholson: Palæont.*, ii. 514.

glâu'-cō-phāne, *s.* [Pref. *glauco-*, and φαίνω (*phainō*) = to make to appear.]

Min.: An orthorhombic or monoclinic mineral, translucent or opaque, occurring in six-sided prisms. Hardness, 3·5; sp. gr., 3·1; colours, lavender, blue, bluish-black, or greyish; streak, powder, greyish-blue. Compos.: Silica, 56·49; alumina, 12·23; protoxide of iron, 10·91; protoxide of manganese, 0·50; magnesia, 7·97; lime, 2·25; soda and potassa, 9·28. Occurs in the island of Syra, one of the Cyclades. (*Dana.*)

glâu-cō-pĭ'-crĭne, *s.* [Pref. *glauco-*, and *picrine* (q.v.).]

Chem.: An alkaloid occurring in the root of *Glaucium flavum*. The root is exhausted with acetic acid, then precipitated with ammonia, redissolved in acetic acid, then precipitated with a solution of oak bark, and decomposing the precipitate with chalk, is crystallized out of ether. Glaucopicrine forms granular needles, which are soluble in alcohol and in water. When heated with concentrated sulphuric acid it gives a dark grass-green colour. The salts of glaucopicrine are crystalline, and have a very bitter taste.

glâu-cō-pĭ'-næ, *s.* [Mod. Lat. *glaucopi(s)* (q.v.), and Lat. fem. pl. adj. suff. *-inæ*.]

Ornith.: The name given by Swainson to the Wattle-crows, a sub-family of Corvidæ. The bill is short; the culmen elevated and curved from the base; the upper mandible entire; the wings short, rounded; the tail lengthened, graduated, or cuneated.

glâu-cō'-pĭs, *s.* [Gr. γλαυκῶπις (*glaukōpis*) = having fierce gleaming eyes; γλαυκός (*glaukos*) [GLAUCUS], and ὄψ (*ops*) = the eye.]

Ornith.: The typical genus of the sub-family

Glaucopinæ. *Glaucopis cinerea* occurs in New Zealand.

glâu-cō-sĭd′-ĕr-īte, *s.* [Pref. *glauco-*, and Eng., &c. *siderite* (q.v.); Ger. *glaukosiderit.*]

Min.: The same as VIVIANITE (q.v.).

glâu-cō′-sĭs, *s.* [Gr. γλαύκωσις (*glaukōsis*)= blindness, produced by glaucoma (q.v.).]

Path.: (For def. see etym.).

glâu′-coŭs, *a.* [Lat. *glaucus;* Gr. γλαυκός (*glaukos*) = (1) glancing silver, (2) pale blue, grey.]

Bot.: Sea-green, dull green, passing into greyish-blue.

glâu′-cŭs, *s.* [Lat. *Glaucus;* Gr. γλαυκός (*glaukos*).] [GLAUCOUS.]

1. *Class. Myth.:* A fisherman of Anthedon, in Eubœa, who, seeing that a fish brought ashore so recovered its strength by eating a certain herb that it was able again to leap into the water, had the curiosity himself to taste the plant, which he had no sooner done than he plunged into the deep and became a sea god. (*Ovid: Metam.* vii. 233, &c.)

2. *Zool.* (*Of the form* glaucus): A genus of Nudibranchiate Gasteropods, family Æolidæ. The animal is elongated and slender, with the foot linear and channeled, the tentacles four, the gills slender, and supported on three pairs of lateral lobes. Known species, seven; floating on seaweed in the Atlantic and Pacific, their food being small sea-jellies. Mr. C. Bennett, who captured *Glaucus hexapterygius* in a towing net, in lat. 4° 26′ N., long. 19° 30′ W. describes its beauty as remarkable. The upper parts were of a brilliant red colour, the lower ones pearly white.

* **glâud′-kĭn,** *s.* A kind of gown worn in the time of Henry VIII.

glâum, *v.i.* To snatch greedily.

"To hear the thuds, and see the cluds,
O' clans frae woods, in tartan duds,
Wha *glaumed* at kingdoms three, man."
Burns: Battle of Sheriff Muir.

glâux, *s.* [Lat. *glaux;* Gr. γλαύξ (*glaux*) = (1) the owl, from its glaring eyes; (2) a plant, the Milk vetch (*Astragalus glaux* of Linnæus); γλάξ (*glax*) = the plant only, from γλαυκός (*glaukos*).] [GLAUCOUS.]

Bot.: Sea-milkwort, a genus of Primulaceæ, family Primulidæ. Flowers small, axillary sessile, white, or pink; calyx five-parted, coloured; corolla wanting; stamens five, hypogynous, alternate with the lobes of the calyx; ovary subglobose; style filiform; stigma obtuse; capsule five-valved, few seeded. *Glaux maritima* occurs in Britain on muddy seashores and estuaries, also in the salt districts of Worcester and Stafford.

* **glāve,** *s.* [GLAIVE.]

* **glāved,** *a.* [Eng. *glav(e); -ed.*] Armed with a glaive.

* **glāv′-ĕr,** *v.i. & t.* [Etym. doubtful.]

A. *Intransitive:*

1. To babble, to jabber.

"Here many, clepid filosophirs, *glaveren* dyversely."
—*Wycliffe: Select Works,* i. 181.

2. To flatter.

"A *glavering* council is as dangerous as a wheedling priest or a flattering physician."—*L'Estrange.*

B. *Trans.:* To flatter, to wheedle, to cheat.

"Ne *glaueres* her neghbor wyth gyle."
E. Eng. Allit. Poems: Pearl, 647.

* **glāv′-ĕr-ĕr,** *s.* [Eng. *glaver; -er.*] A flatterer, a wheedler, a parasite.

"These *glauerers* gone, myself to rest I laid."
Mirrour for Magistrates, p. 407.

* **glāy′-möre,** *s.* [CLAYMORE.]

* **glay-men,** * **gley-myn,** *v.t.* [A variant of CLAM (q.v.).] [CLAMMY.] To make sticky or clammy.

"*Gleymyn* or yngleymyn. *Visco, invisco.*"—*Prompt. Parv.*

* **glay-mous,** * **gley-mows,** *a.* [GLAYMEN.] Sticky, clammy.

"*Gleymous* or lymows. *Limosus, viscosus.*"—*Prompt. Parv.*

* **glay-mous-ness,** * **gley-mowse-nesse,** *s.* [Eng. *gleymous; -ness.*] Stickiness, clamminess.

"*Gleymousenesse,* or limownesse. *Limositas, viscositas.*"—*Prompt. Parv.*

glāze, * **glase,** * **glas-en,** * **glas-yn,** *v.t. & i.* [GLASS, *s.;* cf. Icel. *glæsa* = to polish; M. H. Ger. *glasen* = to glaze.]

A. *Transitive:*

1. To furnish with glass, as a window; to cover with a sheet of glass: as, To *glaze* a window or a picture.

"Francis Willeamson of Southwark, glazier, and Simon Symonds of St. Margaret's, Westminster, glazier, agreeing curiously and sufficiently to *glaze* four windows of the upper story of the church of King's College, Cambridge."—*Walpole: Anecdotes of Painting,* vol. i., ch. iv.

2. To furnish with windows of glass.

"She came to Westminster Hall, which was richely hanged with cloths of Arras and new *glazed.*"—*Hall: Hen. VIII.* (an. 25).

3. To overlay with glass, or a substance resembling glass; to cover with a vitreous substance.

"For its aptness to vitrify, and serve the potters to *glaze* their earthen vessels, the miners call pottern ore."—*Boyle: Works,* vol. i., p. 323.

4. To overlay or overspread with anything shining and transparent like glass; to make glassy.

"Sorrow's eye, *glazed* with blinding tears,
Divides one thing intire, to many objects."
Shakesp.: Richard II., ii. 2.

5. To make smooth or glossy; to polish: as, To *glaze* cloth, &c.

"As they have a method of *glazing* it, it is more durable."—*Cook: Voyages,* vol. iii., bk. ii., ch. iii.

B. *Intrans.:* To become glassy; to assume a dull, glassy appearance; to become overspread with a semi-transparent film.

"A light on Marmion's visage spread,
And fired his *glazing* eye."
Scott: Marmion, vi. 22.

glāze, *s.* [GLAZE, *v.*] A vitrifiable composition for covering earthenware or porcelain. Glaze on earthenware has several objects: (1) to render the ware impermeable to liquids, (2) To impart lustre, (3) To preserve colours and patterns. In cookery the word is applied to the white of eggs, or strong gravy or jelly boiled down to the consistency of a thin cream, and used to cover pastry, &c. with a glossy, shining coating. In painting it is used for any kind of varnish intended to preserve the picture from the effects of the atmosphere, and to add brilliancy to the colours.

"It is late in the day to discuss the chromatic range of Sir Joshua's palette, or to argue about his mixtures, and his *glazes.*"—*Pall Mall Gazette,* Jan. 3, 1883.

glaze-dew, *s.*

Bot.: Stilbum; a genus of hypomycetous fungi.

glaze-kiln, *s.*

Pottery: A kiln in which glazed biscuit-ware is placed for firing. It is analogous to the glost-oven (q.v.).

glāzed, *pa. par.* or *a.* [GLAZE, *v.*]

glazed-board, *s.* A kind of mill-board having a hard, smooth surface, to give a smooth face to the paper or fabric pressed between such boards.

* **glaz-en,** *a.* [A.S. *glæsen.*] Resembling glass; glassy, glass-like, vitreous.

glāz′-ĕr, *s.* [Eng. *glaz(e),* v.; *-er.*] One who or that which glazes: as—

(1) A cutler's or lapidary's wheel of a grade between the grinding and the polishing. It is made of discs of wood so arranged as to present the grain outwardly, that is, radially. The wooden surface is fed with emery-cake. Mahogany, oak, apple, beech, or birch are employed. Other glazers have a covering of leather or a cap of lead or tin alloy to carry the emery for grinding or glazing cutlery.

(2) A calendering or calico-smoothing wheel.

glāz′-ĭe, *a.* [Eng. *glaz(e): -ie* = *-y.*] Glittering; as smooth as glass.

"Tho' now thou's dowie, stiff, and crazy
An' thy auld hide's as white's a daisy,
I've seen thee dappl't sleek, an' *glazie.*"
Burns: Farmer to His Auld Mare Maggie.

glā′-zier (zier as **zhŭr),** *s.* [Eng. *glaz(e); -ier.*]

1. *Lit.:* One whose trade or business it is to glaze windows, picture frames, &c.; one who sets glass in windows, &c.

"The panes of glasswork are set and fastened by the *glazier.*"—*Moxon: Mechanical Exercises.*

* 2. *Fig.:* An eye.

"You're out with your *glaziers.*"—*Broome: A Jovial Crew,* act. ii.

glazier's diamond, *s.* An implement for cutting glass, consisting, as now universally made, of a handle, by which it is held between the fingers and guided, and a [illegible] swivelled at its lower end a holder [illegible] which a small diamond with one of its angles exposed is inserted.

glazier's knife, *s.* A knife [illegible] glaziers in clearing out the rebate [illegible] panes from the fillisters of sash, and [illegible] in new ones. Such knives are [illegible] hacking, stopping, and putty knives.

glŏ-bŏs'-ĭte, *s.* [Lat. *globos(us)*, and suff. *-ite* (*Min.*) (q.v.).]

Min.: A variety of Dufrenite. It is waxy-yellow to yellowish-grey, with a white streak, and is brittle. It is found in small globular concretions at the Arme Hilfe mine, near Hirschberg.

* **glō-bŏs'-ĭ-tȳ,** *s.* [Lat. *globositas*, from *globosus*.] The quality or state of being globose; sphericalness.

* **glōb'-oŭs,** *a.* [Lat. *globosus;* Fr. *globeux.*] Globose, globular, spherical, round.

"Large *globous* irons fly, or dreadful hiss,
Singeing the air." *Philips: Blenheim.*

glŏb'-ū-lar, *a.* [Lat. *globulus*, dimin. of *globus* = a globe, a sphere; Fr. *globulaire.*] Having the form or shape of a globe or sphere; globe-shaped, round, spherical.

"The form of the body is usually oblong, but when alarmed it has the power of inflating the belly to a *globular* shape of great size."—*Pennant: British Zoology. The Globe Tetrodon.*

globular-chart, *s.* A chart of the whole or some part of the surface of the earth on a globular projection (q.v.).

† **globular-minerals,** *s. pl.*

Min.: Minerals occurring in almost complete spheres.

globular-projection, *s.*

Map-making: A kind of projection proposed by Lahire, in which the eye is supposed to look from a point distant from the globe half the chord of an arc of 90°. The objection to it which has prevented its coming into use is that the great circles appear as ellipses; but withal the distortion is less than in the stereographic projections so continually employed.

globular-sailing, *s.*

Naut.: A term employed to denote the sailing from one point to another over an arc of a great circle, which is the shortest distance between such points.

glŏb-ū-lär'-ĭ-ą, *s.* [Lat. *globulus* = a little ball, a globule; dimin. of *globus* = a globe. So named from the flowers being in globose heads.]

Bot.: A genus of Selaginaceæ (*Selagids*). *Globularia Alypum*, which grows in Southern Europe, is a bitter drastic purgative and emetic; it was once supposed to be the ἀλύπον (*alupon*) of Dioscorides. *Globularia vulgaris*, also European, has similar qualities.

† **glŏb-ū-lär-ĭ-ā'-çē-æ,** *s. pl.* [Mod. Lat. *globulari(a)*, and Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: An old order of plants adopted by Lindley in his *Natural System of Botany*, but in his *Vegetable Kingdom* merged in Selaginaceæ (q.v.).

glŏb-ū-lar'-ĭ-tȳ, *s.* [Eng. *globular; -ity.*] The quality or state of being globular; sphericity.

glŏb'-ū-lar-lȳ, *adv.* [Eng. *globular; -ly.*] In a globular or spherical manner; in manner of a sphere; spherically.

glŏb'-ū-lar-nĕss, *s.* [Eng. *globular; -ness.*] The quality or state of being globular; sphericity.

glŏb'-ūle, *s.* [Fr., from Lat. *globulus*, dimin. of *globus* = a ball, a sphere.]

I. *Ordinary Language:*

1. A little ball, globe, or sphere; a particle of matter in a globular or spherical form.

"And sometimes a company of little icy *globules*, that is, misty drops, which have been suddenly frozen by the snow, will be piled one upon another, as to compose a little pyramid, terminating in one single *globule* at the top; not much unlike to a lavender spike."—*Grew: Cosmologia Sacra*, bk. i., ch. iii.

2. Any small body of globular or nearly globular form.

"These minute *globules* [the eyes of a mole] are sunk so deeply in the skull, and lie so sheltered within the velvet of its covering, as that any contraction of what may be called the eye-brows, not only closes up the apertures which lead to the eyes, but presents a cushion, as it were, to any sharp or protruding substance which might push against them."—*Paley: Natural Theology*, ch. xv.

II. *Physiol.:* The same as CORPUSCLE (q.v.).

"Blood consists of red *globules*, swimming in a thin liquor called serum: the red *globules* are elastick, and will break; the vessels which admit the smaller *globule*, cannot admit the greater without a disease."—*Arbuthnot: On Aliments.*

* **glŏb'-ū-lĕt,** *s.* [Eng. *globul(e)*, and dimin. suff. *-et.*] A little globule; a very minute globular particle.

glŏb'-ū-lĭn, *s.* [Lat. *globulus* = a little globe; a globe; suff. *-in.* (*Chem.*)]

Chem.: Crystallin, Vitellin. An albuminous substance first obtained from the crystalline lens of the eye. Globulin thus obtained is a yellowish transparent mass, which swells up and dissolves in water; the solution becomes opaline at 73°, and coagulates at 93°. Globulin is an albuminate which is soluble in a ten per cent. aqueous solution of sodium chloride, and is reprecipitated by the addition of water, by long contact with which it loses its solubility with alkaline salts, and becomes similar to coagulated albumin. Vitellin can be obtained by treating the yolks of eggs with ether, and treating the residue with chloride of sodium solution, and precipitating with water.

glŏb'-ū-līne, *s.* [GLOBULIN.]

Bot.: The name given by Turpin to the amylaceous granules so continually present in the cells of plants.

* **glŏb'-ū-lĭsm,** *s.* [Eng. *globul(e); -ism.*]

Med.: A term sometimes applied to homœopathy.

* **glŏb'-ū-lōse, glŏb'-ū-loŭs,** *a.* [Fr. *globuleux;* Sp. & Ital. *globuloso*, from Lat. *globulus* = a globule (q.v.).] Having the form of a globe or sphere; globular; spherical.

"The *globulous* part of a glass-egg of about three inches (for it wanted 1-10th) in diameter on the outside was filled with water to the bottom of the stem."—*Boyle: Works*, ii. 722.

* **glŏb'-ū-loŭs-nĕss,** *s.* [Eng. *globulous; -ness.*] The quality or state of being globulous; globularity.

"The same drops will readily adhere to gold, and loose their *globulousness* upon it."—*Boyle: Works*, ii. 664.

* **glŏb'-ū-lŭs** (*pl.* **glŏb'-ū-lī**), *s.* [Lat.]

Botany:

1. A round, deciduous shield, formed of the thallus of a lichen, and leaving a hollow when it falls off. Example, Isidium. (*De Candolle.*)

2. A kind of perithecium in some fungals.

3. The antheridium of Chara.

glō'-bŭs, *s.* [Lat. = a globe or ball.]

Anat. & Pathol.: Thus in anatomy there are a *globus major* and a *globus minor* of the epididymis, forming part of the excretory duct of the testicle. (See also the compound.)

globus-hystericus, *s.*

Pathol.: A sensation in the early stage of hysteria, as if a ball or globe first rose to the stomach, then to the chest, and finally fixed itself in the throat with the ultimate sense of suffocation. It is produced by a spasmodic action of the glottis, preventing the escape upwards of air which, being confined, distends the trachea or windpipe.

* **glōb'-ȳ,** *a.* [Eng. *glob(e); -y.*] Pertaining to or resembling a globe; spherical, round, orbicular.

"Every way do you yourselves disperse,
Till you have filled this *globy* universe
With your increase." *Drayton: Noah's Flood.*

glŏch'-ĭ-dāte, glŏ-chĭd'-ĭ-āte, *a.* [Gr. γλωχίς (*glōchis*) = any projecting point; εἶδος (*eidos*) = form, and Eng. &c. suff. *-ate.*]

Bot.: Barbed; forked at the apex, both divisions of the fork being hooked, as in the nuts of *Myosotis Lappula.*

glŏ-chĭd'-ĭ-ŏn, *s.* [Dimin. of Gr. γλωχίς (*glōchis*) = any projecting point.]

Bot.: A genus of Euphorbiaceæ, tribe Phyllantheæ. About 50 species are known. They are shrubs or small trees from India and the countries adjacent. The bark of *Glochidion nitida* is astringent.

glō'-chĭs, *s.* [Gr. γλωχίς (*glōchis*), γλώχιν (*glōchin*) = any projecting point.]

Bot.: A barb, a modification of a hair. [GLOCHIDATE.]

glŏck'-ĕr-īte, *s.* [Ger. *glockerit.* Named after the mineralogist, E. F. Glocker.]

Min.: A brown, ochre-yellow, brownish-black, pitch-black, or dull-green mineral; massive, sparry, or earthy and stalactitic. compos.: sulphuric acid, 15·9 to 15·19; sesquioxide of iron, 62·40 to 64·34; water, 20·7 to 21·7. Found near Goslar, in Hanover; also at Modum, in Norway. Called also Pitticite or Pittizite (q.v.).

* **glōde,** *pret. of v.* [GLIDE, *v.*]

* **glod-en,** *s.* [A.S. *gladen, gloden.*] The sunflower.

* **glof-fare,** *s.* [Etym. doubtful.] A glutton.

"*Glofare* or devowrare. *Devorator.*" — *Prompt. Parv.*

* **glogh,** *v.i.* [Icel. *glugga.*] To stare, to gaze.

"To *glogh* oppon gomes at gedering of folke.
Destruction of Troy, 2,920.

* **gloier,** * **gloyere,** *s.* [GLEY, *v.*] One who squints; a squint-eyed person.

"*Gloyere* or gogyleye. *Strabo.*"—*Prompt. Parv.*

glōĭ'-ŏ-carp, *s.* [Gr. γλοιός (*gloio(s)* = sticky, clammy, and καρπός (*karp(os)* = fruit.]

Bot.: The quadruple spore or tetrachocarp of some Algals. (*Treas. of Bot.*)

glōĭ'-ŏ-clăd'-ĭ-ą, *s.* [Gr. γλοιός (*gloios*) = sticky, clammy, from γλοία or γλοιά (*gloia*) = glue, and κλάδος (*klados*) = a young shoot of a tree.]

Bot.: The typical genus of the Gloiocladidæ (q.v.).

glōĭ-ŏ-clăd'-ĭ-dæ, *s. pl.* [Mod. Lat. *gloiocladi(a)*, and Lat. fem. pl. adj. suff. *-idæ.*]

Bot.: A family of Algals, order Ceramiaceæ, sub-order Cryptonemeæ. Harvey describes eight species, belonging to six genera, as British. (*Harvey: Brit. Marine Algæ.*)

* **glombe,** * **glome,** *v.i.* [GLOOM, *s.* GLUM, *a.*] To look gloomy, sullen, or morose.

"Palace-like, whereat disdain may *glome.*"
Surrey: Mean Estate.

* **glome** (1), *s.* [GLOOM, *s.*]

glōme (2), *s.* [Lat. *glomus* = a ball.]

Bot.: A roundish head of flowers.

* **glŏm'-ĕr-āte,** *v.t. & i.* [Lat. *glomeratus*, pa. par. of *glomero* = to collect into a ball; *glomus* (genit. *glomeris*) = a ball; Fr. *glomérer.*]

glŏr′-ĭ-ŏŭs-nĕss, * glor-i-ows-nesse, *s.* [Eng. *glorious; -ness.*] The quality or state of being glorious; glory.

"Among them also that are good, euerie one, as he hath in this vsed himselfe, so shal he excell other in the *gloriousnes* of his new bodye."—*Udal: 1 Corinth.* ch. xv.

glŏr′-ȳ, * gloir-e, * glor-ie, * glor-ye, *s.* [O. Fr. *glorie* (Fr. *gloire*), from Lat. *gloria*, for *cloria*, from the same root as in *cluo*; Gr. κλύω (*kluō*) = to hear; Lat. *inclytus* = renowned; Gr. κλέος (*kleos*) = glory, renown; Sp., Port., & Ital. *gloria.*]

I. *Ordinary Language:*

* 1. Originally in a more extended sense than now, including vain glory, as well as glory of a more reputable kind; arrogance, pride, haughtiness.

"In military commanders and soldiers vain-glory is an essential point; for as iron sharpens iron, so by *glory* one courage sharpeneth another."—*Bacon: Essays; Of Vain-glory.*

2. Praise, honour, or admiration or distinction paid or ascribed to any person by general consent; renown, celebrity.

"For what is *glory* but the blaze of fame,
The people's praise, if always praise unmixed?"
Milton: P. R., iii., 47.

3. Adoration or praise ascribed in worship.

"*Glory* to God in the highest."—*Luke* ii. 14.

4. A state of splendour; greatness, grandeur, or magnificence.

"Solomon in all his *glory* was not arrayed like one of these."—*Matthew* vi. 29.

5. The felicity of heaven prepared for those who love God.

"Thou shalt guide me with thy counsel, and afterwards receive me into thy *glory*."—*Psalm* lxxiii. 24.

* 6. Lustre, splendour, brilliancy.

"From opening skies may streaming *glories* shine,
And saints embrace thee with a love like mine."
Pope: Eloise to Abelard, 342.

* 7. A noble or praiseworthy pride.

"The success of those wars was too notable to be unknown to your ears, to which all worthy fame hath *glory* to come unto."—*Sidney.*

8. That which makes glorious, distinguished, or renowned; the distinguishing ornament or honour; that of which a person, place, or nation is or may be proud.

"Increasing London, Babylon of old
Not more the *glory* of the earth than she."
Cowper: Task, i. 723.

* 9. A glorious, honourable, or worthy act; a source of honour.

"Think it no *glory* to swell in tyrannye."—*Sidney: Arcadia.*

II. *Technically:*

1. *Art:* Properly, a combination of the nimbus and aureola, but commonly taken as the same as nimbus (q.v.).

2. *Pyrotech.:* A cluster of large fixed suns. [Fixed-sun.]

¶ Crabb thus discriminates between *glory* and *honour*: "*Glory* impels to extraordinary efforts and to great undertakings. *Honour* induces to a discharge of one's duty. Excellence in the attainment, and success in the exploit, bring *glory*; a faithful exercise of one's talents reflects *honour*. *Glory* is connected with everything which has a peculiar public interest; *honour* is more properly obtained within a private circle. *Glory* is not confined to the nation or life of the individual by whom it is sought; it spreads over all the earth, and descends to the latest posterity; *honour* is limited to those who are connected with the subject of it, and eye-witnesses to his actions. *Glory* is attainable but by few, and may be an object of indifference to any one; *honour* is more or less within the reach of all, and must be disregarded by no one. A thirst for *glory* is seldom indulged but at the expense of others; a love of *honour* can never be indulged but to the advantage of others." (*Crabb: Eng. Synon.*)

glory-hole, *s.*

Glass-manuf.: An opening in the wall of a glass-furnace, exposing the brilliant white of the interior.

glory-crowned, *s.* Having the head encircled with a glory.

"His own vast shadow *glory-crowned*."
Tennyson: In Memoriam, xcvi.

glory-pea, *s.*

Bot.. The genus Clianthus.

* **glory-smitten,** *s.* Smitten or seized with a thirst for glory.

glory-tree, *s.*

Bot.: The genus Clerodendron.

glŏr′-ȳ, *v.i. & t.* [O. Fr. *glorier*, from Lat. *glorior* = to boast; Sp. & Port. *gloriar*; Ital. *gloriare.*] [Glory, *s.*]

A. *Intransitive:*

1. To boast; to feel pride.

"This title of Freeholder is what I most *glory* in, and what most effectually calls to my mind the happiness of that government under which I live."—*Addison: Freeholder.*

* 2. To exult with joy; to rejoice.

"Both *glorying* to have scapt the Stygian flood."
Milton: P. L., i. 239.

* B. *Trans.:* To make glorious; to glorify; to give glory to.

"The troop
That *gloried* Venus."
Greene: Looking-glass, p. 118.

¶ Crabb thus discriminates between to *glory* and to *boast*: "To *glory* is to hold as one's *glory*. To *boast* is to set forth to one's advantage. To *glory* is more particularly the act of the mind, the indulgence of the internal sentiment: to *boast* denotes rather the expression of the sentiment. To *glory* is applied only to matters of moment; *boast* is rather suitable to trifling points. *Glory* is but seldom used in a bad sense, and *boast* still seldomer in a good sense." (*Crabb: Eng. Synon.*)

* **glŏr′-ȳ-lĕss,** *a.* [Eng. *glory; -less.*] Without glory; bereft of glory.

"Soulless, *gloryless*, and desperate."
Peele: Battle of Alcazar, ii. 3.

* **glor-y-yn,** *v.t.* [Etym. doubtful.] To defile; to make dirty; to stain.

"*Glorygn* or wythe onclene thynge befoylyn. *Maculo, deturpo.*"—*Prompt. Parv.*

* **glōse** (1), *s.* [Gloze, *s.*]

* **glōse,** *v.i.* [Gloze, *v.*]

* **glōs′-ĕr,** *s.* [Glosser.]

glŏss (1), * **glōse** (2), *s.* [O. Fr. *glose*, from Lat. *glossa* = a word requiring explanation, from Gr. γλῶσσα (*glōssa*) = the tongue, a difficult word; Icel. *glósa*; Sw. *glosa*; Dan. *glose*; Dut. *glos*; Sp. & Ital. *glosa*; Port. *glossa.*] [Gloze.]

1. An explanatory note or remark on the margin or between the lines of a book, as an equivalent for foreign or strange words. (Originally inserted by the copyist of a manuscript, to make the meaning more plain.)

2. A comment, note, or explanation on a point of difficulty in a work, especially in one written in a foreign tongue; a scholium.

"No commentator's tedious *gloss*."
Cowper: A Manual.

* 3. A false or specious interpretation or explanation.

"Thou hast made many *glose* with thy false talkyng."
Towneley Mysteries, p. 209.

glŏss (2), *s.* [Icel. *glossi* = a blaze; Sw. dial. *gläsa* = a glowing, *glossa* = to glow, to shine; M. H. Ger. *glosen* = to glow, *glose* = a glow, a gleam. The word has been confused, and its meaning has been partially affected by the confusion with Gloss (1), *s.*]

1. *Lit.:* The brightness or lustre proceeding from a smooth, polished surface; polish, sheen, glossiness.

"Weeds that the wind did toss
The virgins wore: the youths woven coats, that cast a faint dim *gloss*
Like that of oil."
Chapman: Homer; Iliad.

2. *Fig.:* A specious or fair outward appearance; external show pleasing to the eye.

"There is a sort of *gloss* upon ingenious falsehoods that dazzles the imagination, but which neither belongs to nor becomes the sober aspect of truth."—*Burke: Vindication of National Society* (Pref.).

* ¶ *To set a gloss on anything:* To give it a specious appearance. (*Shakesp.:* 1 *Henry VI.*, iv. 1.)

glŏss (1), * **glose,** * **glos-en,** * **glosse,** * **glos-yn,** *v. i. & t.* [O.Fr. *gloser*; from Low Lat. *glosso*, from *glossa* = a gloss; Icel. *glosa* = to explain; Dut. *glossen*; Sp. *glosar*; Port. *glossar*; Ital. *glossare.*] [Gloss (1), *s.*]

A. *Transitive:*

1. To explain by note, gloss, or comment; to comment on so as to render clear or plain; to annotate.

"This tale nedeth nought be *glosed*,
For it is openliche shewed."
Gower iii., 219.

* 2. To flatter, to wheedle.

"So wel he couthe me *glose*
Whan that he wold haue my bele chose."
Chaucer: C. T., 6,091.

B. *Intransitive:*

1. To comment; to write or make comments or explanatory remarks.

"But no man can *glosse* upon this text after that manner, for the prophet says, No shepherd shall pitch his fold there, nor shall any man pass through it for ever."—*H. More: Defence of the Philosophic Cabbala*, ch. iii.

* 2. To flatter, to wheedle.

"Who that couthe *glose* softe
And flater, such he set aloffte
In great estate."
Gower, iii., 170.

* 3. To make sly remarks.

"Her equals first observed her growing zeal,
And laughing *glossed* that Abra served so well."
Prior: Solomon, ii. 365.

glŏss (2), *v.t.* [Gloss (2), *s.*]

I. *Lit.:* To give a gloss or superficial lustre to; to make glossy or lustrous: as, To *gloss* cloth or paper.

II. *Figuratively:*

1. To give a fair or specious appearance to; to render specious or plausible.

"Do I not reason wholly on your conduct?
You have the art to *gloss* the foulest cause."
Phillips.

2. To palliate by specious representation.

"Though every tongue should join in *glossing* over and even justifying all or any of those crimes."—*Porteus*, vol. ii., ser. 16.

¶ (1) In the figurative senses there is evidently a confusion with Gloss (1), *v.*

(2) Crabb thus discriminates between to *gloss*, to *varnish*, and to *palliate*: "*Gloss* and *varnish* are figurative terms, which borrow their signification from the act of rendering the outer surface of any physical object shining. To *gloss* is to give a *gloss* or brightness to any thing by means of friction, as in the case of japan or mahogany: to *varnish* is to give an artificial *gloss*, by means of applying a foreign substance. Hence in the figurative use of the terms, to *gloss* is to put the best face upon a thing by various little distortions and artifices; but to *varnish* is to do the same thing by means of direct falsehood: to *palliate* requires still less artifice than either." (*Crabb: Eng. Synon.*)

glŏs-sā′-gra, *s.* [Gr. γλῶσσα (*glōssa*) = the tongue, and ἄγρα (*agra*) = a catching.]

Pathol.: A rheumatic pain in the tongue.

glŏss-ăn′-thrăx, *s.* [Gr. γλῶσσα (*glōssa*) = the tongue, and ἄνθραξ (*anthrax*) = coal, charcoal; Fr. *glossanthrax.*]

Vet.: A disease affecting herbivorous animals, especially cattle and horses. It is characterized by dark-coloured carbuncles on the tongue.

glŏss-ăr′-ĭ-ăl, *a.* [Eng. *glossary; -al.*] Of or pertaining to a glossary; containing, or of the nature of a glossary.

"In the *glossarial* index of former editions, the reader has merely been presented with a long list of words, and references to the passages where they occur."—*Boswell: Advertisement to Shakespeare.*

glŏss′-ą-rĭst, *s.* [Eng. *glossar(y); -ist.*]

1. One who glosses or comments upon an author.

2. A writer or compiler of a glossary.

"I am quite aware that the *glossarists* are never tired of printing."—*Notes & Queries*, July 25, 1853, p. 74.

glŏss'-ą-rỹ, *s.* [Lat. *glossarium*, from *glossa* = a difficult word requiring explanation; Gr. γλῶσσα (*glōssa*) = the tongue; a difficult word; Fr. *glossaire;* Sp. *glosario;* Ital. *glossario.*] A vocabulary or dictionary of glosses or explanations of words obsolete or rare, or occurring only in works of a special class, as technical terms, or of provincial dialectal forms or words.

"He spells them true by intuition's light,
And needs no *glossary* to set him right."
Cowper: Needless Alarm.

¶ For the difference between *glossary* and *dictionary*, see DICTIONARY.

***glŏs-sā'-tŏr,** *s.* [Fr. *glossateur.*] A writer or compiler of glosses; a commentator.

"This is the full state of this affair, in the age when Seneca, who was the *glossator*, lived."—*Bp. Taylor: Dissuasive from Popery*, pt. ii., bk. i., § 11.

glŏs-sĕ-cŏl'-līte, *s.* [Gr. γλῶσσα (*glōssa*) = the tongue; κόλλα (*kolla*) = glue; suff. *-ite* (*Min.*) (q.v.).]

Min.: A variety of Halloysite. It is milk-white in colour, and earthy. On the edges it is translucent. It is found in a siliceous Silurian rock in Rising Fawn, Dade County, Georgia. (*Dana.*)

glŏss'-ĕr (1), *s.* [Eng. *gloss* (1), v.; *-er.*] A writer of glosses or comments; a commentator.

"It was not easy for the king's *glossers* to interpret them to their own mind, whilst the bishops were at hand to refute and rectify their comments."—*Burd: Constitution of the English Government.*

glŏss'-ĕr (2), *s.* [Eng. *gloss* (2), v.; *-er.*] One who polishes or gives a lustre to anything.

glŏss'-ĭc, *s.* [Gr. γλῶσσα (*glōssa*) = a tongue.] The name given by its inventor, Mr. A. J. Ellis, F.R.S., to a system of phonetic spelling of the English language, intended to be used concurrently with the existing system.

glŏss'-ĭ-lỹ, *adv.* [Eng. *glossy; -ly.*] In a glossy manner.

glŏss'-ĭ-nĕss, *s.* [Eng. *glossy; -ness.*] The quality or state of being glossy; superficial lustre.

"Their surfaces had a smoothness and *glossiness* much surpassing whatever I had observed in marine or common salt."—*Boyle: Works*, vi. 408.

glŏss'-ĭng, *pr. par., a., & s.* [GLOSS (2), *v.*]

A. & B. *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* An operation upon silk thread by which it is moistened with steam and stretched to develope a gloss.

***glŏss'-ĭst,** *s.* [Eng. *gloss* (1), *s.; -ist.*] A writer of glosses or comments; a commentator.

"It was raised by inconsiderate *glossists* from the mistake of this text."—*Milton: Tetrachordon.*

glŏs-sī'-tĭs, *s.* [Gr. γλῶσσα (*glōssa*) = the tongue; suff. *-itis* = denoting inflammation.]

Pathol.: Inflammation of the tongue. Since mercury began to be less used for salivation, idiopathic glossitis has become rare. When it occurs, it is generally as a symptom of some other disease. The tongue when inflamed often becomes too large for the mouth.

***glŏss'-lỹ,** *adv.* [Eng. *gloss* (2), *s.; -ly.*] Having a glossy or lustrous appearance; glossy.

glŏs-sō-, *pref.* [Gr. γλῶσσα (*glōssa*) = the tongue.] Belonging to or resembling the tongue.

glosso-epiglottic, *a.*

Anat.: Of or belonging to both the epiglottis and the tongue. Thus there are glosso-pharyngeal folds or frænula.

glosso-pharyngeal, *a.*
